Courseware Workbook
“A How To Course - Pragmatic and Actionable”

Implementing IT Governance:
A Practical Guide to World Class IT Management Using Current & Emerging Best Practices
“How to Align, Plan, Implement and Govern Information Technology Resources for Improved Competitive Advantage, Profitability and Control in Global Enterprises”

Presented to:
TCMG 533/MGMT – IT Strategy & Governance
Spring 2008

Dr. Gad J. Selig, PMP, COP
Managing Partner, GPS Group, Inc.,
Director, MS in Technology Management & Dual Graduate Business/Engineering Degree Programs
Cell: (203) 521-9664
E-mail: gjselig@optonline.net

Contents

Preface
Objectives of Workshop
Benefits of Workshop
How to Get the Most Out of the Workshop
1.0 Executive Summary
Today’s Business Challenges
Scope and Definition of Enterprise Governance
Enterprise versus Business versus IT Governance
The Board’s Role in IT Governance
Major Challenges and Pressures for IT
Board and Executive Questions for IT
Definition and Purpose of IT Governance
Who Benefits from Effective and Sustainable IT Governance?
Key Components of Managing Large Scale Enterprise Change Successfully
Value Propositions from Best-in-Class Companies on Governance
Successful IT Governance is Built on Three Critical Pillars – Leadership & Organization, Scalable Processes and Enabling Technology
Results of Ineffective IT Governance Can Be Devastating
Linking the CEO Role to Achieving Business Growth, Improving Profitability and Creating an Effective Governance Environment
How Much Governance is Required? When is Enough, Enough?
Key IT Governance Strategy and Resource Decisions
Integrated IT Governance Framework and Roadmap
Key Roles and Responsibilities
Key Work Breakdown Areas to Manage the IT Governance Initiative
IT Governance – Decision Rights
Executive Steering Committee Charter - Illustrative
IT/Business Steering and Governance Boards and Roles
Business/IT Demand Management – Classifications
Strategic IT Investment Alternatives
Business/IT Governance - Balanced Score Card
Essential Competencies for Successful IT Governance
Sarbanes-Oxley Act, Compliance and Implications – Increasing Important and Complex
Select Technology and Process Solution Enablers to Improve IT Governance
Avoiding Implementation Pitfalls
Key Leadership Principles for Creating & Sustaining a Successful IT Governance Culture & Environment
Steps in Making IT Governance Real
A First Step - Assess Current Maturity of IT Governance
IT Governance - Maturity Model Levels
IT Governance - Current and Future State Transformation Flow
Future State of IT Governance – A Blueprint Concept
Case Study - Consumer Products Company
Summary
2.0 Integrated IT Governance Framework and Roadmap and Related Current and Emerging Industry Best Practices

Objectives
Benefits of Using an Integrated IT Governance Framework Leveraging Best Practices Models
Integrated IT Governance Framework and Roadmap
Select Examples of Business/IT Strategy and Governance Reference Models, Frameworks and Standards
(e.g. COBIT 4.0, ISO 17799, 20000, 27001 & 9001, PMBOK, OPM3, QFD, CMMI, ITIL, Prince2, PMMM, Kano, ITIM, 6 Sigma, Lean, Baldridge, ITsqc, IAOPT, ETA and others)

Summary

3.0 Business/IT Alignment and Strategic Planning Excellence

Objectives
The Board’s Role in Driving Business/IT Alignment
Views of IT Value Differ
Principles for Aligning IT to the Business More Effectively
IT/Business Alignment Maturity Model
IT Investment – Key Value Proposition Questions
High Level Flow - Business/IT Planning, Investment, Execution and Evaluation
Business and IT Plan Integration Flow
Business Strategy and Plan Development Framework
IT Strategic Planning Cycle and Outlines
IT Strategy and Plan Development Framework
Key Practices for Effective IT/Business Alignment
IT/Business Alignment Triangle and Flow
Company “X” Strategic Planning Process Stages and Timetable + Plan Templates
The Five Stages of IT Investment Management Maturity
Strategic IT Investment Portfolio Alternatives
IT Engagement (VOC Relationship) Model and Roles
Case Study – Financial Services organization

Summary

4.0 Program/Project Management (PM) Excellence

Objectives
Value Propositions of PM from Leading Organizations
PM is Complex & Requires Multiple Competencies
Major Causes of Program/Project Failures
The Cost of Failure
Principles for Achieving Excellence in Program/Project Management
Essential Skills for PM
Key PM Definitions
PM Maturity (PMMM) Model
High Level Flow – From IT/Business Alignment, Portfolio Management, PM/SDLC to Steady State Operations

Summary

4.0 Program/Project Management (PM) Excellence (Continued)

Program/Project Life Cycle Phases and Components – An Overview
Demand Management Requests
IT Request (Demand Management) Gate Process Flow, Select Decision Criteria & Checklists
Program/Project Type/Scale Matrix
Fast Track versus Complex (Full Risk Mitigation) Initiatives
PM Lifecycle Phases and Related Templates
Request Template - Minimum Required Information
Program/Project Governance and Escalation Hierarchy
PM Key Performance Indicators – Mandatory and Discretionary
Program Management Office (PMO) – Roles and Areas of Focus
Sample PM Organization and Responsibilities – Major Multinational Organization
Case Study – Federal Government Organization

Summary

5.0 IT Service Management (ITSM) & ITIL (IT Infrastructure Library) Excellence

Objectives
Principles for Achieving IT Service Management and Delivery Excellence
Top Concerns of CIOs
Benefits of IT Service Management and Delivery
What is ITIL and Why is it Different?
ITIL Certifications – v2
ISO/IEC 20000 – IT Service Management
The IT Service Management Lifecycle (ITIL – v3)
ITIL v3 Service Lifecycle, Related Processes and Activities Table
ITIL v3 – Qualifications and Certifications
ITIL Value Proposition – Select Leading Company Examples
Advantages of ITIL to Customers, Constituents and the IT Organizations
Potential Issues with ITIL
ITIL Frameworks
Summary of ITIL Service Management Processes & Functions – v2
Service Support Processes - Service Desk; Incident Management; Problem Management; Configuration Management; Change Management; Release management
Service Delivery Processes: Security Management; Service Level Management; Capacity Management; Availability Management;
IT Service Continuity (ITSCM) Management; IT Financial Management
Summary of New or Modified ITIL Service Management Processes and Functions – v3

Summary

Contents (cont.)
5.0 IT Service Management (ITSM) Excellence (Continued)
   - Steps in Making ITIL Real
   - ITIL Process Area Maturity Level Ranking Matrix
   - Select ITSM and ITIL Metrics
   - Most ITIL Initiatives Start with Service Desk and Incident Management
   - Enabling Technology Attributes for ITIL
   - Case Study – Global Manufacturing Company
   - Summary

6.0 Strategic Sourcing (Outsourcing) and Vendor Management Excellence
   - Objectives
   - The Information Technology Balancing Dilemma
   - The Outsourcing Decision-Making Scorecard
   - Outsourcing Motivations - Build versus Buy Criteria
   - Major Outsourcing Trends and Challenges
   - Outsourcing Vendor Views
   - Customer Wish List
   - Customer Issues and Challenges
   - Outsourcing Can Be Complicated
   - Differences Between Domestic and Off Shore Deals
   - Empowering Executives to Outsource
   - Vendor Selection Process Flow
   - Key Vendor Evaluation Criteria
   - Vendor Governance Process and Roles
   - Key Contract Negotiation Pointers
   - Do’s and Don’ts of Outsourcing
   - Proctor and Gamble In-sourcing and Outsourcing Mix
   - Summary
   - Steps in Vendor/Outsourcing Selection, Negotiations and Management
   - Case Study
   - Summary

7.0 Performance Management, Management Controls, Risk Management & Enabling Technologies
   - Objectives
   - Principles for Achieving Performance Management Excellence
   - What Key Performance Indicators Should be Tracked?
   - Critical Success Factors (CSFs), Key Performance Indicators (KPIs) and Historic/Predictive Attributes
   - Balanced Scorecard and Key Performance indicators
   - Governance Calendar

7.0 Performance Management, Management Controls, Risk Management & Enabling Technologies (cont.)
   - Select Examples of KPIs in Support of IT Governance Components
   - Investment Oversight Board
   - COBIT and Key Management Controls
   - Risk Assessment, Management & Mitigation
   - Enabling Technologies to Improve IT Governance
   - Case Study – Leading Software Company
   - Summary

8.0 Lessons Learned, Critical Success Factors & Next Steps
   - Migration Plan for Making IT Governance Real
   - Lessons Learned
   - Critical Success Factors
   - Personal Action Plan & Next Steps

9.0 Select References

10.0 Appendix
   - 1. Framework for Managing Accelerated Change and Transformation
   - 2. Sarbanes-Oxley Template for a Manufacturing Company
   - 3. Select References to Business/IT Strategy and Governance Models/ Frameworks
The contents of this workbook are based on principles and concepts described in current periodicals, books, research papers, company case studies and industry associations, as well as lessons learned from over 35 years of industry, consulting and education experience.

It leverages and integrates current and emerging industry and government best practices, standards and guidelines such as BCG, COBIT, COSO, ITIM, Six Sigma, PMBOK, Prince2, Porter, Treacy, Hamel, Weill, ITGI, PMMM, CMMI, ITIL, KANO, IAOP, ITqmc, select ISO standards and others. It is intended to be pragmatic, actionable and useable on Monday morning.

The material provides a guideline for organizations to plan, develop, deploy and sustain the IT Governance Framework and Roadmap (and its components) with the following major objectives:

- Effective strategic alignment of IT with the business or organization
- Assure the successful planning, deployment and integration of IT initiatives and services in collaboration with the business
- Establish and/or improve accountability of all constituents
- Ensure value delivery of IT
- Improve IT services, productivity, reliability, responsiveness, competency and maturity
- Measure the contributions of IT to the business by linking critical success factors to key performance indicators (KPIs)
- Facilitate regulatory compliance, documentation and reporting and lower audit costs

The material represents a living document that will undergo continuous improvement and revisions over time as new strategy and governance processes, standards, techniques, tools and metrics are developed and as gaps in the current standards and guidelines are filled. While every reasonable effort has been taken to assure the highest accuracy and quality of the material, errors or omissions may exist.

All rights reserved. The reproductions or utilization of this workbook, in whole or in part, in any form by an electronic, mechanical or other means, such as xerography, photocopying and recording, or in any information storage or retrieval system, is forbidden without the permission of the publisher, Gad J. Selig, Managing Partner of GPS Group, Inc. We welcome suggestions to improve and update the material.
Select Executive, Management and Professional Briefings and Workshops

(All are grounded in current and emerging industry best practices and can be tailored in time, contents and experience levels of the audience)

• Winning Business/IT Alignment, Strategy, Execution and Governance

• Enterprise Program and Project Management (Optional: 2 Day PMP Certification Exam Prep)

• Superior IT Service Management  (including ITIL - IT Infrastructure Library)

• Managing Accelerating Change and Innovation

• Strategic Sourcing, Outsourcing and Vendor Management

• Strategic Marketing, Demand Creation and Revenue Growth

• Creating and Sustaining World Class Leaders and High Performance Global Virtual and Traditional Teams

• New Product Development, Venture Creation and Commercialization

• Business Strategy and Plan Development and Implementation
Meet the Instructor

Dr. Gad J. Selig, PMP, COP  
Managing Partner, GPS Group Inc. &  
Director, MS Technology Management and Dual Graduate Business Degree Programs,  
University of Bridgeport  
E-mail: gjselig@optonline.net  
www.gpsgroupinc.com

• 30+ years of diversified domestic/international executive, management and consulting experience with Fortune 500 and smaller organizations in general management, marketing, planning, operations, program and project management, strategic sourcing, product development and Commercialization and CIO.

• Dr. Selig is the Managing Partner of GPS Group, Inc. a marketing and technology consulting and management development firm. He is also the Director, MS Technology and Dual Graduate Business Degree Programs at the University of Bridgeport. He is a Senior Consultant to The CIO Group and TAC.

• Select clients include: ATMI, Air Products and Chemicals, Bank General of Luxembourg, Bristol-Myers Squibb, Cigna, Columbia University Graduate School of Business, Connecticut Hospital Association, Cendant, Computer Associates, ESPN, GE Aircraft Engines, GSA’s Federal Technology Services, Fuji Film, IAOP, Johnson and Johnson, JPMorgan Chase, KeySpan Energy, Lehman Brothers, Nextel, Purdue Pharma, Starwood Hotels and Resorts, Syracuse University, and others.

• Dr. Selig worked for the Marketing Corporation of America, Verizon, Continental Group, Standard Kollsman Industries, CBS and AT&T in executive, management and professional positions.

• He is currently writing his third book and has authored over 50 published articles in journals and conference proceedings. He is a dynamic and popular speaker at industry and corporate conferences. He holds a Top Secret Clearance with the Federal Government.

• Dr. Selig has been a Board member of Telco Research, BIS Group, LTD. and AGS, Inc. Earned degrees from City, Columbia and Pace Universities in Economics, Engineering and Business.

Preface

Objectives

• Understand the issues, challenges and growing importance of IT governance
• Develop, deploy and sustain an effective IT governance policy, processes, tools and metrics
• Align IT investments more effectively with business plans & strategies
• Manage, evaluate, estimate, prioritize, fund, measure, assign and track requests for IT investments and services in a more consistent, repeatable and flexible manner
• Allocate IT resources to highest business value add activities (e.g. portfolio investment management)
• Establish and/or improve accountability (clearly define roles and responsibilities)
• Improve organizational performance, responsiveness, reliability, maturity, staff development and compliance
• Provide an overview of select current and emerging industry best practices & standards
Benefits of the Workshop

- Apply the lessons learned from this workshop to plan, manage, deploy and sustain an effective and robust IT Governance framework and its components
- Be exposed to select current and emerging industry and government best practices and select case studies
- Sharpen and refine your knowledge, competencies and increase your value
- Reduce stress for yourself and other stakeholders
- Understand your role in the IT Governance process, regardless of whether you are a Board member, CEO, CIO, CTO, manager or professional
- Help you achieve greater success in your work, regardless of whether you…
  - Know a lot about IT Governance
  - Know very little about IT Governance
  - Are responsible for developing, enforcing and/improving some aspect of IT Governance
- Answer as many questions as the allotted time will allow

How to Get the Most Out of This Workshop

- Keep an open mind
- Respect other’s opinions and views - each of you has experiences and/or facts to share
- Participate & contribute your experiences
- Put aside other work or issues
- Please shut off cell phones and/or pagers
- All questions are welcome
- Relax and have fun
1.0 Executive Summary

“Firms with superior IT governance had 20% higher profits than firms with poor Governance given the same strategic objectives.”

Dr. Peter Weill, Director of the Center for Information Research, MIT (Based on a recent study of 250 enterprises in 23 countries)

“There is nothing more difficult to carry out, nor more doubtful of success or dangerous to handle than to initiate a new order of things.”

Nicolo Machiavelli, The Prince

Today’s Business Challenges - The pace of change is accelerating
“Enterprise governance constitutes the entire accountability framework of the organization.”

International Federation of Accountants (IFAC)

Definition – Enterprise Governance

Enterprise governance is the set of responsibilities and practices exercised by the Board and Executive Management with the goal of providing strategic direction, ensuring that plans and objectives are achieved, assessing that risks are proactively managed and assuring that the enterprise’s resources are used responsibly.”

"IT Governance is the responsibility of the Board of Directors and executive management.

It is an integral part of enterprise governance and consists of the leadership and organizational structures and processes that ensure that the organization’s IT sustains and extends the organizations strategies and objectives."

Major Challenges for IT

Major IT challenges must be dealt with as part of an IT governance process

- Total Cost of Ownership & IT Value Proposition: ROI based decisions for new investments based on IT enabled business changes, reducing costs, competitive differentiation and keeping the lights on; Do more with less; Re-invest savings
- SOX/ Other Compliance: Sustainable Compliance Model
- Architecture & Applications: Implement scaleable, secure, open architecture & standardized solutions
- Security: Impenetrable, scaleable and cost-effective security policies, processes & controls
- Asset Optimization: Optimal infrastructure and other asset utilization: Physical Assets, Human Capital & Strategic Sourcing
- On Demand Management & IT Investment: Manage on demand requests in a consistent, manner
- Business/Competitive Intelligence: Data Strategy: Transform raw data to knowledge & intelligence
Executive Summary

Changing Role of CIO and IT Community at IBM*

Current Role  Transition  Future Role

Presides Over IT  Knows the Business
Cost Justification  Value Realization
Infrastructure Centric  Process Centric Transformation
Back Office  Outside In
IT Project Milestones  Business Benefit Delivered
Standardization  Role Based Enablement (Flexible & Scalable)
Stove Piped  Globally Integrated

* Brian Truskowski, VP and CIO, IBM, Presentation on “Changing Role of CIO at IBM,” at SIM Westchester-Fairfield County Chapter, 5/18/06

Executive Summary

Pressures on IT – Enable business growth, support business operating environment and continuity and facilitate compliance

Delivered by:
- Process enabled best practices (PM, CMMI, ITIL, COBIT, SDLC)
- Standardization
- Certification

Business – The Bottom Line:
- Cut costs
- Grow profits
- Improve governance
- Grow business

Impacts on IT:
- Higher customer demands & expectations
- Staff/Budget reductions
- Outsourcing
- Formal Investment Process

IT: Do More with Less:
- Maximize business value proposition
- Increase IT effectiveness and service levels

Getting Started – Board and Executive Questions for IT

- Does the IT strategy align with the business strategy?
- Is the IT investment justified based on its contributions to the business?
- How likely will IT meet or exceed its plans, objectives and initiatives?
- Is IT being managed prudent, effectively? How is that measured?
- How is IT delivering value?
- Is IT developing and maintaining constructive relationships with customers, vendors and others?
- Is IT delivering projects and services on time, within scope, within budget and with high quality?
- Is IT staffed adequately, with the right skills and competencies?
- Is IT compliant?
- How does IT management and operations compare to other best practice organizations?
- How is IT managing and planning for contingencies, disasters, security, and back-up?
- How is IT measuring its performance? What key performance measures?
- How effectively is IT communicating its progress and problems to its constituents?
- What controls and documentation have been instituted in IT? Are they sufficient?
- Does the Board review and possibly approve the IT strategy?
- Is a risk management policy, assessment and mitigation practice followed for IT?

Definition and Purpose of Governance

**Definition of Governance:**

Governance formalizes and clarifies oversight, accountability and decision rights. It is a collection of management, planning and performance review policies, practices and processes with associated decision rights, which establish controls and performance metrics over investments, plans, commitments and compliance with laws and organizational policies.

**Purpose of IT Governance:**

- **Align IT investments and priorities more closely with the business**
- Manage, evaluate, prioritize, fund, measure and monitor requests for IT services and the resulting work and deliverables, **in a more consistent and repeatable manner** that optimize returns to the business
- Responsible utilization of resources and assets
- Establish and clarifies accountability and decision rights (clearly defines roles and authority)
- Ensures that IT delivers on its plans, budgets and commitments
- Manages risks, change and contingencies proactively
- Improve IT organizational performance, compliance, maturity and staff development
- Improve VOC, demand management and overall customer and constituent responsiveness
Executive Summary

Who Benefits from More Effective and Sustainable IT Governance? ALL!

• What Executives Get
  – Business improvements that result from knowledgeable participation in IT decision-making from an enterprise perspective
  – Ensures that key IT investments support the business and provide optimum returns to the business
  – Ensures compliance with laws regulations
• What Mid-Level Business Managers Get
  – Convinces senior business managers that their combined business-IT resources are being managed effectively
  – Helps to communicate with peers in IT to ensure that business services for which they are responsible will meet commitments
• What Senior IT Managers Get
  – Obtains sponsorship and support and a clear focus on important strategic and operational initiatives
  – Improves customer relationships by delivering results in a more predictable and consistent manner, with the involvement of the customer
• What Program/Project and Operations Managers Get
  – Helps in resolving issues, review progress and, enable faster decisions
• What Everyone Gets
  – Facilitates communications about how IT contributes to the business
  – Improves coordination, cooperation, communications and synergy across the organization
  – Less stress

Key Components of Managing Large Scale Change Successfully

• Engage the Top and Lead the Change
  - Create the “Value Proposition” & Market the Case for Change
  - Committed Leadership
  - Develop a Plan and Ensure Consequence Management

• Cascade Down and Across the Organization & Break Down Barriers/Silos
  - Create Cross-Functional and Global Teams (where appropriate)
  - Compete on “Speed”
  - Ensure a Performance Driven Approach

• Mobilize the Organization and Create Ownership
  - Role Out Change Initiative
  - Measure Results of Change (Pre-Change versus Post-Change Baselines)
  - Embrace Continuous Learning, Knowledge and Best Practice Sharing

• Attributes of Effective Change Teams and Agents
  - Strong and focused Leader
  - Credibility and Authority (Charter) to Lead the Initiative
  - “Chutzpah”, Persistent and Change Zealots
  - Ability to Demonstrate and Communicate “Early Wins” to build the momentum
  - Create a Sense of Urgency and Avoid Stagnation
  - Knock Obstacles Out of the Way, Diplomatically or Otherwise
Value Propositions for Governance from Best-in-Class Companies*

- **Lowers cost** of operations by accomplishing more work consistently in less time and with fewer resources without sacrificing quality (GM)
- Provides **better control & more consistent approach** to governance, prioritization, development funding and operations (Kodak)
- Develops a **better working relationship and communications with the customer** (Nortel)
- Provides for a **consistent process for more effectively tracking progress**, solving problems, escalating issues and gate reviews (Cigna)
- Aligns initiatives and investments more directly with **business strategy** (GE)
- Improves governance, communications, visibility & risk mitigation for all constituents (Robbins Gioia)
- **Facilitates business & regulatory compliance** with documentation & traceability as evidence (Purdue Pharma)
- Increases our **customer satisfaction** by listening proactively to the customers (Lucent)
- Reuse of consistent & repeatable processes helps to **reduce time and costs & speeds up higher quality deliverables** (IBM)

* Based on primary & secondary current and emerging best practice research conducted by GPS Group, Inc.

“Firms with superior IT governance had 20% higher profits than firms with poor Governance given the same strategic objectives.” Dr. Peter Weill, Director of the Center for Information Research, MIT (Based on a recent study of 250 enterprises in 23 countries)

---

**Successful IT Governance Is Built on Three Critical Pillars**

- **Leadership, Organization, Decision Rights and Metrics** – defines the organization structure, roles and responsibilities, decision rights, a shared vision and meaningful metrics.

- **Flexible and Scalable Processes** – the IT governance model places heavy emphasis on the importance of process implementation and improvement.

- **Enabling Technology** – Leverage leading tools that support the key IT governance components.
Executive Summary

Results of Ineffective IT Governance Can Be Devastating

- Business losses and disruptions, damaged reputations and weakened competitive positions (Nike lost an estimated $200 million while running into difficulties installing a supply chain software system)*

- Schedules not met, higher costs, poorer quality, unsatisfied customers

- Core business processes are negatively impacted (e.g. SAP impacts many critical business processes) by poor quality of IT deliverables (An operational meltdown of the Southern Pacific-Union Pacific merger was traced largely to the inability to co-ordinate their IT systems)*

- Failure of IT to demonstrate its investment benefits or value propositions

Linking the CEO Role in Achieving Business Growth, Improving Profitability and Creating an Effective Governance Environment

Executing enterprise-wide strategic initiatives & effective business operations is a complex undertaking that requires a balance between growth, effectiveness and efficiency.

Critical Success Enablers include: superior leadership skills and motivated change agents, flexible and scalable processes, pragmatic and realistic metrics, a clear governance policy and structure and the use enabling technologies.
How Much Governance is Required? (When is enough, enough?)

Depends on a number of factors:

- **Investment $ (capital and expense) criticality to the organization (mission critical)**
- Degree of business dependency on technology
- **Strategic corporate value proposition and alternatives for focus** (e.g. growth centric, customer centric, process centric, cost centric, etc.)
- Management philosophy and policy (e.g. first mover versus follower)
- Program/Project and/or Operational importance
- **Complexity, scope, size and duration of initiative**
- Number of interfaces and integration requirements with business
- **Degree of risk and potential impact (of doing or not doing)**
- Number of organizations, departments, locations and resources involved
- Customer or sponsor requirements
- **Regulatory, legal, control, audit and documentation compliance required**
- Degree of accountability desired and required
- **Level of security required or desired**

Key IT Governance Strategy & Resource Decisions*

- **IT Principles** – High level statements about how IT is used in the business (e.g. scale, simplify and integrate; reduce TCO and self fund by re-investing savings; invest in customer facing systems; reengineer business and IT processes, strategic plan directions, PMO, etc.).
- **IT Architecture** – Organizing logic for data, applications and infrastructure captured in a set of policies, relationships, processes, standards and technical choices to achieve desired business and technical integration and standardization.
- **IT Infrastructure** – Centrally coordinated, shared IT services that provide the foundation for the enterprise’s IT capability.
- **Business Application Needs** – Specifying the business need for purchased or internally developed IT applications.
- **IT Investment and Prioritization** – Decisions about how much and where to invest in IT (e.g. capital and expense), including development projects, infrastructure, security, people, etc.)
- **People (Human Capital) Development** – Decisions about how to develop and maintain IT leadership, management and technical skills and competencies (e.g. how much and where to spend on training and development, certification, etc.).
- **IT Governance Policies, Processes, Mechanisms and Metrics** – Decisions on composition and roles of Steering Groups, Advisory Councils, Technical and Architecture Committees, Project Teams; Key Performance Indicators (KPIs); Chargeback Alternatives; Performance Reporting, etc.

* Source: Modified from P. Weill & J. Ross, *IT Governance*, HBS Press, 2004
Executive Summary

Integrated IT Governance Framework & Roadmap – Grounded in Industry Best Practice Research and Required to Plan, Develop, Deploy & Sustain a Cost Effective Approach to IT Governance

- The Integrated Governance Framework consists of a composite of five (5) critical IT governance imperatives (which leverage best practice models) and address the following work areas:
  - Business Plan and Objectives (Demand Management)
  - IT Plan and Objectives (Demand Management)
  - IT Plan Execution (Execution Management)
  - Performance Management and Management Controls (Execution Management & Compliance)
  - Vendor Management and Outsourcing Management (Execution Management)
  - People Development and Continuous Process Improvement.

- For each IT governance imperative, a description of the key components are provided which should result in consistent, repeatable, end-to-end and measurable processes.
Identifies the major areas that must be addressed on the journey to a higher level of IT governance maturity and effectiveness

**Executive Summary**

The IT Governance Initiative must be decomposed into manageable and accountable work packages and deliverables and assigned to owners for planning, development, execution and continuous improvement

Establish a comprehensive initiative and annual calendar of key Governance activities

Define key performance indicators (KPIs) for each function, establish targets and monitor performance using balanced scorecards

Ensure development of high quality strategic/operating plans and critical success factors that are comprehensive and mutually consistent

Ensure that program/project budgets are established and quality business cases are developed and tracked for each program/project;

Launch programs/projects as specified in roadmaps, and ensure they are completed on time and on budget by managing demand from business users

Assure that IT Service Management & Delivery is documented and KPIs (e.g. SLAs, other) are monitored to assure appropriate service levels for business

**Manage Governance Initiative**

- Develop Roadmaps
- Develop Strategic & Annual Plan and Budget
- Portfolio Invest. Management

- Develop Programs/ Projects
- Manage Demand (Service Requests, Service Mgmt. & Delivery)

- Develop and Measure Key Performance Indicators (KPI’s)
- Discretionary - Mandatory (Keep Lights on)

- Manage Business Initiatives and Operations

**Manage Planning**

**Manage Execution**

**Manage Performance**

**Manage Value Creation**
Key Roles & Responsibilities – IT Governance

The IT Governance Initiative must have Clearly Defined Roles, Responsibilities and Decision Rights for the Entire Initiative and for Each Major Component of the Integrated IT Governance Framework and Roadmap

Comments / Rationale

- Business Leads sponsor, approve and monitor governance plan, direction, investments, roadmap, deliverables and major changes
- CIO assumes accountability to deliver the IT Governance Roadmap and Related Components – Alignment; Planning; Program/Project Management; IT Service Management & Delivery and Performance Management
- Business Managers assume responsibility for their roles in IT Governance (e.g. Define Requirements, Approve Projects, Process/application ownership, Review progress, Approve Deliverables and Implementation)
- IT Managers assume responsibility to develop, deploy and sustain their part of the IT Governance roadmap (e.g. Alignment, Portfolio Investments, Programs, Projects and Service Management & Delivery)
- Professionals informed of governance initiative and what is expected of them

A Decisions Rights Matrix identifying Decision Influencers and Decision Makers is Necessary to Clarify Decision Roles and Authority Levels for the major IT Governance Components

<table>
<thead>
<tr>
<th>IT Governance Component</th>
<th>Input to Decision</th>
<th>Decision Authority</th>
<th>Comments/Examples (Varies by Organization)</th>
</tr>
</thead>
</table>
| IT Principles (High value statements about how IT will be used to create business value) | Business Units     | IT Senior Leadership Group & CIO; Executive Officer Group | • Scale, simplify, integrate  
• Reduce cost of IT & self fund  
• Re-engineer/consistent processes  
• Invest in customer facing systems  
• Investment $ Threshold Approvals  
• Key Performance Indicators/CSFs |
| IT Investment, Plan, Prioritization, Critical Success Factors and Key Performance Indicators (KPIs) | Business Units     | IT Steering Committee (ITSC) (Business & IT Executives); Projects over $500K: | • ITSC recommends priority to CEO for any projects requiring over $500K  
• Identify, track and measure critical success factors and associated KPIs |
| Business Applications                                        | Business Units and Corporate Functional Unit Heads | IT Steering Committee                      | Significant business application spend must be approved during the annual budget process, and if over $500K, approved by ITSC |
| IT Infrastructure and Architecture                           | IT Steering Committee | IT Architecture/Technology Review Board (and Business Units for related applications) | Significant infrastructure spend must be approved during the annual budget process, and if over $500K, approved by ITSC |
| Outsourcing & Vendor Management                              | IT Steering Committee + Business Units | Senior leadership (Depends on scope) | Significant outsourcing initiative should be recommended by ITSC & approved by Executive officer Group |
| +++ Others                                                    |                   |                                        |                                          |
IT/Business Steering and Governance Boards and Roles

• Business/IT Plans - Alignment
• IT Plan Review & Approval
• Investment Portfolio Management Selection, Prioritization, Funding and Authorization
• Formal Periodic Progress & Performance Reviews
• Final escalation point for issues resolution

Why?
• Helps to ensure alignment across all of X’s businesses. It is recognized that the demand for IT resources will exceed available resources/budget and establishing X’s wide priorities is essential.
• Provides forum for investment decision making which is synchronized with the business.
• Builds an enterprise view and helps to eliminate stovepipe systems, processes, and duplication of efforts across X.

What (Charter)?
• To review and approve plans, strategies and major programs/projects and establish priorities among competing requests for resources to ensure that everyone is aligned on those initiatives with highest “value add” to X as a whole.
• To establish and support processes where needed to effectively fulfill the charge outlined in (1) above.
• To conduct formal periodic reviews of major initiatives
Illustrative Business/IT Executive (Operating) Steering Committee Charter
– Why and What? (Cont’d)

Roles and Responsibilities
• Review & approve overall IT plans
• Review, prioritize, approve major ATMI IT Investments
• Conduct Formal Periodic Project Progress & Performance Reviews
• Final Escalation Point for Major IT/Business Issues Resolution
• Support and sponsor IT Governance policy and process improvement programs impacting the Executive Steering Board membership organizations and help deploy them in their organizations

Frequency of Meetings
• Monthly initially, unless it is determined that more frequent or less frequent meetings are needed

Other Steering & Working Committees
• Since successful IT Governance requires multi-level participation, we plan on establishing additional Business/IT Steering and Working Committees at the Business Unit Level (e.g. Packaging & Materials), as well as major functional areas such as Supply Chain Management, Global Financials, Marketing and Sales, R & D and others as necessary

IT Demand Management – Classifications (Illustrative Example) Exhibit 6

<table>
<thead>
<tr>
<th>Classification</th>
<th>Type of Request or Demand Mgt.</th>
<th>Comments/Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mandatory (Business Enablement)</td>
<td>Service Interruption (Break &amp; Fix)</td>
<td>A problem caused the disruption of IT service and must be fixed and restored as soon as possible</td>
</tr>
<tr>
<td></td>
<td>Maintenance</td>
<td>Scheduled maintenance must be performed to keep applications and infrastructure operating efficiently</td>
</tr>
<tr>
<td></td>
<td>Keep the Lights On and Legal/Regulatory</td>
<td>The costs and resources required to support the basic steady state operations of the business, including some components of infrastructure</td>
</tr>
<tr>
<td>Discretionary* (Require ROI)</td>
<td>Major New/Change (Complex) Initiatives (Full Risk Mitigation)</td>
<td>Complex new initiatives or major changes (major enhancements or modifications) to systems, processes or infrastructure and provide new or additional functionality or capacity</td>
</tr>
<tr>
<td></td>
<td>Fast Track (New/Change) (Simple or Limited Scope)</td>
<td>Simple new initiatives and minor changes that do not required the rigor and discipline of a complex initiative and be fast tracked.</td>
</tr>
<tr>
<td></td>
<td>Standard (Repetitive) Request</td>
<td>Describe product/service (functions, features and price and place in a product/service catalogue)</td>
</tr>
<tr>
<td>Strategic</td>
<td>Major initiative – Realistic ROI may not be doable – too early; however, TCO &amp; TBR may apply</td>
<td>A strategic initiative may fall into several categories – first market mover (new product or service); R &amp; D; competitive advantage, etc.</td>
</tr>
</tbody>
</table>

*Note: Criteria for differentiating between complex or fast track initiatives or service catalogue listings will vary for each organization.
Strategic Questions* - Are we doing the right thing? Is the Investment:
- In line with our business vision?
- Consistent with our business principles, plan and direction?
- Contributing to our strategic objectives and sustainable competitive differentiation?
- Providing optimum value at an acceptable level of risk?

Value Questions – Are we getting the benefits?
- A clear and shared understanding and commitment to achieve the expected benefits.
- Clear accountability for achieving the benefits which should be linked to MBOs and incentive compensation schemes.
- Relevant and meaningful metrics.
- An effective benefits realization process and sign-off.

Delivery and Execution Questions – Are we deploying well and effectively?
- Scalable, disciplined and consistent management, governance & delivery processes
- Appropriate and sufficient resources available with the right competencies, capabilities and attitudes

IT and Non-IT Spend as a % of Sales*

Non-IT Spend on Business Process Transformation Represents a Much Greater Opportunity for IT to Deliver Real Value for an Organization

* Brian Truskowski, VP and CIO, IBM, Presentation on “Changing Role of CIO at IBM,” at SIM Westchester-Fairfield County Chapter, 5/18/06
IT Investment Management Portfolio Alternatives Consist of Discretionary (Optional), Strategic and Mandatory (Keep the Lights ON) Requirements and the Amount of Investment % in Each Portfolio Should be Driven by Business Needs and Will Change from Year to Year

Portfolio Investment % in specific portfolios will vary by organization

Select Balanced Score Card Metrics for Business and IT Governance

Should link Critical Success Factors (CSFs) to Key Performance Indicators (KPI’s) for business and IT (Illustrative Example)

Balanced Score Card – Key Performance Measures - Business*

- Financial (including compliance) – revenue & profit growth, budgets/expenses, ROA, ROI, NPV, cost reduction, laws and regulations, etc.
- Strategic/Customer – new product/service development, intellectual property, asset management, portfolio valuation, customer satisfaction, improvement in employee and organizational skills and maturity, etc.
- Internal/External Processes – process and/or technology innovation and transformation in sales and marketing, productivity, regulatory compliance, human resources, operations, engineering, manufacturing, customer service, IT, purchasing, vendor management, etc.
- Learning and Growth – people development, education, training, certification, job rotation, mentoring, etc.

Balanced Score Card – Key Performance Indicators - Information Technology*

- Financials – revenue and profit growth, cost reduction & self funding, budgets/actuals/variances, ROI, payback, NPV, cost per IT customer, % of IT budget to revenue
- Strategic – competitive positioning, business value, alignment, differentiation through technology, growth, etc.
- Customer (User) Satisfaction – ownership, commitment, involvement, part of team, level of service
- Employee Satisfaction/People Development – training, certification, productivity, turnover
- Program/Project Management Process* – time/schedule, budget/cost, deliverables, scope, quality, resources, number of risks, number of changes, key issues, earned value, % of rework, etc.
- Service (Operations) Process* – service levels, uptime, service delivery, reliability, redundancy, availability, problem reporting and control, scalability, backup & disaster recovery plans, mean time to repair, response times, amount of errors and rework, etc.

* (Note: For each category, more granular metrics are available, depending what needs to be measured))
* Modified from Kaplan and Norten, 2001

Executive Summary

Link Business to IT Metrics
Key Objectives of the Sarbanes-Oxley Act

The massive investor losses at Enron, Tyco and Worldcom were attributed to the most senior executives – the CEO and CFO
- Consequently, CEOs & CFOs are now legally responsible for their actions and violations are criminal acts

• Broaden sanctions/penalties
  – Criminal penalties strengthened when management issues false financial reports

• Improve reporting/disclosures
  – New requirement to report on internal control – Section 404

• Heighten auditor independence
  – Certain services can no longer be performed by auditors

• Strengthen corporate governance
  – New standards for audit committee practices

• Expand insider accountability
  – New requirements for code of ethics and protection for whistleblowers

• Increase oversight
  – Creation of PCAOB
  – Increased SEC review of company filings on 10-K/10-Q
Sarbanes-Oxley Act of 2002

Key Section's of the Sarbanes-Oxley Act

Section 302: Corporate Responsibility for Financial Reports
The first phase of Sarbanes-Oxley took effect in the fall of 2003. Section 302, requires CFOs and CEOs to personally certify and attest to the accuracy of their companies' financial results.

Section 404: Management Assessment of Internal Controls, the most urgent IT challenge for SOX compliance is found within Section 404, which requires auditors to certify the underlying IT controls and processes companies need to ensure accurate financial reporting at three levels*:

- General Computer Controls – addresses the overall IT control environment in which financially significant systems operate
- Application Controls – address specific controls within a financially significant application.
- End User Controls – (also known as spreadsheets) – involves any tools such as Access, Excel, etc., where users manipulate or process financially significant information.

Section 409: Real-Time Issuer Disclosures - The most difficult aspect of Sarbanes-Oxley compliance, is still planned for the future. It calls for real-time reporting of material events that could affect a company's financial performance. The time-sensitive aspect of this regulation will likely put significant pressure on existing IT infrastructures and data management activities.

*SAS 70 Reports – Type I versus Type II

Independent auditor reviews a description of internal controls and assesses whether those controls, as described, would be effective and may be relied upon

The auditor must provide the same opinion as a Type I and then test the internal controls and assess whether the controls in use were, in fact, effective and may be relied upon
Select Implications of the Sarbanes-Oxley Act on IT

Executive Summary

• Improve financial reporting/disclosures
  – New requirement to report on internal controls for financial statements – Section 404

• Expand insider accountability
  – New requirements for code of ethics and protection for whistleblowers

• The external auditors can insist that any gaps in IT controls be addressed before an overall opinion is reached on the effectiveness of the internal company controls.

• Requires a backup for all “financially significant files, storage of those files and periodic restoration of backup files.”

• Requires IT change management tracking and documentation for financial systems.

• Requires the maintenance of logs for user access to financial data bases, security logs, administrative logs, problem and incident logs as well as an independent review of the logs to detect any activities that could adversely impact the financials.

• Requires systems documentation and verification that data is properly handed off from one system to another.

Select Technology & Process Solution Enablers to Improve IT Governance (Illustrative Example)

Both Process and Technology Solutions are Necessary To Manage and Sustain Cost Effective IT Governance Decision Support and To Achieve Higher Levels of IT Maturity

Implement ITIL

Optimize Performance; Minimize Change & Risk

Optimize Asset Portfolio & Utilization

Track and optimize investments & resources

Service Level Management
Service Catalogue & Support
Change & Risk Management

Configuration Management
Asset Inventory & Utilization
Vendor & Contract Management
Time, Cost and Benefits
Program/Project Management
Investment & Resource Management

IT Service Management & Delivery

Asset Management

Program/Project Portfolio Investment & Execution Management

IT Governance
Avoiding IT Governance Implementation Pitfalls

- Treat the implementation initiative as program or project with a series of phases with timetables and deliverables
- Remember that implementation requires cultural change and transformation, which requires:
  - Marketing of the value proposition
  - Manage culture change and transformation
  - Obtain executive management buy-in and ownership
- Manage expectations of all constituents – IT Governance takes time and represents a series of continuous improvement processes
- Demonstrate measurable and incremental improvements in the IT Governance environment and communicate them

The Success of IT Governance is more often determined by Leadership, People Skills and Managing Cultural Transformation well than by Policies, Procedures, Processes and Technologies

**IT Governance Policy, Processes Technologies (40%)**

**Leadership/People/Soft Skills (60%)**

- Marketing, Cultural Transformation, Effective Communications, Trust, Integrity, Honesty, Leadership, Values, Team Building, Flexibility, Decision making, Perspective, Sound Business Judgment, Negotiations, Customer Relations, Motivation, Incentives, Managing Change, Managing Expectations, Common Sense, etc.
Key Leadership Principles for Creating and Sustaining a Successful IT Governance Culture and Environment

• **Proactively Design and Manage the IT Governance Program** — requires executive management sponsorship, an executive champion and creating a shared vision that is pragmatic, achievable, marketable, beneficial and measurable. Link goals, objectives and strategies to the vision and performance evaluations.

• **Mobilizing Commitment & Provide the Right Incentives** — There is a strong commitment to the change from key senior managers, professionals and other relevant constituents. They are committed to make it happen, make it work and invest their attention and energy for the benefit of the enterprise as a whole. Create a multi-disciplinary empowered Tiger Team representing all key constituents to collaborate, develop, market and coordinate execution in their respective areas of influence and responsibility.

• **Make Tradeoffs & Choices & Clarify Escalation and Exception Decisions** — IT Governance is complex, and requires tradeoffs and choices, which impact resources, costs, priorities, level of detail required, who approves choices, to whom are issues escalated etc. At the end of the day, a key question that must be answered is, “When is enough, enough?”

• **Making Change Last, Assign Ownership & Accountability** — Change is reinforced, supported, rewarded, communicated (the results are through the Web and Intranet) and recognized and championed by owners who are accountable to facilitate the change so that it endures and flourishes throughout the organization.

• **Monitoring Progress, Common Processes, Technology and Learning** — Develop/ adapt common policies, practices, processes and technologies which are consistent across the IT Governance landscape and enable (not hinder) progress, learning and best practice benchmarking. Make IT governance an objective in the periodic performance evaluation system of key employees & reward significant progress.

---

**Steps in Making the IT Governance Real and Sustainable**

• Must have a corporate mandate from the top - the Board and the Executive Leadership Team are committed to implementing and sustaining a robust Governance environment

• Must have dedicated and available resources - identify **Executive Champion** and **Multi-Disciplinary Team** (to focus on each IT Governance component)

• **Do Homework** — Educate yourself on past, current and emerging best practices

• **Market the benefits and communicate** the IT governance value proposition to the organization

• Develop a tailored IT governance framework and roadmap for your organization based on current and emerging industry best practices

• Assess the “current state” of the **level IT governance maturity** (decompose into its major components), using a leading industry best practice framework such as CMMI
Executive Summary

Steps in Making the IT Governance Real and Sustainable (Cont’d)

• Develop a “future state” IT governance blueprint (where you want to be) & keep it in focus

• Decompose the IT Governance components into well defined work packages & an assign

• Develop an IT Governance action plan, identify deliverables, establish priorities, milestones & allocate resources

• Sponsor organizational and individual certifications in the IT Governance component areas, where they are available (e.g. PMP, ITIL, IT Security, IT Audit, BCP, Outsourcing, etc.)

• Identify enabling technologies to support the IT Governance initiatives

• Establish a “Web Portal” to access IT Governance policies, processes, information and communication wins

• Plan for and sustain IT governance process improvements and link to a reward structure. Create a “Continuous IT Governance Improvement group to sustain the framework

A First Step - Assess Current Maturity of IT Governance

Use an industry best practice – CMMI - framework to analyze current and target state maturity levels for each IT governance component:

1. **Initial Level**: The IT governance process is characterized as ad hoc and occasionally even chaotic. Few processes are defined and success depends on individual efforts.

2. **Repeatable Level**: Basic IT governance processes are established. The necessary discipline are in place to repeat earlier successes.

3. **Defined Level**: The IT governance processes are documented, standardized, and integrated into the management policies and procedures. All governance processes are implemented using approved, tailored versions of the IT governance policy.

4. **Managed Level**: Define, collect and make decisions based on each IT governance component’s measurements. IT governance processes and metrics are quantitatively understood, reported and controlled.

5. **Optimizing Level**: Continuous process improvement is enabled by quantitative feedback from the process, from piloting innovative ideas and from adopting external industry best practices and standards.
High Level Assessment of Current Level of IT Governance Maturity and Future Target State

Illustrates an Organization’s Current and Future Targeted State of IT Governance Maturity. All Organizations Require a Roadmap and Plan to Move Up to Higher Levels of Maturity and Effectiveness

CMMI Model or Equivalent
Can Be Used to Assess Stage or Level of IT Governance Maturity (By Major Component – Alignment & Planning; Program/Project Management; IT Service Management; Strategic Sourcing, Performance Management, etc.)

59

**IT/Business Alignment Maturity Assessment Model**

* - Relates IT/Business alignment criteria to assist enterprises to evaluate their level of maturity and set a direction to improve, in six areas.

*Source: Luftman*
The template can be used to assess the level of IT Governance and its major component, process, maturity and effectiveness (1=low; 5=high).

Additional IT Governance components from COBIT, ISO 17799 or others may be added across the horizontal axis as required.

**IT Governance – Current & Future State Transformation Flow**

IT Governance Process Improvement Flow - In order to develop and/or improve a governance process (business or IT), an organization must assess its current & future IT governance state and develop a plan to transform IT.

1. **Where do we want to be?**
   - Vision and business objectives
   - Imperatives (must do & should do)
   - Strategic & Actions

2. **Where are we now?**
   - Assessments
   - SWOT Analysis
   - Strengths, Weaknesses, Opportunities & Threats
   - Core Competencies

3. **How do we get where we want to be?**
   - Process Change
   - Adopt best practices & industry models
   - Executive Champion
   - Strategic Plans
   - Project Management
   - Deliverables
   - Technology enablement

4. **Where do we know we have arrived?**
   - Metrics
   - Balanced Scorecard

(Defining Future State of IT Governance and Components including Assumptions—This is an iterative process)

(Assess Current State of IT Governance Using a leading practice framework like CMMI or equivalent)

(Develop & Implement Strategies and Actions For Transformation from Current to Future State)

(Performance Management—Monitor, measure all progress & take action)
## Future State IT Governance - A Blueprint Concept

**Executive Summary**

- **SBU Requirements**
- **Functional/Corporate Needs**
- **Business Intelligence**
- **Business/IT Exec. Steering Council**

### Strategic Planning (Business/IT Alignment Driven)

- Each core business process area submits its strategic roadmap together with business justification for review and approval, and finalizes them based on decisions made by the Business/IT Exec. Steering Council.

### Application Development (Metric Driven) / Programs / Projects

- IT establishes a Program Manager and budget for each key program approved by the Exec. Steering Council.
- Each Program Manager initiates projects as specified on the approved roadmap by forming cross-functional Project Teams.
- Project Teams receive formal authorization from PMO before initiating and closing projects, and releasing to production.

### Service Support (Metric Driven)

- Internal or outsourced

### Service Delivery (Metric Driven)

- Internal or outsourced resources manage each technology

### Compliance

- All processes are documented and monitored for compliance

## Mission: Run IT Like a Business

**Sprint-Nextel Strategy**

- **People**
- **Process**
- **Technology**

**Business Organization**

**Business Process**

**IT Systems**

---

**IT Governance-10-31-07 ©Copyright, GPS Group, Inc., 2006-2008. All Rights Reserved.**
The IT Balance Scorecard

- Supports the Enterprise Balanced Scorecard
- Aligns with IT customers’ Balanced Scorecards
- Cascades down to IT VP level Scorecards
- Is directly tied to individual performance objectives
Global Consumer Goods Organization

**Environment**
- Annual Revenue range - $6 - 10 Billion
- Number of Employees – 40,000 - 50,000
- Number of IT Employees – 1,200 - 2,000
- IT spend as a % of revenues – 2 – 3%
- Very competitive industry with operations in 50 - 70 countries
- Brand management driven with strong focus on marketing and sales
- CIO reports to CEO and is a member of the Executive Management Team
- Company is transitioning from a decentralized environment to a more coordinated regional & global management environment to take advantage of operating synergies

**Issues and Challenges**
- IT strategic plan process is new & not yet linked to annual operating plan & budget
- IT has many disparate applications, operating systems and hardware inherited from a historical decentralized environment that is slow and difficult to change. Global IT consistency is a challenge
- Tensions of a matrix organization – Regional IT Managers report into regional business heads with a dotted line to CIO

**Case Studies – IT Governance**

**Approach**
- Company has been moving towards a more coordinated global and regional operating environment by establishing various steering committees that focus on the specific functional/process areas such as Supply Chain, Marketing and IT to assist in working and creating synergies across global regions
- Senior IT management representatives are members of each of the key business councils
- Recently, IT is establishing a strategic planning process, which will link to the portfolio investment process, capital and expense budget process and program/project execution process
- IT established a global architecture group to coordinate consistent hardware and software (e.g. Operating Systems, Major Application Packages, etc.)

**Objective**
- Owner
- Metrics
- Targets
- Status
- Actions required
<table>
<thead>
<tr>
<th>Case Studies – IT Governance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Global Consumer Goods Organization</strong></td>
</tr>
</tbody>
</table>

### Results - Alignment
- CIO sits on the Executive Management Operating Council and is an equal peer/partner with business & assures a closer alignment of IT support for business
- A 3 year financial plan is developed for IT, about 50% is dedicated to supporting the business unit applications (charged back) and 50% to infrastructure and keeping the lights on
- IT portfolio investment management is a rolling process & identifies IT capital spend by geography and functions. It is prioritized based on discretionary and mandatory criteria with top down and bottom up input
- Balanced scorecard and report card metrics are linked to critical success factors of business and IT( financials, cost, performance, quality, etc. )
- Established an customer/IT engagement (single point of contact) model to improve relationships, build trust and focus on priorities of major business functions

### Results - IT Service Management & Delivery
- A variety of metrics and tools are used to measure the efficiency, capacity and availability, utilization and service-ability of the operations and infrastructure assets and group
- Elements of ITIL processes have been and are being implemented in the IT operations and infrastructure area
- The IT infrastructure (Operations and Telecommunications) are centralized through the CIO organizations with strong dotted line coordination throughout the globe

### Results - Program/Project Management
- Established a PMO center of excellence
- Developing a flexible and scalable PM process to handle fast track and complex projects
- Implementing a global Portfolio/Project Management tool (Nikku)

### Results - Performance Management & Management Controls
- Select IT metrics are included in the IT monthly status report (e.g. key line items designated as green, yellow and red)
- An annual user satisfaction survey is conducted by IT measuring 8 areas of IT delivery: communications, responsiveness, up-time, alignment, business process transformation, IT process transformation (streamline IT process), project, relationship mgmt. and application support
- A monthly Sarbanes Oxley report is issued & tracks a number of required categories
- A narrative IT annual report is issued reporting news, strategies ,etc.

### Lessons Learned
- IT governance is a journey towards continuous improvement
- Cultural and organizational transformation is difficult, but necessary to survive
- Involve local, regional and corporate management employees in direction setting and execution initiatives in a spirit of cooperation, communications, trust and partnership
- Establish global centers of excellence (located in multiple regions) for IT and let them lead by example: Web/e-business, Core center applications, Infrastructure, PMO/SDLC, Enterprise Data Architecture, Advanced Technology, Etc.
**Summary**

- IT governance is a broad and complex topic with many parts
- IT governance represents a journey - It is not a one time event and to achieve higher levels of IT maturity, IT governance should be persistently and relentlessly pursued both from a top down and a bottom up perspective
- Creating and sustaining a more effective IT governance environment will take time and money and should be focused on achieving incremental IT governance deliverables
- Clearly defined roles, ownership and accountability is essential for success
- IT governance requires three pillars to succeed:
  - Leadership, organization and people
  - Consistent, but scalable and flexible policies and processes
  - Enabling technologies
2.0 Integrated IT Governance Framework and Roadmap

• There are a growing number of models and frameworks that address one or more aspects of either business and/or IT Governance. There are few that integrate the components necessary to plan, develop and deploy a comprehensive IT Governance Framework and Roadmap to help guide an organization process improvement initiatives in this area.

• Some organizations use the COBIT (Control Objectives for Information and Related Technologies), but it does not focus on IT/Business Alignment or performance or outsourcing and is very control oriented. Others approach the problem from a security perspective and use ISO 17799 and ISO 27001 as a framework. Efforts are being made to correlate COBIT with ITIL, ISO 17799/ISO27001, CMMI, Prince2, PMBOK and other frameworks. Still others focus on strategic sourcing and are using ITsqc and the IAOP frameworks.

• The integrated IT Governance Framework and Roadmap proposed in this section includes the above frameworks plus additional ones that are very relevant to improving IT governance maturity and effectiveness.

Objectives

• Introduce an Integrated IT Governance Framework and Roadmap
• Provide an overview of select examples of current and emerging industry (vendor independent) best practice frameworks, maturity models and standards
• Identify the prerequisites for successful IT governance
• Identify the parameters that should determine how much IT governance is required
Benefits of Using an Integrated IT Governance Framework Leveraging Current and Emerging Best Practices Models, Frameworks and Standards

- Grounded in industry best practice research and experience
- Improve trust, credibility and confidence
- Overcome vertical silos and avoid re-inventing wheels
- Faster Acceptance
- Better Resource Utilization (Reduce, contain and/or avoid costs) based on standards
- Improve Customer Satisfaction and Responsiveness
- Common Terminology
- Clear Accountability
- Consistent, Repeatable, End-to-End, Measurable Processes
- Accelerated deployment (do not have to re-invent the wheel)

Integrated IT Governance Framework & Roadmap - Required to Plan, Develop, Deploy & Sustain an Effective Governance Policy and Process

- The **Integrated Governance Framework** consists of a composite of five (5) critical IT governance imperatives (which leverage best practice models) and address the following work areas:
  - Business Plan and Objectives (Demand Management)
  - IT Plan and Objectives (Demand Management)
  - IT Plan Execution (Execution and Resource Management –includes PM/PMO, ITSMD/ITIL, etc.)
  - Performance Management and Monitoring and Management Controls
  - Strategic Sourcing, Outsourcing and Vendor Management
  - People Development, Learning and Continuous Process Improvement

- For each IT governance imperative, a description of the components are provided as well as the deliverables and appropriate best practice model, frameworks and standard references

- An overview of select best practice models critical to IT Governance is provided
### Integrated IT Governance Framework & Roadmap

Identifies the major areas that must be addressed on the journey to a higher level of IT governance maturity and effectiveness.

#### Lessons from a Business Strategist

**Strategic Corporate Value Propositions - Alternatives For Focus**

(Effective Use of IT Can Enable – Innovation, Growth, Profitability, Asset Management, Cost Control and Customer Satisfaction)

- **CUSTOMER INTIMACY**
  - (e.g. 80/20 rule; % of repeat customers; % of customer dollar spent; exceptional customer service, etc.)
  - *A COMPANY CANNOT BE ALL THINGS TO ALL PEOPLE - PICK ONE & EXCELL. COMPETE IN THE OTHER TWO.*

- **OPERATIONAL EXCELLENCE (LOW COST)**
  - (e.g. 6 Sigma, CMMI, PMMM, ISO 9000, Outsourcing; ROL, ROA)

- **PRODUCT LEADERSHIP**
  - (e.g. Innovation, Speed to Market; Growth %- Change in Revenue, ROI)

### IT Governance Framework

**PMI’s Organizational Project Management Maturity Model (OPM3)**

**Overview:** PMI’s OPM3 is a guideline comprised of three key elements that are intended to help organizations self-assess their PM organizational capabilities and improve their level of PM maturity.

**Knowledge Element** – Describes organization project management maturity, explains why it is important and how maturity can be recognized.

**Assessment Element** - Identifies methods, processes and procedures that an organization can use to self-assess its PM maturity.

**Improvement Element** – Provides a process for moving an organization from its current level of maturity to higher levels of maturity. OPM3 is not an organization certification framework, but represents a continuous improvement process.

*Source: Project Management Institute*
PMM (Project Management Maturity Model) – Blends PMI’s PMBOK 9 knowledge areas with SEI’s CMMI’S 5 (Software Engineering Institute’s Capabilities Maturity Model Integrated) levels of maturity and enables organizations to self-assess their project management capabilities in the PMBOK areas at any given level and focus on identified activities that would help to achieve continuous improvements up the PM maturity ladder.

- PMM represents a 5-level project management maturity model developed by PM Solutions, Inc. which integrates:
  - PMI’s PMBOK 9 Knowledge Areas with SEI’s 5 Levels of Maturity
    - Level 1 – Initial Process
    - Level 2 – Structured Process and Standards
    - Level 3 – Organizational Standards and Institutionalized process
    - Level 4 – Managed Process
    - Level 5 – Optimized Process
- PMM identifies a well defined and easy to use road map to improve organizational PM maturity
- PMM enables an organization to assess its project management capabilities in the PMBOK knowledge areas at any given level.
IT Governance Framework

Capability Maturity Model Integrated (CMMI)

- CMM was developed by the Software Engineering Institute (at Carnegie Mellon University) and is a process improvement model, originally developed, and still largely used as a framework to guide system and software development efforts and provide a method for assessing the capability of contractors (originally for the U.S. Government).

- CMMI, the successor to CMM, is a software and systems engineering process improvement model that provides a set of practices that address productivity, performance, costs, and overall customer satisfaction.

- The CMMI roadmap consists of three cycles:
  - **Entry/Reentry Cycle** – Specifies the actions required to evaluate, adopt and adapt processes for continuous improvement and reduction of defects.
  - **Implementation Cycle** – Specifies the actions required to create an environment and the infrastructure needed for improvement.
  - **Process Cycle** – Specifies the actions required to execute and monitor the processes.

- CMMI process areas consist of 5 maturity levels (See Diagram).

- CMMI Certification is performed by licensed third party organizations.

- CMMI is generally pursued by large software development shops or vendors supplying software or systems engineering services to public and private organizations on-shore or off-shore.

---

CMM/CMMI Process Areas by Maturity Level (Version 1.1)

PRINCE2 (Projects in Controlled Environments)

• PRINCE2, an enhancement to PRINCE, was established by CCTA (Central Computer Telecommunications Agency). It has become a de facto standard used extensively by the UK Government and its vendors to manage IT projects and is widely utilized in the private sector, both in the UK and internationally.

• Key features of PRINCE2:
  – Focuses on business justification
  – Identifies a defined organization structure and processes for the project management team
  – Product (deliverable) based planning approach
  – Emphasis on dividing (Work breakdown) the project into manageable and controllable stages or packages
  – Flexibility to be applied at a level appropriate to the project
  – Used as a standard for UK government systems projects

PRINCE2 Process Model*

*Source: CCTA
ISO 9001 (or ISO 9001) and ISO 14000 Overview

- ISO 9001 focuses on quality improvements and reduction of defects in and applies to an organization’s overall operations. ISO 9001: 2000 strives to satisfy customers by continuing to improve the quality of an organization’s processes and operations.
- ISO certification is performed by licensed independent third parties and is recognized globally.
- The ISO 9001 family is primarily concerned with “quality management”. This means what an organization does to fulfill:
  - The customer’s quality requirements
  - Applicable regulatory requirements
  - Achieve continual improvement of its performance in pursuing these objectives
- The ISO 14000 family is primarily concerned with “environmental management”. This means what an organization does to:
  - Minimize harmful effects on the environment caused by its activities
  - Achieve continual improvement of its environmental performance

Six Sigma Overview

**Six Sigma** – represents a methodology (it is an attitude, not just a method) of continual process and product improvement identified and measured through the use of process variance statistics. While it represents an organizational (top down sponsorship is crucial) mind set to be successful, “individuals” are certified by ASQ (American Society for Quality) and other organizations.

- Six Sigma has evolved from quality improvement practices (developed in Japan and the U.S.) and was popularized first by Motorola and then by GE in the USA.
- Technically, Six Sigma is a statistical representation of 3.4 defects per million opportunities.
- Organizationally, Six Sigma represents a managerial methodology for continuous process and product improvement throughout an organization identified by process improvement techniques and measured quantitatively through process variance statistics.
- **Individuals are certified as Six Sigma Black Belts** (and other belts) in the public domain by the Association of Systems Quality (ASQ); GE for their employees and others.
- Six Sigma is an attitude and a frame of mind, not just a methodology.
- **Six Sigma** is an organizational initiative or discipline that measures statistical variances and determines what pieces of a process must be improved by:
  - Measuring the inputs, efficiency and outputs
  - Mapping them against customer requirements
  - Identifying improvements areas
  - Resetting benchmarks (at higher levels)
Six Sigma – is about creating accurately predictable output processes that are fully aligned with customer demands

- It is an organizational initiative or discipline that measures statistical variances and determines what pieces of a process must be improved by:
  - Measuring the inputs, efficiency and output
  - Mapping it against customer demands
  - Identifying improvement areas
  - Resetting benchmarks (higher)

- Six Sigma has evolved from quality improvement practices (developed in Japan and the U.S.) and was popularized first by Motorola and then by GE in the USA.
- Technically, Six Sigma is a statistical representation of 3.4 defects per million opportunities.
- Organizationally, Six Sigma represents a managerial methodology for continuous process and product improvement throughout an organization identified by process improvement techniques and measured quantitatively through process variance statistics.
- Individuals are certified as Six Sigma Black Belts (and other belts) in the public domain by the Association of Systems Quality (ASQ), GE for their employees and others.
- Six Sigma is an attitude and a frame of mind, not just a methodology.
- To be successful, Six Sigma requires a radical change in the way an organization works
- According to GE, customers and shareholders love it:
  - It drives customer centricity
  - Reduces costs
  - Improves product/service/systems capability and performance

Eight Steps to Six Sigma
1. Identify strategic business objectives
2. Identify core, key sub and enabling processes
3. Identify process owners
4. Identify key metrics and dashboards (KPIs- Key Performance Indicators)
5. Collect data from KPIs and analyze
6. Select process improvement criteria
7. Prioritize process improvement projects
8. Continual Management of Processes

GE 6 Sigma Process Improvement Methods:
1. Improved Control – DMAIC – Define, Measure, Analyze, Improve, Control (On average, the process is great – the issues lie with the variation)
2. Process Redesign – DMADV – Define, Measure, Analyze, Re-Design, Verify (Structural problem with the process)
### Comparing Lean and Six Sigma Methodologies

<table>

### Quality Function Deployment (QFD) Overview

**QFD** – structured approach to defining customer needs or requirements and translating them into specific plans to produce products to meet those needs

**Summary of Customer Needs** – summarize the needs in a product Planning (requirements) Matrix. These matrices are used to translate higher level “What’s or needs into lower level How’s,” product requirements or technical attributes to satisfy those needs

**QDF Matrices** – QDF matrices are the means and not the end. The real value in the process of:
- Communicating with the customer
- Decision making
- Multi-functional team participation

**QFD Four Phases** -
- **Product Planning** – define customer needs and prioritize strong, moderate and weak, etc.
- **Assembly/Part Deployment (BOMP)** - identify parts and assemblies & translate into characteristics and target values
- **Process Planning** – Determine critical processes, process flows, parameters
- **Process & Quality Control** – Establish process quality, inspection and test methods

Kano Model & Framework Overview

**Kano Model** – a technique for assessing customer satisfaction by classifying product attributes into three classifications: threshold (basic/musts), one dimensional (performance/linear) and attractive (Exciters/Delighters); determining how they are perceived by the customer and their impact on customer satisfaction. These classification are useful for guiding design decisions in that they indicate when good is good enough and when more is better.

**Product Characteristics are classified as**:  

- **Threshold/Basic Attributes** – Attributes which **must** be present in order for the product to be successful. This can be viewed as the “price of entry.”
- **One Dimensional Attributes (Performance/Linear)** – These attributes are **directly correlated to customer satisfaction** (e.g. increased functionality will result in increased customer satisfaction).
- **Attractive Attributes (Exciters/Delighters)** – Customers can get great satisfaction from a feature and may be willing to pay a premium price. These are often difficult to identify up front and therefore are called latent or unknown needs

**Product Differentiation** – can either be gained by a high level of execution of the Linear attributes or the inclusion of one or more “delighter” features

*Source: Kano Model, http://www.betterproductdesign.net/tools/definition/kano.htm

---

**The Kano Framework**

Represents a technique for assessing customer satisfaction by classifying products or systems into three classifications: threshold (basic or musts), one dimensional (linear) and attractive (exciters and delighters) or unattractive elements.

![Kano Framework Diagram](http://www.betterproductdesign.net/tools/definition/kano.htm)

- **Customer Satisfaction**: Excitement (Differentiation)
- **Linear (Competitive)**
- **Basic (Cost of Entry)**

- Field research
- Marketing/branding vision
- Industrial design, packaging
- Call center data
- Site logs

- Competitive analysis
- Interviews
- Surveys
- Search logs
- Usability testing
- Customer forums

- Focus groups
- Lawsuits & regulations
- Buzz on Internet

*Source: Kano Model – http://www.betterproductdesign.net/tools/definition/kano.htm*
Kano Model & Framework Overview

- **Noriaki Kan, Professor, Tokyo Rika University**
  - Research areas: quality and customer satisfaction
  - “Voice of the customer” – Better client communications and customer experience is fundamental to design (interactive product design)

- **Kano Structured User Survey Methodology**
  - Determine main customer product functions
  - Devise questionnaire into two groups for each feature - functional questions (the feature is present) and dysfunctional questions (the feature is not present)

- **Summarize Kano Questionnaire Answers** – I like it: I expect it: I’m neutral; I can tolerate it: I dislike it.

- **Identify Classification of Responses** - Plot Features on Kano Graph of Functional and Dysfunctional question responses (like, expect, etc.) based on classifications (excitement, linear, basic, etc.)

- **Kano Model Uses** –
  - Especially for widely divergent user populations
  - Adds market analysis dimension
  - Leverage data for targeting marketing and promotional messages

ITIL (Information Technology Infrastructure Library)

- Owned and maintained by OGC (Office of Government Commerce – UK)
- v2 - Consists of twelve repeatable, consistent documented processes or functions for improving IT Service Management and Delivery
- Focuses on the IT Operations and Infrastructure functions
- OGC contracted with EXIN and IBEG to maintain and publish libraries and develop/administer the ITIL certification program for three levels of individual certifications for v2:
  - IT Foundation Certification
  - ITIL Practitioner’s Certification
  - ITIL Service Manager Certification
- Standardized approach and terminology
- Streamlines IT service management and deliver and improves quality (reduces costs, improves customer satisfaction and improves compliance)

Overview of ITIL (IT Infrastructure Library) Processes – v2

A framework consisting of twelve repeatable, documented processes for improving IT Service Management and Delivery to reduce costs and improve customer satisfaction, service and compliance. The Configuration Management process and resultant data base, is one of the key components of ITIL, which supports several other ITIL processes, including availability, capacity, incident, problem, change and release management.
The IT Service Management Lifecycle (ITIL v3) – Issued in 2007

OGC (UK) licensed APMG to maintain v3 administer the v3 administration process.

ITIL Version 3 – Qualification and Certifications

The ITIL version 3 certification framework has been significantly revised to reflect the service lifecycle approach. The new scheme recognizes the value of existing v2 qualifications and introduces a system that enables an individual to gain credits for both ITIL v2 and v3 courses. The ITIL v3 certification will be based on the following structure which will culminate in the award of the ITIL diploma in IT service management.
Incident Management Process Deliverables

- Process Roles, Responsibilities & Ownership  
- Policies  
- Process Workflow  
- Process Activities and Work Instructions  
- Templates and Report Design  
- Prioritization and Escalation Attributes and Procedures  
- Incident Closure  
- Monitoring and Control Procedures  
- Key Metrics  
- Communications Plan and Notifications

COBIT ® (Control Objectives for Information and Related Technology)

- Developed by the IT Governance Institute (ITGI®), COBIT 4.0 provides a control framework linking 34 IT processes (e.g. define a strategic IT plan; define the information architecture, ensure continuous service, etc.) to four (4) domains – planning and organization; acquisition and implementation; delivery and support and monitoring all of which are related to specific IT resources and metrics. COBIT was originally released by the IT assurance and audit community and still has that orientation. COBIT 4.0 was released in late 2005.

- The Information Systems Audit and Control Association (ISACA®) works closely with ITGI and provides several individual certifications: Certified Information Systems Auditor™ (CISA®) and Certified Information Security Manager (CISM®).

- COBIT consists of a checklist of processes relating to IT governance. COBIT does not provide detailed policies, processes and procedures as to how to do the processes on the checklist. That is the responsibility of each organization.

- Several groups are in the process of initially aligning COBIT with other standard frameworks such as ISO 20000(ITIL) and ISO 17799 (Information Security).

By addressing these 34 high-level control objectives, the business process owner can ensure that an adequate control system is provided for the IT environment.

---

### IT Security Framework

**IT Security Framework – should consist of at least the following components:**

- Security policy
- Organizational security
- Asset classification and control
- Personnel security
- Physical and environmental security
- Access control
- Business and IT continuity management
- Compliance
- Data and document security
- System development and maintenance

- **Security Domains** – There are 9 security (policy) domains which are used to develop strategy, execute plans and track progress:
  - Information Security Organization
  - Risk Assessment and Asset Classification
  - Operating and Architectural Controls
  - Personnel Security
  - Physical & Environmental
  - Access Control
  - Systems Development & Maintenance
  - Monitoring Compliance
  - Business Continuity
  - Wireless Communications
  - Security Incident Management

*Note: ISO 17799 is intended to be used with ISO/IEC 27001 & integrates the process based approach of ISO’s management systems standards, including the Plan-Do-Check-Act cycle and requirement for continual improvement.*

- **Security Levels** – There are 6 security (policy) levels which are used to develop policies, procedures and documentation:
  - Information Security Policy Statement
  - Information Security Policies
  - General IT Standards
  - Supporting Documents, Templates & Forms
  - Security Awareness (Marketing) Material and Training

**COBIT and ISO 17799 are complementary:** COBIT represents a broader framework to improve IT controls, while ISO 17799 tends to focus on more details in IT security.
Security Levels – There are 6 security (policy) levels which are used to develop policies, procedures and documentation - Information Security Policy Statement; Information Security Policies; General IT Standards; Minimum Security Guidelines, Security Procedures & Security Guidelines; Supporting Documents, Templates & Forms and Security Awareness (Marketing) Material and Training.

ISO/IEC 27001 IT Security Management Systems – The purpose of ISO/IEC 27001 is to help organizations establish and maintain an information security management system (ISMS). It is designed to be used for certification purposes. While ISO/IEC 27001 lists a set of control objectives and controls, which came from ISO/IEC 17799, ISO 17799 also provides implementation guidance. ISO/IEC 27001 is aligned with ISO 17799. Many organizations use both standards to develop and improve their information security management environment, policies, processes and controls.

Baldrige Award Criteria for Performance Excellence Framework

- Leadership – values, direction and performance expectations
- Strategic Planning – process for how an organization develops strategic objectives, investment priorities and action plan
- Customers and Market Focus – determine customer and market preferences
- Human Resource Focus – motivate and develop employees
- Process Management – develop and improve business processes
- Business Results – measure results in terms of balanced metrics such as financial, customers, innovation, learning and operational and process performance
The IT Services Qualification Center at CMU

*eSCM – The New Standard for Organizational Sourcing Certification*

- ITsqc creates capability models and qualification methods to improve sourcing relationships in the Internet-enabled economy

- ITsqc developed the eSourcing Capability Model for Service Providers (eSCM-SP) v2 for three purposes:
  - It helps IT-enabled sourcing service providers appraise and improve their ability to provide high quality sourcing services
  - It gives them a way to differentiate themselves from the competition
  - Prospective clients can evaluate service providers based on their eSCM-SP level of certification and practice satisfaction profile

- ITsqc developed the eSourcing Capability Model for Clients (eSCM-CL) which represents best practices for clients to use to manage their sourcing initiatives

*Adapted from CMU slides*

**eSCM Structure**

- 84 Practices
- Each practice has three dimensions
  - Sourcing Life-Cycle
    - On-going (spans entire life cycle)
    - Initiation (negotiation, agreement, deployment)
    - Delivery (delivery of service)
    - Completion (transferring responsibility back to client)
  - Capability Area
  - Capability Level
On-Going Life Cycle Practices (some examples)

• Managing and motivating personnel
• Managing relationships
• Measuring and reviewing performance
• Managing information and knowledge systems
• Identifying and controlling threats
• Managing the technology infrastructure
• Managing new product development and commercialization

Capability Areas 10 Logical groupings of the 84 practices

• Knowledge Management
• People Management
• Performance Management
• Relationship Management
• Technology Management
• Threat Management
• Contracting
• Service Design & Deployment
• Service Delivery
• Service Transfer

On-going practices

Initiation

Initiation

Delivery

Initiation and Completion
Capability Levels - 5

- Level 1 - Providing Services
- Level 2 – Consistently Meeting Requirements
- Level 3 – Managing Organizational Performance
- Level 4 – Proactively Enhancing Value
- Level 5 – Sustaining Excellence

Uses of eSCM

- Clients of service providers
  - Use eSCM evaluations to determine provider capabilities
  - Evaluate multiple potential providers
  - Reduce risks in sourcing relationships
  - Managing the sourcing function and life cycle

- Service providers
  - Systematically assess their existing capabilities and implement improvement efforts
  - Use results to set priorities for improvement efforts
  - Implement in conjunction with other quality initiatives
  - Improve their relationships with clients
  - Demonstrate their capability to clients through Certification

Adapted from CMU slides
Certification – 1 – Organizational Certification

• Professionals trained by Carnegie Mellon from authorized organizations perform evaluation for certification
  – Authorized lead evaluators and evaluators on website
  – First evaluation for certification was completed 4Q04

• Carnegie Mellon’s Certification Board reviews data

• Board issues certificates for service providers indicating:
  – Span of organization being certified
  – Duration of certification (typically 2 years)
  – Service(s) being certified

• Carnegie Mellon website displays list of Certified Providers

Certification 2 – Issues certification for quality and compliance

Certification 3 - Research and measurement opportunities

IAOP* – International Association of Outsourcing Professionals – Setting the Standard of Excellence Across the Profession and Industry
Certified Outsourcing Professional (COP)

Program Objectives:

• Establish a common, globally-recognized standard for the experience and knowledge outsourcing professionals should possess. (Individuals are certified)

• Define the process for professionals to demonstrate they possess the requisite capabilities.

• Create a highly-coveted professional designation distinguishing the field’s leading practitioners.

*International Association of Outsourcing Professionals
www.outsourcingprofessional.org
Certified Outsourcing Professional (COP) Program

Setting the Standard for Excellence

(1) Outsourcing Professional Body of Knowledge (OPBOK)
Generally accepted set of knowledge and practices applicable to the successful design, implementation, and management of outsourcing contracts.

(2) Outsourcing Professional Standards
Set the evaluation criteria used to determine that professionals possess requisite experience and knowledge as defined in the OPBOK.

(3) Guide to Becoming a Certified Outsourcing Professional (COP)
Documents the steps required to obtain and maintain certification as a Certified Outsourcing Professional (COP).

(4) Certified Outsourcing Professional (COP) Preparation Class
3-hour preparation class that takes an individual through the requirements and process for becoming a Certified Outsourcing Professional (COP).

(5) Certified Outsourcing Professional (COP) Master Class
4-day program for experienced individuals providing a structured, intensive training program covering the OPBOK.

(6) Outsourcing Professional Course Catalogue
An online resource indexing accredited training programs that deliver against the knowledge and practices defined in the OPBOK.

(7) Certified Outsourcing Professional (COP) Award Package
Award certificate, guidelines for use, and applicable requirements and forms for keeping COP designation current.

Summary and Implications for Improving IT Governance

- There are a growing number of continuous process improvement frameworks and models
- All of them focus on helping either individuals and/or organizations improve their effectiveness, competencies and maturity levels.
- The selection of a particular framework or combination of frameworks is largely dependent on the strategic objectives, available resources of an organization and their desired outcomes. All of the frameworks require the management of change and cultural transformation (see Appendix - Change Acceleration Framework)
- An organization should leverage, adopt and integrate those models or parts of models that apply to creating a more robust and comprehensive IT governance roadmap
- Clearly define the roles and responsibilities for IT governance development and ownership and continuous improvement
- Use technology to enable the processes

A flexible, yet integrated IT governance framework will provide an appropriate roadmap to steer a more effective journey towards a higher level of IT maturity.

3.0 Business/IT Alignment Excellence

IT alignment, like governance, is a journey, not a destination. It takes many small things to make it a success and not one big thing.
Objectives

- Identify the principles for effectively aligning IT to the business
- Illustrate business and IT strategy & plan development frameworks
- Provide a high level flow of business/IT planning through execution
- Describe IT Investment and Governance Steering and Governance Board(s) – Roles and Responsibilities
- Discuss Investment Portfolio Management and criteria for analysis, selection, prioritization and funding of IT initiatives
- Describe the Engagement Model to establish and optimize IT/Business relationships, work flow requests and trusts
- Identify Balanced Score Card Metrics that help to measure alignment

The Board’s Role in Driving Business/IT Alignment (& Executive Management)

- Assess that IT strategy is aligned with the organization’s strategy
- Evaluate whether IT is delivering against the strategy through clear objectives, expectations and key performance indicators (KPIs)
- Direct IT strategy by determining the level of IT investments, balancing the investments between growing the enterprise and supporting the on-going operations of the enterprise
- Ensure an open and collaborative culture between IT and the business

Different levels of management and users perceive the value proposition of IT differently. This also suggests that measuring the impact of an IT investment at the bottom is much easier than at the top.

![Diagram of IT/Business Alignment]

**Figure 3.1 – IT/Business Alignment Maturity Assessment Template**

<table>
<thead>
<tr>
<th>Level</th>
<th>Phase</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>Optimized Process</td>
<td>There is advanced understanding of IT and business strategy alignment. Processes have been refined to a level of external best practices, based on results of continuous improvement and maturity modeling with other organizations. External experts are leveraged, and benchmarks are used for guidance. Monitoring, self-assessment, and communication about alignment expectations are pervasive.</td>
</tr>
<tr>
<td>4</td>
<td>Defined and Managed Process</td>
<td>The need for IT and business strategy alignment is understood and accepted. A baseline set of processes is defined, documented, and integrated into strategic and operational planning. Measurement criteria are developed, and activity is monitored. Overall accountability is clear, and management is rewarded based on results.</td>
</tr>
<tr>
<td>3</td>
<td>Repeatable Processes</td>
<td>There is awareness of alignment issues across the enterprise. Alignment activities are under development, which include processes, structures, and educational activities. Some strategy alignment takes place in some business units but not across the entire enterprise. Some attempts are made to measure and quantify the benefits.</td>
</tr>
<tr>
<td>2</td>
<td>Initial Processes</td>
<td>There is evidence that the organization recognizes the need to align IT and business strategy. However, there are no standard processes. There are fragmented attempts, often on a case-by-case basis within individual business units.</td>
</tr>
<tr>
<td>1</td>
<td>Ad hoc</td>
<td>There is a complete lack of any effort to align IT and business strategy. IT functions in a purely support role.</td>
</tr>
</tbody>
</table>

Principles for Aligning IT to the Business More Effectively

- **Value Proposition of IT** - Clearly define and relate the value that IT provides in support of the Business. This will vary by management levels within enterprises and the accuracy of the measurements (e.g. Revenue growth, cost reduction/containment, competitive advantage, strategic positioning, business continuity, regulatory compliance, speed to market, etc.)

- **Strategic Planning Programs** - Develop a strategic IT plan that is an integral part of the strategic business plan
  - **Executive Steering Committee** - involves top management in the IT/Business planning process to establish overall IT direction, investment priorities and address enterprise wide issues.
  - **Investment Portfolio Management, Capital Budgeting & Allocations** – establishes the approach and criteria for consistently analyzing, selecting, prioritizing, allocating and authorizing investment capital and expense levels to IT at the enterprise, business unit and functional levels to both grow the business and keep the lights on.
  - **Performance Management and Measurement** – monitors strategic plan outcomes based on specific MBO (Management by Objectives) categories (e.g. Financial, Customer Satisfaction, People Development, Quality, Service Levels, etc.) and establishes organizational and functional accountability.

Principles for Aligning IT to the Business More Effectively (Cont’d)

- **Management Control Programs** – focus on the tactical and operating plans and programs
  - **Formalize multi-level IT/Business Functional/Operations/Technology Steering and Governance Boards with specific roles and decision rights in the day-to-day implementation and service management of the tactical IT plans and programs.**
  - **Tactical/Operating Plans** – establishes annual and near term IT objectives, programs and the resources to accomplish the objectives (e.g. application development plan, infrastructure refresh plan).
  - **Portfolio Management** - Ensures that all programs, projects and IT service management investments are evaluated, prioritized, funded, approved and monitored using a consistent process and a common set of ranking criteria.
  - **Budget/Accounting/Charge-Back** – establishes budgets and monitors expenditures; charges IT back to the business or functional users to assure more effective involvement and ownership.
  - **Performance Management** – Collects, analyzes and reports on performance of results against objectives at a more detailed and operational level than at the strategic plan level (see Performance Management module).
Principles for Aligning IT to the Business More Effectively (Cont’d)

- **Supplementary Programs (at all levels)**
  - **IT/Customer Engagement (Relationship) Model** - Establishes a customer focused relationship model to facilitate interfaces, decisions, resolution of issues, communications and builds trust between IT and the business.
  - **Program Management Office** – establishes the processes, tools and IT/Business unit roles responsibilities for program and project management.
  - **Marketing, Public Relations and Communications Program for IT** – promotes executive, management and employee education and commitment to the value of IT.
  - **IT Charter** – promotes effective and definitive interaction and links between IT and the business/functional groups they support.
  - **Standards and Guidelines** – adopt and maintain best practice standards and flexible guidelines to describe and document IT processes, policies and procedures.
  - **Organizational Development, Skills and Competencies** – develop a proactive learning environment and encourage/reward education, training and certification (where appropriate).
- **IT Performance Metrics** - Evaluate IT performance using balanced scorecard metrics for each component of the IT governance process.
IT Investment – Key Value Proposition &/or Alignment Questions  Executive Summary

**Strategic Questions** - Are we doing the right thing? Is the Investment:
- In line with our business vision?
- Consistent with our business principles, plan and direction?
- Contributing to our strategic objectives and sustainable competitive differentiation?
- Providing optimum value at an acceptable level of risk?

**Value Questions** – Are we getting the benefits?
- A clear and shared understanding and commitment to achieve the expected benefits.
- Clear accountability for achieving the benefits which should be linked to MBOs and incentive compensation schemes.
- Relevant and meaningful metrics.
- An effective benefits realization process and sign-off.

**Delivery and Execution Questions** – Are we deploying well and effectively?
- Scalable, disciplined and consistent management, governance & delivery processes
- Appropriate and sufficient resources available with the right competencies, capabilities and attitudes
### Information Technology Strategic Planning Cycle (Illustrative Example for a Manufacturing Company)

**Steps**

**Preparation**
- Determine readiness to plan
- Raise awareness of technology challenges
- Identify Executive Sponsor
- Identify planning team
- Identify information needed for planning
- Determine planning timeline
- Determine how to best align IT plan and direction
- Review business/organization
- Identify information needed for planning

**Development**
- Conduct validity session
- Develop a draft IT vision statement
- Develop a draft set of IT guiding principles
- Seek input from and communicate with constituencies

**Agreement**
- Identify internal and external factors that describe the current and near-future (5 years) environment
- Develop assumptions
- Seek input from and communicate with constituencies

**Review**
- Identify goals, objectives and strategies to meet future needs
- Identify key performance indicators to measure objectives
- Seek input from and communicate with constituencies

**Implementation**
- Validate alignment of all plan elements with organizational goals and objectives
- Write draft of plan
- Submit draft to Steering Council for review
- Incorporate gaps, conflicts and add plan
- Submit final plan
- Approve plan

**Ongoing Evaluation**
- Assess progress semi-annually
- Identify accomplishments
- Identify areas for improvement

---

### Information Technology Strategy and Plan Development Framework

**Situation Assessment**
- Internal Capabilities & Core Competencies
- Business Plan/Strategy
  - Mega-Trends
    - Industry/Global
    - Suppliers/Vendors
    - Customers
    - Channels
    - Technology
    - Life Styles
    - Business Strategic Plan (Capital/Expense Ranges)
    - SWOT
      - Strengths
      - Weaknesses
      - Opportunities
      - Threats
      - Gaps

**Strategic Alternatives**
- Alternatives/Priorities
  - Customer Needs
  - Key Assumptions
  - New Applications
  - Development Infrastructure/Operations
  - Architecture
  - Security
  - Web & E-Commerce
  - People
  - Vendors
  - Outsourcing
  - Compliance

**Vision Statement**
- Goals, Objectives and Metrics
  - Quantitative and Qualitative

**Why do we want to be? (in customer value terms)**

**Strategic Imperatives to Achieve Vision/Goals**

**Action Initiatives**
- Architecture
- Data Models; DBMS
- Relationship Model
- Customer Service/Help Desk
- Make versus Buy
- Applications & Business Process Impacts
- Outsourcing
- Standards & Guidelines
- Education, Training, Roles – Users, Mgrs, Tech

**Why we have a Right to our Vision?**

**Why Doable? What Could/Should we do?**

**The 5-7 Core Items We Must Build/Do to Win**

**How did we get there?**

Key Principles for Effective Business/IT Strategic Alignment & Planning

IT Plans Must Be Developed Iteratively with the Business & Updated as Necessary

- **Ownership** - CIO with involvement of IT Leadership & of the Executive Officers & Business Unit Leadership
- **Frequency** – IT Strategic Plan is written/revised/refreshed annually, although major changes may cause the plan to be updated more frequently
- **Time Horizon** – IT Strategic Plan usually covers a 3 year period with annual operating plans identifying capital and expense budget levels for first year of plan cycle
- **Plan Process** – IT reviews the Business Strategic Plan major objectives, themes and priorities with the Business Units and Corporate Services
  - IT interviews the business units to align and map IT objectives, initiatives and priorities with the business, using the key plan questions and discussion topics
  - IT identifies major new or enhancement business application or service support initiatives as well as significant technology refresh requirements (e.g. replace obsolete technology; support anticipated growth and new infrastructure requirements) using the Business/IT Strategic Plan Initiative Alignment Template
  - Both the business-driven initiatives and the infrastructure initiatives are combined in the IT Strategic plan (which includes a rough estimate of capital funding needs) and presented to the Executive Operating Committee and SBU Heads for approval

Key Principles for Effective Business/IT Strategic Alignment & Planning (Cont’d)

IT Plans Must Be Developed Iteratively with the Business & Updated as Necessary

- **Communication of the IT Strategic Plan** – A short version of the plan is posted on the IT web intranet sight and reviewed with the IT department & appropriate business constituents
- **Link to Annual Operating Plan Budget Plan** - The annual capital and expense budget are approved by the Executive Team for the initiatives identified in the plan. Often, new or break-fix initiatives come up during the year (not in original plan) that require prioritization, funding & resources. A formal portfolio investment management approval process is implemented for that purpose.
- **Link to Portfolio of Projects for Annual Operating Plan** – Once the annual operating plan and budget have been approved, a project list and related business cases are prepared, prioritized and reviewed. Projects charters are developed for approved projects and the appropriate implementation resources are allocated and/or committed.
- **Link to Annual MBOs (Management by Objectives), Performance Measurements, KPIs and Rewards/Incentives** – Both the strategic plan and annual operating plan must be driven by measurable outcomes or results (e.g. cost, time, profit, volume, customer satisfaction, strategic competitive value, etc.) and appropriate management actions taken according to positive or negative target variances.
Key Select Business/IT Strategic Alignment Questions and/or Discussion Topics*

• What information is critical to support the strategic business plan initiatives and objectives?

• What changes in business direction (and priorities) are planned or anticipated for the plan period?

• What are the current/projected major business/functional opportunities, issues, risks, vulnerabilities and constraints?

• What strategic or tactical value does IT provide to your business or function?

• How can IT add more strategic value (e.g. revenue growth; cost reduction/containment/avoidance, reduce speed to market, business process transformation, business/competitive intelligence, etc.) to the business?

• Is the business satisfied with the level of IT service provided?

• What is going well? What is not going well?

• How is IT performance measured? What key performance measures should be used and that are meaningful to the business?
Key Select Business/IT Strategic Alignment Questions and/or Discussion Topics (Cont'd)

- Is IT developing and maintaining superior and constructive relationships with customers, vendors and others? How can they be improved?

- Is IT delivering projects and services on time, within scope, within budget, with high quality and to the customer’s satisfaction?

- Is IT staffed adequately, with the right skills and competencies?

- Is IT compliant with laws and regulations?

- How does IT performance compare to other best practice organizations?

- How is IT managing and planning for business/IT continuity, contingencies, disasters, security, risks and back-up?

- How effectively is IT in communicating its progress and problems to its constituents? Is a relationship/engagement model used?

What governance processes & controls have been instituted in IT?

- Does the Board/Operating Committee/Senior Business leadership review and approve the IT strategy, priorities and funding?

## Business Plan Organizational Elements*

### Section 1. Executive Summary
- Business proposition
- Current status of enterprise
- Market need being met
- Enterprise’s product/service advantage(s)
- Management expertise
- Financials

### Section 2. Vision, Mission and Strategic Objectives

### Section 3. Marketing Plan
- Market/Industry Analysis
- Product/Service Offerings and Commercialization
- Market Segments
- Competitive Situation
- Pricing
- Channels of Distribution
- Promotional, Advertising and Communications Plan
- Customer Service
- Positioning Strategy
- Alliances and Partners
- Value Proposition
- Brand Management

### Section 4. R & D, Innovation, IT Operations and Manufacturing/Operations Plan
- New Product Research and Development
- Make versus Buy Decisions
- Product Support
- Quality Control and Assurance
- Logistics and Transportation
- Supply Chain Management
- Capacity Planning
- Innovation Planning
- IT Development, Support and Operations

### Section 5. Human Resources Plan
- Management team background & requirements
- Positions/Employee skills and competencies
- Training and special people issues
- Succession Planning

### Section 6. Risk Analysis
- Business Risks
- Economic Risks
- Customer/Competitor Risks
- Technology Risks
- Business Continuity and Disaster Prevention and Recovery Risks

### Section 7. Financial Plan
- Income Statements (Actual and Pro Forma)
- Balance Sheet (Actual and Pro Forma)
- Cash Flow Statement (Actual and Pro Forma)
- Capital Budget (Actual and Pro Forma)

## IT Strategic Plan Outline (Illustrative Example – Bank)

1. Objectives of Document
2. Executive Summary
3. Previous IT Plan Strategies, Accomplishments and Status (including a SWOT and Gap Analysis)
4. Corporate Strategy Map and Major Business Initiatives
5. Business Unit Strategies (all include Current and Target State) (New and Revisions to IT Applications are Identified)
   - Retail Banking
   - Commercial Banking
   - Real Estate
   - Shared Services
     - Human Resource
     - Finance
     - Legal
     - M & A and Planning
     - Bank Operations
6. IT Infrastructure Strategies (Technology Refresh and New Requirements)
7. Principles of IT
8. IT Financials (mostly capital requirements as well as multi-year project budgets)
IT Strategic Plan Outline (Illustrative Example – Major University)

1. Executive Summary
2. IT Vision and Mission
3. Where we are today: The Scope of the Challenge
4. Competitive Challenge (Comparison to Other Best Practice Organizations on Multiple Levels)
5. Aligning IT with University’s Strategic Goals
6. Strategic Goals and Initiatives
   Strategic Programs
   IT Governance
   Customer Relationship Management
   Courseware
   Alumni
   Process Excellence
7. Financials (High Level) – These are linked to first year of the annual operating plan and budget
8. Appendices
   Competitive Analysis
   SWOT Analysis
   Major Risks and Risk Mitigation
   IT Governance – Roles, Responsibilities and Ownership
   IT Guiding Principles
   Decision Rights

IT Strategic Plan Outline (Illustrative Example)

1. Executive Summary
2. Introduction and Background
   - Purpose & Objectives
   - Plan Methodology and Team
   - Business Vision, Objectives and Strategies
   - IT Vision, Objectives and Strategies
3. Situation Assessment (Where are we? – Reference Base)
   - External Trends – Technology, Environment, Economic, Life-Style, Markets & Customers, Regulatory, Competition, etc.
   - Internal Pressures – CEO, Business Units, Functional Departments, Employees, Unions, etc.
   - IT Organization Profile – Organization, Staffing and skills; User Needs and Satisfaction; Level of Maturity; Revenue/expense profile; Infrastructure profile; application profile; Core Competencies; Strengths & Weaknesses
4. Major Business/IT Gaps, Needs, Opportunities and Alternatives (Why Change? What Could We Do?)
   - Macro Assessment of Needs (Discretionary and non-Discretionary) and Opportunities by Company, Business Units and Key Functional Areas
   - Macro Assessment of Costs, Benefits, Value, Risk (of doing and not doing) and Priorities (by Company, SBU’s and Key Functions)
   - Infrastructure Alternatives
   - Architecture Alternatives
   - Application Alternatives
   - Organization/Control/Administration
   - People Development
   - Business IT Continuity, Security and Backup
5. Strategies and Actions (What Should We Do? How Do We Get There?)
   - New Enhancement Applications
   - Maintenance
   - Discretionary projects
   - Non-Discretionary support activities
   - Architecture Direction
   - Infrastructure Direction
   - Resource requirements
   - Contingency, Security, Risk & Disaster Recovery
   - Governance & Compliance
6. Financials
   - Capital and expense
   - Headcount
7. Plan Execution (Did We Get There?)
   - Critical Success Factors
   - Key Performance Indicators and Report Cards

IT/Business Alignment

4. Conf’d
   - Build versus buy (Outsourcing)
   - Funding levels and prioritization
   - Standards and Compliance
   - Governance policy and process
5. Strategies and Actions (What Should We Do? How Do We Get There?)
   - New Enhancement Applications
   - Maintenance
   - Discretionary projects
   - Non-Discretionary support activities
   - Architecture Direction
   - Infrastructure Direction
   - Resource requirements
   - Contingency, Security, Risk & Disaster Recovery
   - Governance & Compliance
6. Financials
   - Capital and expense
   - Headcount
7. Plan Execution (Did We Get There?)
   - Critical Success Factors
   - Key Performance Indicators and Report Cards
**IT Plan Presentation Template**

### PHASE 1: Where are we? (current situation: Assessment or baseline)
- **External**
  - Technical trends/pressures
  - Regulatory pressures
  - Environmental trends/pressures
  - Competitive pressures
  - Economic pressures
  - Customer pressures
- **Internal**
  - Corporate (CEO) pressures
  - User pressures
  - Employee pressures
  - Business unit pressures
  - Legal pressures

#### Current state profile - Baseline
- General/Costs
- IT Architecture
- IT Infrastructure
- Process Maturity
- Organization & Staff: Bench Strengths, Number, Skills, Competencies, Succession Planning
- Strengths/Weaknesses
- Gaps

### PHASE 2: Why change?
**Issues:**
- What are major issues?
- What are major opportunities?
- What are major risks and threats?

### PHASE 3: What could we do?
**Strategic alternatives**
- Economics
- Feasibility
- Legal

**Opportunities, impact**

**Top management vision, objectives**

### PHASE 4: What should we do? How should we get there?
**Implementation strategies and recommended action programs**
- Imperatives, initiatives
  - Growth, cost, transformation, etc.
  - Priorities
  - Funding
  - Milestones
  - Ownership, accountability

### PHASE 5: Did we get there?
**Validation, measurement, control & corrective actions**

---

**The Five Stages of IT Investment Management Maturity**

**IT/Business Alignment**

This framework can be used by organizations and provides a roadmap for achieving higher levels of IT investment management alignment and maturity.

<table>
<thead>
<tr>
<th>Enterprise and Strategic Focus</th>
<th>Maturity Stages</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Project-centric</td>
<td>Stage 5: Leveraging IT for strategic outcomes</td>
<td>The organization has mastered the selection, control, and evaluation processes and now seeks to shape its strategic outcomes by benchmarking its IT investment processes relative to other &quot;best-in-class&quot; organizations.</td>
</tr>
<tr>
<td></td>
<td>Stage 4: Improving the investment process</td>
<td>The organization is focused on evaluation techniques to improve its IT investment processes and portfolio(s), while maintaining mature selection and control techniques.</td>
</tr>
<tr>
<td></td>
<td>Stage 3: Developing a complete investment portfolio</td>
<td>The organization has developed a well-defined IT investment portfolio using an investment process that has sound selection criteria and maintains mature, evolving, and integrated selection, control, and evaluation processes.</td>
</tr>
<tr>
<td></td>
<td>Stage 2: Building the investment foundation</td>
<td>Basic selection capabilities are being driven by the development of project selection criteria, including benefit and risk criteria, and an awareness of organizational priorities when identifying projects for funding. Executive oversight is applied on a project-by-project basis.</td>
</tr>
<tr>
<td></td>
<td>Stage 1: Creating investment awareness</td>
<td>Ad hoc, unstructured, and unpredictable investment processes characterize this stage. There is generally little relationship between the success or failure of one project and the success or failure of another project.</td>
</tr>
</tbody>
</table>

Source: GAO.
**Strategic IT Investment Alternatives** (Illustrative Example)

IT Investment Management Portfolio Alternatives Consist of Discretionary (Optional), Strategic and Mandatory (Keep the Lights ON) Requirements and the Amount of Investment % in Each Portfolio Should be Driven by Business Needs and Will Change from Year to Year.

**Portfolio Investment Management**
- Define investment criteria to evaluate, prioritize and authorize investments
- Manage, monitor and govern the overall portfolio performance
- Analyze the alternatives
- Assign clear accountability, ownership and decision rights

**Business Case Development**
- Opportunity or Problem Drivers
- Objectives
- Assumptions
- Costs/Benefits
- Risk, financial returns, strategic, alignment or other (compliance) scores

**Execution Management**
- Program/Project Management
- Service Management and Delivery
- Business Process Enabled Changes
- Benefits Realization and Key Metrics

**Value Proposition Processes for IT Investments**
*IT/Business Alignment*

**Key IT Investment Process Areas** are Portfolio Investment Management, Business Case Development and Execution Management.

**Legend:**
- Discretionary
- Non-discretionary

Portfolio Investment % in specific portfolios will vary by organization.
Key selection metrics: new/incremental revenues, ROI, strategic fit, intellectual capital, risk, customer requirement, regulations, cost reduction/avoidance/containment.

Flexible and scalable processes and tools required to effectively manage multiple, interrelated projects which range from “fast track” to “full risk mitigation.”

High visibility, large funding, complex, strategic, >6 months, high risk, etc. (Examples: enterprise-wide ERP; e-Business; complex new product or solution delivery; enterprise architecture; M and A;)

Standalone, limited scope projects or projects which are interrelated and part of a program.

Flexible and scalable processes and tools are used for development, but life cycle tasks will vary by project type (e.g. IT, eBusiness, new product, M and A etc.)

Evaluation, selection, prioritization and funding of imperatives and initiatives

IT Engagement (Relationship) Model to Improve & Sustain VOC

- IT must become more customer-centric and marketing oriented to develop closer and better relationships with the business.
- A growing number of enterprises have instituted an IT Engagement (Relationship) Model

Goals of the IT Engagement Model:

- **Single Point of Contact** – Establish a single point of contact between IT and the Business to build a better partnership and collaboration between IT and the business
- Define standard, enterprise-wide **Rules of Engagement** for acquiring IT services
- Clarify roles, responsibilities and accountabilities for plans, budgets, work requests and issues resolution
  - Within IT
  - Between IT and business
- Improves service delivery through a consistent process for engaging the right people at the right time using a consistent set of people

Business/IT Engagement and Relationship Model

Illustrates the roles and responsibilities of the business and IT to develop a more collaborative environment at multiple levels. This is customizable for any organization

*Relationship Manager = Interface to the Customer*
## Business/IT Engagement and Relationship Model (Cont'd)

<table>
<thead>
<tr>
<th>Role</th>
<th>Responsibilities</th>
</tr>
</thead>
</table>
| **Customer**                | • Initiates request/project with Relationship Manager  
• Develops and approves Business Case  
• Approves Statement of Work and Requirements  
• Approves deliverables from a business perspective  
• Participates in governance, business issue(s) resolution and user training  
• Conducts and approves user acceptance testing and operational service levels  
• Participates in post-implementation review/assessment |
| **Relationship Manager (RM)** | • Serves as the primary POC (Point of Contact) between the customer/process owner and IT  
• Develops Service Level Agreements (SLAs) and other KPIs with the customer/process owner  
• Ensures that appropriate authorizations and funds are obtained and available for all requests  
• Ensures projects follow the Change and Release Management process |
| **Business and Technology Analyst (BTA)** | • Collaborates with Relationship Manager and customer/process owners to identify opportunities for exploiting technology to achieve strategic business advantage  
• Has responsibility for the overall technology design of a given system:  
  – Oversight and direction for architectural decisions  
  – Consultative support during infrastructure deployment  
• Ensures that technology decisions conform with Enterprise Architecture guidelines  
• BTA coordinates status, activities and deliverables with the Lead PM |
| **Operations/Service Manager (OM)** | • Coordinates and provides operational oversight for technical infrastructure components and projects in support of the Relationship Manager or the business  
• Provides accurate reporting of progress for all technical components of projects  
• Conducts and approves operational acceptance testing prior to steady-state implementation  
• Tracks configuration, release controls, help desk services and operational continuity |

---

<table>
<thead>
<tr>
<th>Role</th>
<th>Responsibilities</th>
</tr>
</thead>
</table>
| **Project Manager (PM)**    | • May be the Relationship Manager  
• Project Manager is responsible for the deliverables and coordinates project activities, status and deliverables with the Project Team and provides status reports |
| **Industry (Vendor) Partner Project Lead (IPPL)** | • Project Lead coordinates project activities, status and deliverables with the Project Team and provides status reports to Project Manager  
• Manages day-to-day project activities  
• With the Project Manager, responsible for managing deliverables |
### Financial Services Organization

**Environment**
- Asset range - $15 – 25 Billion
- Number of Employees – 3,000 – 5,000
- Number of IT Employees – 150 – 300
- Very competitive industry with many mergers and consolidation
- Conservative management (risk averse)
- High use of technology for product delivery and to business unit support
- CIO reports into President and CEO and is a member of the Executive Management Team

**Approach**
- Adopted COBIT as the general framework to guide IT process improvements for development and operations.
- Identified 12-14 COBIT IT process areas and assigned each process to one or more IT managers to develop, implement and own.
- Adopted ISO 17,799 framework for IT security
- Executive Capital Committee approves major investment funding
- IT Steering Committee (business and IT) establishes IT priorities, reviews progress and approves major changes

**Issues and Challenges**
- Align IT more closely with the business
- Increase profitability and growth
- Make IT more customer facing and focused
- Facilitate and sustain compliance requirements

**Approach (Cont’d)**
- Issued general IT principles or vision which guide how IT is managed (e.g. trust, flexibility, speed, transparency [IT is transparent to business])
- Established decision authority over major IT decisions with definitive parameters, roles and responsibilities for such items as funding approvals, architecture, security, projects
- Established a strong Project Management Office

### Financial Services Organization

**Results - Alignment**
- Capital budgeting process is linked to strategic and annual operating plan for IT and business
- IT Steering Committee assures a closer alignment of IT support for business
- Balanced scorecard and report card metrics are linked to critical success factors of business and IT (speed, financials, cost, performance, quality, etc.)
- Established an customer/IT engagement (single point of contact) model to improve relationships, build trust and focus on priorities
- Closer alignment is being improved continuously

**Results - IT Service Management & Delivery**
- A variety of metrics and tools are used to measure the efficiency, capacity and availability, utilization and service-ability of the operations and infrastructure assets and group

**Results - Program/Project Management**
- Established a PMO center of excellence staffed with certified PMPs
- Developed a flexible and scalable PM process to handle fast track and complex projects
- Educated and trained both IT and user community on PM best practices
- Created a booklet on, “How to Get Your IT Projects Approved”
- Significant improvement in delivering projects on time and within budget (20-30%)

**Results - Performance Management & Management Controls**
- COBIT & ISO 17799 are used as the frameworks to define, develop and deploy the IT management controls
- Select IT metrics are included in the company’s balanced scorecard: financial (e.g. Keep lights on spend; IT spend versus company revenues; IT spend per employee); non-financial (e.g. turnover; quality; risk mitigation index, etc.)
- Quarterly IT report card (financial; projects; production operations, etc.)
Critical Success Factors

- Executive sponsorship is critical
- CIO and executive team must be proactive and provide oversight
- IT governance must be decomposed and assigned to process owners with schedules, budgets and deliverables
- Metrics should be linked to business and IT critical success factors

Lessons Learned

- IT governance is a journey towards continuous improvement
- It is harder than you think and takes longer than you estimated
- The improvements in time, speed, flexible discipline, cost reduction, alignment and compliance are beneficial

Summary

- Different levels of management and users perceive the value of IT differently.
- Business value of IT is also more difficult to measure the higher one tries to apply metrics in an organization (e.g. Increased business profitability as a result of a technology application).
- Therefore, it is important not only to focus on measurements based on value realization (e.g. quantitative) but also to take into account the enterprise’s performance and process improvements in creating the value.
- IT/Business alignment or harmony represents a journey, is complex, multi-dimensional and never complete. However, there are IT/Business alignment principles (e.g. planning, investment portfolio management, relationship model, steering and governance boards, etc) that if implemented will help to achieve a more effective and mature alignment.
4.0 Program/Project Management (PM) Excellence

Flexible Discipline and Teamwork

Planning

Measurement

Improved Performance
(and Less Stress)

Objectives

- Provide an overview of the key principles, issues, concepts and processes for effectively managing enterprise wide and limited scope programs and projects.
- Understand the driving forces and value proposition of PM
- Review the PM maturity model and framework
- Understand how to link the IT plan to programs and projects
- Understand the mandatory and discretionary key performance indicators and metrics to manage programs and projects effectively
**Key PM Definitions**

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Program</strong></td>
<td>Consists of multiple interrelated projects and is usually large, complex and with high visibility &amp; high $</td>
<td>SAP</td>
</tr>
<tr>
<td><strong>Project</strong></td>
<td>A discrete, one-time event that consists of such attributes as time, cost, resources, risk, deliverables, etc.</td>
<td>Sap Module - Purchasing</td>
</tr>
<tr>
<td><strong>Task</strong></td>
<td>A discrete element of work</td>
<td>Order equipment</td>
</tr>
<tr>
<td><strong>Process</strong></td>
<td>A continuous work effort to support a business or IT function</td>
<td>Service Management; Service Desk; Sales Order Process</td>
</tr>
</tbody>
</table>

**Value Propositions & Benefits of Program/Project Management from Leading Organizations***

- Provided **better control of scope changes** & ensures efficient use of project dollars *(Ford)*
- Consistent & repeatable use of PM processes on a global basis **reduced project time & costs & sped up deliverables and facilitated training** *(IBM)*
- Developed a **better working relationship and communications with the customer** and other project constituents *(Nortel)*
- Aligned project initiatives and investments more effectively with **business and improved quality** *(GE)*
- **Improved** IT project accountability and documentation *(Purdue Pharma)*
- **Increased** our **customer satisfaction** *(Lucent)* by demonstrating our commitment to schedules
- Project Management **education and certification** resulted in **more cost effective and timely program/project performance and vendor (outsourcing) management** *(Federal Technology Service)*

*Based on primary & secondary current and emerging best practice research conducted by GPS Group, Inc.*
Program/Project Management is Complex & Requires Multiple Competencies

Program/Project Management

Scope/Requirements Management
Knowledge Management (Intellectual Capital)
Integration Management
Change Management
Governance & Monitoring
Vendor/Procurement Management
Life Cycle Management
Risk Management
Communication Management
Planning, Scheduling & Estimating
Quality Management
Resource/People Management/Soft Skills
PM Tools
Issues Management
Time Management
Cost Management

Major Causes of Program/Project Failures

Slow to Market
Unrealistic Expectations
Poor Project Leadership
Lack of Exec. Commitment & Support
Lack of Measurable Controls & Metrics
No Plan, No Risk Assessment, Mitigation and Contingency
Ineffective Implementation Strategy
Underestimation of Complexity
Lack of Dedi ted or Sufficient Resources
Limited Constituent Involvement
Lack of Integration with the Organization
Poorly Defined Requirements/Scope
Poor Vendor Management
The Cost of Failure

Nearly ¾ of all projects fail or run into trouble

An estimated $100 - 150 billion per year is spent on failed and cancelled projects in USA (out of a total estimated spend of $250 billion)

Successful (S) = completed on-time, on-budget and within scope

Challenged (C) = completed, but with time and/or budget overruns and fewer features than originally specified

Failed (F) = cancelled before completion

<table>
<thead>
<tr>
<th>Company Size</th>
<th>S</th>
<th>C</th>
<th>F</th>
</tr>
</thead>
<tbody>
<tr>
<td>Large</td>
<td>9%</td>
<td>62%</td>
<td>29%</td>
</tr>
<tr>
<td>Medium</td>
<td>16%</td>
<td>47%</td>
<td>37%</td>
</tr>
<tr>
<td>Small</td>
<td>28%</td>
<td>50%</td>
<td>22%</td>
</tr>
</tbody>

Select Actions to Overcome Major Project Management Obstacles

<table>
<thead>
<tr>
<th>Obstacles</th>
<th>Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Resistance to PM due to time investment</td>
<td>Create flexible and scalable PM processes with mandatory and discretionary components (e.g. “fast track” vs. “full risk mitigation”)</td>
</tr>
</tbody>
</table>
| Lack of PM value proposition awareness         | • Quantify PM benefits (time savings, quality improvements, cost reductions, customer satisfaction and create/maintain a scorecard)  
|                                                 | • Create PM advocacy groups that share information, follow uniform process and document PM value lessons learned  
|                                                 | • Market and communicate value of PM to multiple constituencies       |
| Limited support from the top                   | • Identify proactive PM executive champions and use them to persuade others  
|                                                 | • Demonstrate benefits of PM by using key metrics (e.g. improved customer satisfaction, reduced cycle time) to gain supports |
| Insufficient dedicated qualified PM resources  | • Continuous training of relevant constituencies  
|                                                 | • Reward and recognition of certification  
|                                                 | • Career path options – professionalize PM  
|                                                 | • Funding and support of “PM Centers of Excellence” |
**Executive Guide**

Executive roles/responsibilities

- Defines PM processes/tools in depth – risk, change, requirements, etc.
- Metrics, reporting and governance
- Career path, training, certification, job descriptions

**PM COE**

- Executive roles/responsibilities
- Program Management Handbook
- Project Control Handbook
- PM Prof. Development Guide
- PM Handbook
- User’s Guide

**PM Process & Tools Handbook**

- PM resource guide, quick reference, checklist
- PM Sales Brochure
- PM Sales Brochure
- Educate customers on benefits of PM

**PM Sales Brochure**

- CUSTOMERS

**EMPLOYEES**

**Program/Project Management**

**Principles for Achieving Program/Project Management Excellence**

- Create the right environment and culture:
  - Establish the appropriate organizational mindset, culture and environment
  - Obtain executive sponsorship, commitment and multi-level management buy-in
  - Obtain customer/other stakeholder/project team commitments and ownership
  - Success depends on creating a sustainable foundation (e.g. policy, process, metrics,) for managing programs and projects and integrating results and methodologies into the culture of the organization
  - Define roles - Get the right people involved in every program/project phase
  - Market and re-enforce (e.g. training, rewards, mentors, tools, flexible processes) the value and benefits of good PM practices
  - Adopt a flexible and scalable PM process (phases, templates, repository, tools) [tailor when required] to accommodate different program and project types (complexity, size, value, etc.) based on current and emerging industry best practices

- Develop program/project plans (based on a flexible and scalable process):
  - Define the project’s scope, objectives, requirements and deliverables
  - Establish well-defined phases/tasks, go/no go gates and milestones (break the job down into manageable work packages – 80 hour rule) with realistic baselines (costs, time, resources and contingencies) based on short term incremental and visible deliverables
  - Define a responsibility assignment matrix – Responsible, Inform, Consult and/or Approve
  - Establish formal change management and risk management processes

**Project Management Used as a Marketing Tool (Illustrative Example) – Telecom Company**

A Telecom company strongly supported project management disciplines and developed a series of PM documentation for different constituents. A PM sales brochure was developed for its customers that promoted the idea that by implementing a PM best practices, the customer’s benefited in many ways, including on time delivery of products.

*COE= Center of Excellence*
Principles for Achieving Program/Project Management Excellence (cont.)

- Ensure governance and excellent communications:
  - Establish a governance, control, reporting and escalation policy and process
  - Manage expectations of all stakeholders proactively
  - Identify, measure and track vital signs, metrics, key issues and take necessary actions quickly – knock obstacles out of the way
  - Establish frequent and open communications with stakeholders (both formal and informal review meetings – daily, weekly, monthly, quarterly
  - Ensure accurate, timely and meaningful monitoring and progress reporting and take decisive actions

- Institutionalize a PM policy with flexible and scalable processes
  - Create PM Centers of Excellence (e.g. Advocacy Center, Help Desk, Education, Training, Expert Help, Process, Project Tracking, Certification, etc.)
  - Create a reward and/or recognition policy to re-enforce and sustain
  - Conduct formal program/project reviews
  - Develop and use consistent, flexible and scalable PM processes (e.g. Fast Track versus Full Risk Mitigation Projects & Automate processes and tools (Web based)
  - Capture and apply lessons learned and focus on continuous improvement

Essential Skills for Program/Project Management - People and interpersonal skills are critical for success

- Project Management Science/Processes (30%)
  - Plans, WBS, Gantt Charts, Standards, CP/Precedence diagrams, Controls, Variance Analysis, Metrics, Methods, Earned Value, Risk Management, Status Reports, Meeting Agendas, Resource Estimating, Leveling, Training, Mentoring, Governance, Change Management

- Project Management Art - Soft Skills (70%)
  - Effective Communications, Trust, Integrity, Honesty, Sociability, Leadership, Values, Team Building, Flexibility, Decision making, Perspective, Sound Business Judgement, negotiations, Customer Relations, Problem Solving, Managing Change, Managing Expectations, Common Sense, Listening
Program/Project Management

Project Management Maturity Model and Roadmap – Maps PMI’s 9 PMBOK Knowledge Areas with the SEI’s CMM 5 Level Model of maturity

Levels of Project Management Maturity  
1. Initial Process
   - Project Integration Management
   - Project Scope Management
   - Project Time Management
   - Project Cost Management
   - Project Quality Management
   - Project Human Resource Management
   - Project Communications Management
   - Project Risk Management
   - Project Procurement/Vendor Management

2. Structured Process and Standards
   - Basic, documented processes for project planning and reporting.
   - Basic scope management process in place.
   - Processes exist for cost estimating, reporting, and performance measurement.
   - Basic project quality policy has been adopted.
   - Basic communications process in place that defines how to plan and manage the human resources.
   - Basic risk management process.
   - Basic procurement process for high value purchases.
   - Basic procurement process for low value purchases.

3. Organizational Standards and Institutionalized Process
   - Project management processes institutionalized with procedures and standards.
   - Project time management processes institutionalized.
   - Most organization-wide integrated into project resource library.
   - Quality process is well documented and an organizational standard.
   - Most project follow established resource management process.
   - Risk management processes are institutionalized.
   - Procurement processes are documented and used.
   - Project and purchasing department integrate in the procurement process.

4. Managed Process
   - Processes and standards utilized by all projects and integrated with other projects.
   - Decisions based on performance metrics.
   - Time management processes utilized to track project performance.
   - Communications management processes institutionalized with procedures and standards.
   - Procurement processes institutionalized.

5. Optimized Process
   - Full project management process documented and utilized by most projects.
   - Most projects institutionalized.
   - All projects required to use quality planning standard processes.
   - Resource forecasting used for project planning and prioritization.
   - Project team performance measured and integrated with corporate processes.
   - Risk management processes are institutionalized.
   - Procurement processes are institutionalized.

High Level Flow – From IT/Business Alignment, Portfolio Management, PM/SDLC & to Steady State Operations

Business Plan/Portfolio/Project/SDLC/IDLC/PDLC - Imperatives must be identified in the business plan, compete for funding (Portfolio Management), must be decomposed into programs/projects and with the application of life cycle methodologies, facilitate quality deployment and on-going IT service management and delivery

IT Demand – Planned/Unplanned

Business Plan  
Business CIO  
User  
Vendor  
Other

Investment Selection Criteria

- Key selection metrics: new/incremental revenues, share of customer's ROI, NPV, ROA, strategic fit, intellectual capital, barriers to entry (patent), degree of risk, customer satisfaction, and regulation.

Program/Project Management (Key Metrics – Time, Cost, Risks, etc)

- Flexible and scalable processes, templates, and tools required to effectively manage multiple, interrelated projects which range from “fast track” to “full risk mitigation”

Ongoing (Steady State) Operations (Key Customer, Process and Service Metrics)

- Quality  
- Purchasing  
- Engineering/Manufacturing  
- Continuous process improvement

- Legal/Contract Administration  
- Customer Service  
- Information Technology  
- Sales/Marketing

Systems/Product/Infrastructure/Outsourcing

- Development/Procurement Life Cycles (Use Case, Waterfall, and Hybrid Processes)

- Plan  
- Design  
- Develop  
- Build  
- Test  
- Implement  
- Document  
- Train

Ongoing (Steady State) Operations (Key Customer, Process and Service Metrics)

Project Management Life Cycle Phases & Key Components - Overview

- Business Need/Case
- Feasibility
- Authorization
- Funding
- Project Charter
- Project Organization
- Project Management Office (PMO)
- Critical Success Factors
- Project Metrics & Vital Signs
- Go/No Go Gate

Enterprises must develop consistent, but scalable & flexible PM processes to fit different types & sizes of programs and projects

Governance & Control Spans all Phases

IT Demand Management – Classifications (Illustrative Example) Exhibit 6

<table>
<thead>
<tr>
<th>Classification</th>
<th>Type of Request or Demand Mgmt.</th>
<th>Comments/Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mandatory (Business Enablement)</td>
<td>Service Interruption (Break &amp; Fix)</td>
<td>A problem caused the disruption of IT service and must be fixed and restored as soon as possible</td>
</tr>
<tr>
<td></td>
<td>Maintenance</td>
<td>Scheduled maintenance must be performed to keep applications and infrastructure operating efficiently</td>
</tr>
<tr>
<td></td>
<td>Keep the Lights On and Legal/Regulatory</td>
<td>The costs and resources required to support the basic steady state operations of the business, including some components of infrastructure</td>
</tr>
<tr>
<td>Discretionary* (Require ROI)</td>
<td>Major New/Change (Complex) Initiatives (Full Risk Mitigation)</td>
<td>Complex new initiatives or major changes (major enhancements or modifications) to systems, processes or infrastructure and provide new or additional functionality or capacity</td>
</tr>
<tr>
<td></td>
<td>Fast Track (New/Change) (Simple or Limited Scope)</td>
<td>Simple new initiatives and minor changes that do not required the rigor and discipline of a complex initiative and be fast tracked.</td>
</tr>
<tr>
<td></td>
<td>Standard (Repetitive) Request</td>
<td>Describe product/ service (functions, features and price and place in a product/service catalogue).</td>
</tr>
<tr>
<td>Strategic</td>
<td>Major initiative – Realistic ROI may not be doable – too early</td>
<td>A strategic initiative may fall into several categories – first market mover (new product or service); R &amp; D; competitive advantage, etc.</td>
</tr>
</tbody>
</table>

*Note: Criteria for differentiating between complex or fast track initiatives or service catalogue listings will vary for each organization.

</tr>
</tbody>
</table>

**Templates/Tools**
- Request or e-Mail
- Type/Scale Matrix
- Project Request or PIR

*PM/LC = Project Management Life Cycle*

---

**Select Criteria used to help evaluate an IT Request and Optimize Demand Management**

**Business, Technical and Financial Review Checklist**
(To be used as a guideline to assist in evaluating New or Changes in Scope Requests for IT Services)

**Technical/Interoperability/Enterprise Architecture**
- Is this a new technology? Has it been tested?
- Is it an extension or replacement of an existing technology?
- Does the proposed solution impact the approved enterprise architecture and approved infrastructure components?
- Does the solution represent a standard solution? A proprietary solution?
- Is the proposed solution independent or is it dependent on other infrastructure components?
- Does it comply with the interoperability standards and guidelines?
- Does the solution require back-up, redundancy and contingency plans?
- What degree of risk does the proposed solution pose? High? Medium? Low?
- Is the capacity of the proposed solution expandable to accommodate growth in volume? Locations? Employees? Etc.?

**Scope, Impact, Business Need and Feasibility**
- What is the scope and impact of the request? Enterprise wide? Geography? Number of People?
- Is it solution technically feasible? Economically feasible? Legally feasible?
- Is the request identified in the strategic and/or operating plan and budget?
- What is the impact of the proposed solution on the user community? High? Medium? Low?
- What business need will be satisfied by approving this request? High Impact? Low Impact? Mandatory? Strategic? Discretionary?

**Legal, Regulatory and Security**
- Is the request legal?
- Is this request ethical?
- Does this request comply with current regulatory policies and guidelines?
- Does the request comply with published security regulations and guidelines?
- As a result of this request, are new or modifications required to security regulations and guidelines?
## Program/Project/Service Request Type/Scale Matrix

### Directions:
- Calculate the matrix score by subjectively using the guidelines below to assign a number between 1 and 5 to each of the 11 factors.

<table>
<thead>
<tr>
<th>COMPLEXITY FACTOR</th>
<th>LOW (1)</th>
<th>MED (3)</th>
<th>HIGH (5)</th>
<th>NOTES</th>

</tbody>
</table>

### TOTAL PROJECT Type/Scale SCORE

**Definitions**

- **Completions**
  - Low Complexity
    - Less than 50% points
    - Director or Delegate
  - Moderate Complexity
    - Between 51 and 75% points
    - Template - PR, PCR, DOD, TOC, PC, Other (Optional)
    - CIO or Delegate
  - Complex
    - High visibility, AC directed, multiple organizations affected
    - Greater than 75% points
    - Template - After tech projects, otherwise TAD, TOC, RFP/Task
    - CIO or Delegate

- Assumes internal planning; additional templates are optional.
**Type/Scale Ranking of Current IT Programs and Projects** *(Illustrative Example)*

In general, a small number of projects consume a majority of the IT project resources (80/20 rule). Therefore, these require more planning & control.

<table>
<thead>
<tr>
<th>Programs and Projects</th>
<th>#</th>
<th>% of IT Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>6</td>

</table>

*Source: Major Organization. Tasks are not included.*

Fast Track versus Complex (Full Risk Mitigation) PM  

**PM/SDLC Phases, Processes and Templates Should Accommodate Multiple Program/Project Types (e.g. Simple, Moderate & Complex) and Therefore, Be Scalable**

The following chart illustrates the relationship between PM & various life cycle scenarios that should be accommodated by the PM processes, templates, documentation and tools:

**PROJECT MANAGEMENT**

FAST TRACK*  
Small or Quick Projects

FULL RISK MITIGATION (complex program or project)

SDLC/IDLC/PDLC (must accommodate multiple methodologies such as:  
Waterfall, Spiral [Iterative], Hybrid, RAD, DSDM Development Processes)

PURCHASED*  
BUILT*

MINIMUM PM TEMPLATES (ILLUSTRATION ONLY)
- PROJECT (SERVICE) REQUEST  
- USER REQUIREMENT/OBJECTIVES/SCOPE  
- PROJECT PLAN/BUDGET/MILESTONES/DELIVERABLES  
- STATUS REPORTING, METRICS AND GOVERNANCE

Note: Will vary by organization:  
*Can include new development or technology, enhancements & maintenance or change in scope  
** Small Project = < 3 months (duration); < 4 FTE; < $250k; etc.  
Large Project = > 3 months; >4 FTE; > $250k; strategic, etc.

Refer to Type/Scale Matrix for Suggested Templates and Approvals
PM Lifecycle Phases and Related Templates

**Description of PM Lifecycle Templates**

<table>
<thead>
<tr>
<th>Phase(s)</th>
<th>Template(s)</th>
<th>Purpose/Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initiation</td>
<td>0. Program/Project Request (PR)</td>
<td>Obtains customer or other constituent authorization to request IT services</td>
</tr>
<tr>
<td></td>
<td>1. Program/Project Initiation Report (PIR)</td>
<td>Provides sufficient high-level information on a program or project to either approve or reject the request (e.g. scope, requirements, etc.)</td>
</tr>
<tr>
<td></td>
<td>2. Business Project Definition (BPD)</td>
<td>Describes the major business objectives that the system, component or deliverable will satisfy and/or impact</td>
</tr>
<tr>
<td></td>
<td>3. RFI, RFQ, RFP Checklists</td>
<td>Identifies the contents of a solicitation to vendors in the form of: Request for Information, Request for Quote and/or Request for Proposal</td>
</tr>
<tr>
<td></td>
<td>4. Technical/Functional Architecture Definition (TAD)</td>
<td>Describes the complete system and/or component from a functional, technical and operational aspect</td>
</tr>
<tr>
<td>Planning</td>
<td></td>

<tr>
<td></td>
<td>6. Deployment, Training and Documentation (DTD)</td>
<td>Describes the actual installation and cutover of the system or components and identifies the training and documentation requirements</td>
</tr>
<tr>
<td><strong>Closure</strong></td>
<td>7. Program/Project Delivery/Closure Report (PCR)</td>
<td>Verifies and evaluates that the program/project objectives, costs, benefits and deliverables have been satisfactorily implemented and documents lessons learned</td>
</tr>
</tbody>
</table>

### Program/Project Management

#### Program/Project Governance, Change and Escalation Hierarchy (Illustrative Example)

A formal program/project review process should be established and followed with clearly defined roles and responsibilities

- **Exec. Sponsor**
  - Monthly/Quarterly
  - Last possible option
  - Approves major initiatives
  - Resolves critical issues
  - Approves major changes
  - Prioritizes resource allocations
  - Manages performance/corrective actions

- **Executive Steering Committee**
  - Semi-Monthly/Monthly
  - Resolves issues escalated from PM and/or core team
  - Supports PM
  - Cross project impacts and priorities
  - Change Control Board
  - Manages performance/corrective actions

- **VP/Director**
  - Weekly/80 hours
  - Communicates status and actions
  - Escalates issues and conflicts not resolvable: supports PM
  - Assigns and monitors resources
  - Manages performance/corrective actions

- **Project Managers**
  - Daily/Weekly
  - Do work per project baseline
  - Do work per authorized change form

- **Project Team**
  - Supports PM
  - Cross project impacts and priorities
  - Change Control Board
  - Manages performance/corrective actions
Program/Project Management

Program/Project Key Performance Indicators (KPIs) (Illustrative Examples)

**KPIs** - Communicate the health of a program or project, a task, phase and/or deliverable and should be determined by each organization in terms of mandatory and discretionary

**Purpose** - Measures progress against a baseline and may trigger corrective actions

**Characteristics of KPIs** – Quantifiable, trackable, measurable, comparable and actionable

**Mandatory**
- Time - Schedule and suspense (due date)
- Costs - Actual versus budgeted $ (Cost)
- Status of critical path - are we on target based on date
- Deliverable hit ratio - # planned versus # completed deliverables (Schedule)
- Top issues - # of open issues should be a minimum
- Top risks of the project (should always be in focus) –with contingency plans
- Customer Satisfaction - quarterly

**Discretionary**
- Milestone hit ratio - # planned versus # actual
- Actual versus budgeted resources (# of people)
- Number of program/project changes and variances
- % of Rework
- Cost performance index (CPI)
- Schedule performance index (SPI)
- Earned Value – requires a time reporting system in place

Program/Project Management Office – Roles and Areas of Focus (Illustrative Example)

Growing trend to establish PMOs at CEO/COO level to track Enterprise Wide Initiatives

PMO can be located at CIO level or distributed level or both

**Roles**
- Focal point for project planning, control and coordination processes
- Coordinate, control and report time, costs, resources and performance reporting
- Establish/Maintain/Administer all project processes, tools, templates & software
- Center of Excellence – Subject Matter Experts (for staff augmentation or to manage troubled projects
- Help Desk/Web Site

PMO
Sample PM Organization Structure - Major Multinational Corporation
(Illustrative Example) - PM organizations work closely together and support the geographic regions and business units in those regions

Federal Government Organization

Case Studies – IT Governance

Environment & Drivers
• Federal government is focusing on reducing costs and becoming more efficient through automation performance management
• This agency provides IT systems and infrastructure support for several other agencies
• Key areas of focus on government professionals and executives are greater accountability and improving their IT organizational and individual skills, competencies and maturity levels

Issues and/or Opportunities
• Improve CMMI level of maturity from the low end of Level 1 to Level 3 within a three year period, initially in the PM area and then in other IT governance areas
• Due to significant outsourcing, government employees had to be trained in more formal PM
• Ad hoc and inconsistent PM and operational policies and processes throughout IT organization

Approach
• Completed assessment of one function within the IT organization and identified gaps and a plan to fill gaps
• Sponsored by CIO
• Three levels of steering were established:
  - Business/IT Steering Committee – senior managers who focused on prioritizing initiatives and funding
  - IT Technology Steering Committee – concerned with architecture, interoperability standards and compatibility issues
  - IT PMO – established to develop consistent and scalable PM policies and processes

Approach (Cont’d)
• Formed an IT Governance Tiger Team, with representation of all IT departments and facilities by an external consultant to develop, review and deploy the IT governance framework and phased plan (see next slide) with the following priorities:
  - Program/Project Management and PMO
  - IT work Flows, Decision Rules and Authority Levels
  - IT Operations and Infrastructure
  - Performance Management & Management Controls
### Case Studies – IT Governance

#### Results – Alignment
- Business/IT Steering Group focuses on alignment and major investment priorities
- Capital budgeting is part of but precedes the IT Strategic Plan
- IT Annual Operating plan represents the budget authority and authorized spend levels

#### Results - IT Service Management & Delivery
- Implementing the ITIL processes in the IT Operations and Infrastructure area
- Improved the compliance reporting and documentation process and facilitated adherence to government regulations

#### Results - Program/Project Management
- All agency government employees had to attend mandatory PM training
- A consistent, but scalable Pm policy and process was deployed and resulted in significant reduction in rework and improved productivity through flexible discipline

#### Results - Performance Management
- Project Management metrics for critical projects were more tightly controlled than for smaller projects
- IT Operations and Infrastructure used daily, weekly. Monthly and quarterly metrics to measure customer satisfaction and service level performance, which is improving consistently

### Critical Success Factors
- CIO must sponsor and support
- All functions must be represented in the initiative to develop trust, better communications and more effective alignment

### Lessons Learned
- It always takes longer to implement process changes that anticipated
- Must constantly market the value proposition of IT governance and process disciplines
- Celebrate and communicate wins
Summary

- The CEO (e.g. CIO; CFO; CMO; COO; etc.) is committed to sponsoring and sustaining PM as a core competency and discipline
- Align programs and projects with business strategy using portfolio management criteria
- Get right people involved
- Deliver short term incremental deliverables that work (decompose complex programs or projects) to establish credibility and visibility
- Recognize and reward exceptional team performance
- Over communicating is good
- A formal PM governance process with meaningful metrics and actions is necessary
- Professionalize PM, reward Certification and celebrate successes
- Implement a scalable & flexible PM process & tools

Leverage and adopt industry standards/guidelines to guide your direction
- CMMI, PMMM, PMBOK, PRINCE2, etc.
5.0 IT Service Management (ITSM) & ITIL (IT Infrastructure Library) Excellence

IT Service Management is about maximizing the ability of IT to provide services that are cost effective and meet or exceed the needs and expectations of the business to:

- Reduce the costs of operations
- Improve service quality
- Improve customer satisfaction
- Improve compliance

Objectives

- Review the principles and practices for achieving and sustaining IT service management and delivery (ITSM) excellence
- Describe an IT service management and delivery maturity model and roadmap
- Review the IT Infrastructure Library (ITIL), both v2 and v3 (2007), the benefits, processes and functions
- Illustrate select ITSM key performance indicators
- Define how to deploy an ITIL framework in an organization
Principles for Achieving IT Service Management and Delivery Excellence

- All steady-state operations (e.g. PBX, Data Center, Help Desk, Network Management, etc.) must have a primary owner and secondary (backup) owner.
- The overall ITSMD budget should be divided into a set of defined products and services so that all IT costs can be mapped to supportable business processes.
- All the IT services should achieve the desired level of efficiency, productivity, reliability and availability as measured by the appropriate key performance indicators (e.g. Service level agreements, customer satisfaction, costs, etc.).
- All ITSMD services should be charged back to the user or customer organization.
- A formal ITSMD governance, reporting and escalation process is established to resolve key operational issues, risks, and conduct periodic reviews. All steady-state operations have business continuity, backup (including one or more off-site locations), disaster recovery and security policies and procedures.
- All ITSMD related processes should be documented in a consistent, repeatable and standard framework such as ITIL (IT Infrastructure Library) and continuously improved.
- Optimizing the utilization of IT assets and resources is critical.

Top Concerns of CIOs*

1. Aligning IT strategy with business strategy & Governance
2. Meeting business and user needs
3. **Infrastructure & service management**
4. Coping with accelerating change
5. Dealing with senior management
6. Managing costs, budgets and resources
7. Keeping up with technology
8. Recruiting and retaining staff
9. Executing Projects Effectively (Time and resource management)
10. Maintaining skills and knowledge

Benefits of IT Service Management & Delivery

Well executed IT Service Management is about optimizing the ability of IT to provide services that are cost-effective and meet the needs of the business.

- Streamline service delivery and support processes
- Develop repeatable procedures
- Reduce number of service incidents and outages
- Implement standards to do things right the first time and reduce defects and rework
- Perform proactive analysis, prevention and resolution
- Plan for and ensure future capacity
- Define clear services and service targets
- Accurately allocate and recover costs
- Audit, manage and improve IT processes
- Improve IT/Business alignment

Reduce Total Cost of Operations

Improve Service Quality

Improve User Satisfaction & Business/IT Alignment

Improve Compliance

Source: BearingPoint and Computer Associates, Webcast on ITIL, 2005

What is ITIL and Why is ITIL Different?

- The ITIL framework provides an effective foundation for higher quality IT Service Management
- ITIL consists of repeatable, documented best practice processes and functions essential for more effectively managing and improving IT service delivery and management.
- ITIL processes have recently become an ISO standard (ISO 20,000)
- Industry recognized training and certification – 3 levels: ITIL Foundation, ITIL Service Manager & ITIL Practitioner
- Standardized approach and terminology
  - Focused on IT Services that business/IT alignment and value propositions
  - Standardization of processes and key performance indicators
  - Provides the quality assurance foundation for ISO 9000
  - Industry supported software and tools
  - Supports Sarbanes-Oxley
- There are 12 process components of ITIL segmented into two major areas:
  - Service Delivery
  - Service Support
ISO/IEC 20000 - IT Service Management

• The formal certification scheme for organizations wishing to demonstrate their conformance to the requirements of ISO/IEC 20000 is currently owned and administered by ITSMF.

• ISO/IEC 20000 applies to IT service management users and providers. The standard comprises two parts:
  
  - Part 1 – Specification: This is the documented requirements that an organization must comply with to achieve formal certification against ISO/IEC 20000.
  - Part 2 – Code of Practice: Expansion and explanation of the requirements in Part 1.

• Both parts share a common structure which includes the following sections: scope, terms and definitions, requirements for a management system, planning and implementing service management, planning and implementing new or changed services, service delivery processes, relationship processes, resolution processes, control processes and release processes.

• ISO/IEC 20000 is synergistic with ITIL. The standard addresses the questions relating to IT service management as the “Why and What?” ITIL, complements the standard by addressing the question of “How?” and providing the process definitions and other details.

ITIL Certifications – v2

• EXIN  http://www.exin-exams.com
  European Examination Institute for Information Science
• ISEB  http://www.bcs.org.uk/iseb/ism2.htm
  The Information Systems Examination Board

• Testing at Prometric (www.prometric.com)
The IT Service Management Lifecycle (ITIL v3)

OGC contracted the management of ITIL rights, the certification of ITIL exams and accreditation to APMG. APMG defines the certification and accreditation for the ITIL exams and published the new ITIL Version 3 (v3) certification system.

ITIL v3 has been documented as five books. Each book focuses on one of the five phases of the new v3 IT Service Lifecycle.

Source: APMG

ITIL Version 3 Service Lifecycle, Related Processes and Select Activities*

</tbody>
</table>

* NOTE: All processes in System Design, Service Transition and Service Operations are the same for v2 and v3, except where it is noted as new for v3.
** Service Asset and Configuration Management, Release and Deployment Management have been transitioned and enhanced from v2 to v3 with additional processes.
The ITIL version 3 certification framework has been significantly revised to reflect the service lifecycle approach. The new scheme recognizes the value of existing v2 qualifications and introduces a system that enables an individual to gain credits for both ITIL v2 and v3 courses. The ITIL v3 certification will be based on the following structure which will culminate in the award of the ITIL diploma in IT service management.

**ITIL Version 3 – Qualification and Certifications**

The ITIL Value Proposition – Select Company Examples*

- **Proctor & Gamble** – Started using ITIL about three years ago and realized a 6 to 8% reduction in IT total cost of operations (TCO).
- **Ontario Justice Enterprise** – Embraced ITIL 2.5 years ago and created a virtual help desk that cut support costs by 40%.
- **Caterpillar** – Embarked on an ITIL initiative 18 months ago. After applying ITIL principles, the rate of reaching the target response time for incident management on Web-related services jumped from 60% to more than 90%.
- **Large Global Manufacturing Company** – Due to long problem resolution times and costs and extended service outages, this organization established an ITSMD initiative with an owner with the power to enforce. The result was a savings of $30 Million over a 3 year period.
- **Petro Canada** – Petro-Canada outsourced its IT infrastructure to multiple outsourcing vendors using ITIL process definitions and terminology. Vendors were required to perform the work on-site and integrate into the in-house process flows (ITIL based). Petro-Canada was better able to manage inter-vendor relationships, cooperation and measurement of service levels and other key performance indicators.
- **Major Global Consumer Goods Company** – Conducted an external assessment of ITSMD maturity and decided to deploy ITIL on a global basis to clarify roles and accountability, standardize the use of processes and tools and improve compliance.

Advantages of ITIL to Customer and User

- Provision of IT Services becomes more customer-focused and agreements about service quality and SLA’s improve the relationship
- The services are described better, in customer language, and in more appropriate detail (as in a IT Service Catalogue)
- The quality and cost of the services are managed better and more effectively
- Communication with the IT organization is improved by agreeing to limited points of contact

Advantages of ITIL to the IT Organization

- IT organization develops a clearer structure, improves accountability and documentation
- Change management is justified, formalized, authorized and traceable
- Facilitates decisions to outsource select services
- Encourages the a cultural change and migration towards a more effective and more mature organization
- Facilitates SOX compliance

Potential Issues with ITIL

- Introduction of ITIL is lengthy and represents a significant effort – requires prioritization and agreement on key processes for implementation
- Improvement in the provision of services and cost reductions are insufficiently visible and poorly communicated
- A successful implementation requires the involvement and commitment of personnel at all levels in the organization
- Requires investment in ITIL support tools and technologies
The ITIL Framework - Illustrates the IT service delivery and support role in relationship to supporting the business, technology, infrastructure and application environments

Source: OGC - UK

ITIL Service Management Processes & Functions – v2

IT Service Delivery Processes - focus on management control to improve the quality, stability and IT cost structure.

IT Service Support Processes – focus on operational aspects to detect and correct problems, and ensure appropriate change, configuration and release management authorization and documentation.
**Key Implication:**

The ITIL based Service Desk becomes the primary source of communication to the end users for service, operational and infrastructure related issues.

---

**Definition:** Acts as the single point of contact for the management of incidents and problem resolution and restoration coordination to normal operational services with minimal business impact on the Customer (inside or outside) within agreed or contracted service levels and business priorities.

**Key Benefits:**

- Provides a single point of contact for customer service requests
- Focuses on service support and reporting of incidents
- Provides a single point to manage and coordinate incident and problem resolution, coordination and communications
- Maintains a log and record of reported incidents, problems and their resolution in a database
- Can produce cost reduction through efficient use of resources
- Promotes customer retention and satisfaction

---

**Goal:**

To act as a single point of contact to users of IT services and to improve customer satisfaction with the efficiency and effectiveness of the service desk.

**The major Service Desk functions are:**

- Provide a single point of contact (SPOC)
- Communicate the level of service that will be provided, and when (set expectations)
  - Based on Service Level Agreements (e.g. mean time to resolution)
- Inform the user of the assigned priority of requests
- Build confidence that requests will not be lost or ignored
**Definition:** Defines process for logging, recording and resolving incidents. Restores normal service operation as quickly as possible and minimizes the adverse impact on business operations, thus ensuring that the best possible levels of service quality and availability are maintained.

**Key Benefits:**
- Ensures that incidents are detected and that their impact on the business is known
- Ensures the best use of resources to support the business during service failures or disruptions
- Works to minimize the time to restore service and the negative effect on business operations

**Key Implication:**
Incident Management is about doing whatever is necessary to restore service to users when a disruption occurs in order to minimize business impact.

**Select KPIs:** Total Number of Incidents; Mean Elapsed Time to Resolution; Average Cost Per Incident; Percent of Closed Incidents

---

**Goal:**
To restore normal services as quickly as possible and minimize the adverse impact on business operations.

The Helpdesk or Service Desk, as an organizational unit, is only a part of the Incident Management process.
**Problem Management Summary**

**Definition:** A problem is either an unknown underlying cause of one or more incidents or a known error and for which a work-around has been identified. Problem management supports incident management by providing work-arounds and quick fixes, but does not have the responsibility for resolving the incidents.

**Key Benefits:**
- Places primary focus on root cause analysis and error prevention; not just on service restoration
- Ensures better utilization of technical subject matter experts by enabling them to avoid routine event handling and resolution activities
- Supports Fault Management and Service Desk via population of knowledgebase and development of fault/incident work-around procedures

**Key Implication:**
Problem Management should be proactive and focused on prevention, rather than firefighting.

**Select KPIs:** Problem/error control reporting; Amount of Time/Cost Spent to Fix; Percent of Recurring Problems

**Goal:**
To minimize the impact of incidents on the business that are caused by errors within the IT Infrastructure or operations and to prevent reoccurrence of incidents related to those errors.
**Key Benefits:**
- Identifies and records the information required to manage IT services
- Ensures that a central repository of configuration information is up to date, and accurately reflects the actual infrastructure
- Documents relationships of IT components to IT Services
- Improves the economic and effective delivery of IT Services

**Key Implication:**
Most IT organizations do not have a good understanding of how their infrastructure devices/components are interrelated or how they support key business processes and functions.

**Select KPIs:** Incidents/problems traced back to improperly made changes; cycle time to approve and implement changes; unauthorized IT components

**Configuration Management Summary**

**Goal:**
To account for all of the IT assets and configurations within the organization; provide accurate information on configurations and their documentation to support all the other Service Management processes; verify the configuration records against the infrastructure and correct any exceptions.

- **All CIs are registered in the CMDB.** All CIs have a unique identification code. Registration and giving a unique identification code to the CI belong to CMDB Management.
- **Register the CI**
- **Status Control**
  - The status of a CI can be in repair, in test, in production, etc. Status control means that the status of CIs must be kept up to date.
- **Verification of the CMDB**
  - At regular intervals, verification must take place, i.e. the registered data within the CMDB must be verified with the actual data.
- **Reporting**
  - The Configuration Management process must provide information about the IT infrastructure to other processes and IT management.

**Definition:** Accounts for all of the IT assets (infrastructure) and configuration items (CIs) within the organization and its services by maintaining, documenting and verifying the configurations and their versions. It provides a sound basis for enabling Incident Management, Problem Management, Change Management and Release Management to be managed effectively.
**Change Management Summary**

**Definition:** The process of controlling changes to improve infrastructure and service with minimum disruption. Ensures that a consistent and repeatable process with the appropriate decision criteria are used to review, fund, prioritize, document and authorize all changes in order to minimize the impact of change related incidences on service quality and consequently improve the operational and infrastructure aspects in support of the business.

**Key Benefits:**
- Provides governance as to how IT changes are requested, funded, prioritized assessed, authorized, documented and implemented
- Minimizes the number of unauthorized changes and allows for introduction of change based on business needs
- Minimizes risk and disruption caused by failed changes via performance of impact assessments, development of back-out plans, etc.

**Key Implication:**
An effective Change Management process is critical for minimizing IT service disruptions and service level violations caused by unauthorized, uncoordinated changes to the IT production environment. Scope includes hardware, network, systems software and “live” application software.

Select KPIs: # of Requested Changes; # of Successful Changes; # of Pending Changes; Time or Cost of Changes per Change Type

---

**Goal:**
To control and manage changes in the IT infrastructure and operations environment with the smallest possible risk to the agreed service levels.

If the implementation fails, the change must be evaluated again.

All implemented changes must be reviewed. The purpose of the reviews is to establish that:
- The change has had the desired effect and met its objectives.
- There have been no unexpected or undesirable side-effects.
- The resources used to implement the change were as planned.
Release Management Summary

**Definition:** Ensure that all technical and non-technical aspects of an authorized release (e.g. hardware, software, network, application rollouts) and rollouts are managed in a coordinated manner with the appropriate checklists and signoffs between the appropriate constituents (e.g. development, architecture, operations, maintenance, vendors, etc.). Release types include: major, minor and emergency fixes.

**Key Benefits:**
- Provides a consistent, customer focused approach to deploying large releases into production
- Bundles similar changes together to decrease impact on the business and the workload on IT
- Better control on installed hardware and software leading to reduced costs in licensing and maintenance

**Key Implication:**
Release Management works to bridge the gap between development and operations by ensuring that new/updated services are not just “thrown over the fence” and formalizes the transfer process from development to production.

**Select KPIs:** # of major, minor and emergency releases; Problems attributed to releases; new, changed or deleted objects

---

Release Management Summary

**Goal:**
To design and implement efficient procedures for the distribution and installation of changes to IT systems; plan and oversee the successful rollout of software, hardware and/or network components; and ensure that hardware and software being changed is traceable, secure and that only correct, authorized and tested versions are installed.

**Release Management Activities and Lifecycle**

<table>
<thead>
<tr>
<th>Development/ Acquisition Env.</th>
<th>Controlled Test Environment</th>
<th>Live Environment</th>
</tr>
</thead>
</table>
Service Level Management Summary

**Definition:** Improves and maintains IT Service quality and performance through a continuous cycle of monitoring and reporting on IT Service key performance indicators and results. Institutes corrective actions to eliminate poor service and support business continuity and operating improvements.

**Key Benefits:**
- Ensures customer requirements are known and that services are designed to meet these requirements
- Sets forth defined service targets that all IT groups can work towards
- Places a focus on service monitoring and improvement to identify and resolve issues
- Ensures that IT is focused on the most important areas

**Key Implication:**
Service Level Management should manage through a defined Service Level Agreement or contract that describes what services and corresponding SLAs are available to IT customers, with corresponding rewards and penalties if they are met or missed respectively. Service catalogues list all services and summarize each service and its key attributes.

**Select KPIs:** SLAs; customer satisfaction surveys

---

**Goal:**
To maintain and improve IT service quality, through a constant cycle of agreeing, monitoring and reporting upon IT service achievements and instigation of actions to eradicate poor service - in line with business or cost justification.
**Definition:** Ensures that all of the current and future infrastructure (the means of Service Delivery) and operational (current Service Delivery) capacity (e.g. Storage, Bandwidth, hardware, etc.) aspects to satisfy the business requirements, is scalable, backed-up and provided in a cost effective manner.

**Key Benefits:**

- Ensures that the existing infrastructure is optimized in terms of capacity when compared to the agreed service targets
- Understands the way in which the infrastructure is currently being used and will be used in the future
- Works to ensure that future capacity exists to meet business requirements and that it is provided in a cost effective basis.

**Key Implication:**
Capacity Management is concerned with both optimizing the current environment and planning for future business requirements.

**Select KPIs:** Capacity, Volume and Speed Metrics

---

**Goal:**
To ensure that cost justifiable IT capacity always exists which is matched to the needs of the supported business.
**Definition:** Optimize the capability of the IT Infrastructure, services and supporting organization to deliver a cost effective and sustained level of availability that enables the business to achieve its business objectives.

**Key Benefits:**
- Services can be designed to meet target service levels instead of defining the target and then hoping it is possible
- Provides a formal way to measure availability of IT services from a user perspective
- Over time, can reduce the number and impact of incidents by increasing resilience and reliability

**Key Implication:**
It is a proactive process that strives to ensure that availability targets are reasonable and achievable and that IT services are designed with this number in mind.

**Select KPIs:** Rate of availability; Overall uptime and downtime; Number of faults; Mean time to repair

**Availability Management Summary**

**Goal:**
To guarantee the availability of IT services, agreed upon by clients, by adequate deployment of resources, processes and techniques.

**Availability deals with the planning, management, improvement and monitoring of availability of services for the realization of the SLAs**

**A service is available when the service has been provided within an agreed:**
- Number of direct users
- Maximum response time
- Functionality
**IT Service Continuity Management (ITSCM) Summary**

**Definition:** Support the overall Business Continuity Management process by ensuring that the required IT technical and service facilities (e.g. computer systems, networks, applications, technical support and Service Desk) can be recovered within the required and approved timeframes. This also requires the development and maintenance of a backup, contingency and disaster recovery plan and facilities.

**Key Benefits:**
- Decrease the cost and impact to the business when a crisis occurs
- Improves the relationship between IT and the business
- Potentially lower insurance premiums
- Ability to adhere to regulatory requirements
- Competitive advantage when securing business partners

**Key Implication:**
The IT Service Continuity Plan is a part of the overall Business Continuity Plan and is focused on the continuity of business critical IT services. ITSCM is focused on technical and operational aspects and interacts with other ITIL processes (e.g. Service Level, Availability, Configuration, Capacity and Change Management).

**Select KPIs:** Lower insurance premiums; Impact and costs of major disruptions and discontinuity

---

**IT Service Continuity Management Summary**

**Goal:**
To support the overall Business Continuity Management process by ensuring that the required IT technical and services facilities (including computer systems, networks, applications, telecommunications, technical support and service desk) can be recovered within required, and agreed, business schedules.

---

**Risk analysis**

- Assets
- Vulnerabilities

**Risk management**

- Threats
- Risks
- Counter Measures
- Damage Reduction/Avoidance

**Continuity plan**
**Definition:** Provide cost-effective oversight of the IT assets and resources used in providing IT Services, including budgeting, accounting and charging of services.

**Key Benefits:**
- Provides accurate cost information to support IT investments
- Provides a budget of expected IT costs
- Collects and defines the true cost of providing IT services and allows for accurate accounting of these cost by IT customers
- Allows for recovery of costs via charge-back of IT services to customers and helps in focusing on IT/client priorities

**Key Implication:**
IT organizations are being driven to operate as an Internal Service Provider. This demands that they have mature financial management capabilities and can accurately convey and recover costs for IT services.

**Select KPIs:** Cost tracking; Budgeting; Charge backs; Asset value and retirement

---

**Financial Management Summary**

**Goal:**
To provide cost-effective stewardship of the IT assets and resources used in providing IT services.
**IT Security Management Summary**

**Definition:** Ensure a high (whatever is necessary) level of security so that the IT infrastructure and services, as well as the business functions they support, are not compromised. ISO 17,799 provides a standard framework for IT security

**Key Benefits:**
- Provides secure policies and procedures to protect infrastructure components
- Creates awareness to protect and secure IT resources throughout the organization

**Key Implication:**
IT organizations are being driven to become more secure and protect the information, infrastructure and people resources working in their environments.

**Select KPIs:** Number of security breaches; Impact/cost of security violations

---

**Summary of New or Modified ITIL Service Management Processes/Functions –v3**

**Service Catalogue Management** (part of the Service Design Phase)

**Definition:** The Service Catalogue Management includes a description details and the status of all existing services and business processes they support, as well as those in development. There are two components of the Service Catalogue: 1) The Business Service Catalogue contains the details delivered to the customer. It represents the customer’s view and 2) The Technical Service Catalogue expand the Business Service Catalogue with relationships to the supporting services, shared services, components and CIs (configuration items) necessary to support the provision of the service to business (it is not viewable by the customer).

**Key Benefits:**
- Simplifies the ordering of IT services from a customer’s viewpoint.
- Provides a consistent description of IT services that can simplify pricing, scheduling and service fulfillment.
- Sustains a more proactive Service Level Management process and function.

**Key Implication:**
It helps customers to interface and request well defined services from IT in a consistent and effective manner.

**Select KPIs:** Number of services included in the service catalogue; Number of repetitive services ordered by customers from the catalogue, etc.
Supplier Management (part of the Service Design Phase)

Definition: Involves the selection, contract management and on-going management of third party service providers.

Key Benefits: Provides a consistent process for dealing with service providers and outsourcing vendors

Key Implication: This is a new process within the ITIL suite. Other organizations such as the International Association of Outsourcing Professionals and Carnegie Mellon's IT Services Qualification Center already have developed life cycle phases, processes and certification programs for individuals and organizations for strategic sourcing.

Select KPIs: SLAs, etc.

Transition Planning and Support (part of Service Transition Phase)

• This process focuses on plans and coordinates the resources to move a new or changed service into production within the projected cost, quality and time estimates.

• This is not really a new process, since both Release and Change Management, incorporated sections of these activities in their scope.

• However, the renaming of the process to Transition Planning and Support brings more visibility to an area that has suffered from poor or inadequate management and coordination for a long time in IT.

• Improper transitioning to either internal operations or vendor/outsourced operations without the appropriate tests, pilots, documentation, training and acceptance processes can be disastrous.
<table>
<thead>
<tr>
<th>Process/Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Service Asset and Configuration Management</strong> <em>(SACM)</em></td>
<td>This new process assumes responsibility for maintaining all secure libraries and stores, such as the Definitive Software Library (DSL) and Definitive Hardware Store (DHS) that Release Management previously maintained.</td>
</tr>
<tr>
<td><strong>Release and Deployment Management</strong> <em>(part of Service Transition Phase)</em></td>
<td>• This process has been renamed from release management to release and deployment management in v3. It now focuses on the activities of managing releases and deployments into the operational infrastructure.</td>
</tr>
<tr>
<td></td>
<td>• It also introduces the concept of early life support (ELS), which provides additional support to the users and support teams on the release of changes.</td>
</tr>
<tr>
<td><strong>Service Validation and Testing</strong> <em>(part of Service Transition Phase)</em></td>
<td>• Service Validation and testing represents quality assurance as described in ITIL v2, but was never really addressed.</td>
</tr>
<tr>
<td></td>
<td>• The new process describes the progression of testing and quality control in terms of incremental contributions to business value.</td>
</tr>
<tr>
<td><strong>Evaluation</strong> <em>(part of Service Transition Planning)</em></td>
<td>ITIT v3 is much more specific than ITIL v2 with this process. It defines how to plan, guide and execute the evaluation process, including such assessment factors as service provider capability, organizational philosophy and management style, resources, modeling, metrics, purpose and use.</td>
</tr>
<tr>
<td><strong>Service Knowledge Management Systems (SKMS)</strong> <em>(part of Service Transition Phase)</em></td>
<td>Knowledge management is new in v3 and is important in presenting and using a wealth of knowledge stored and shared in a data base of IT service management.</td>
</tr>
<tr>
<td></td>
<td>Knowledge management addresses planning the knowledge management strategy, transferring and sharing knowledge throughout the organization, managing information and using knowledge management in a service environment. SKMS is supported by configuration management systems and CMDB(s) integrated with asset management.</td>
</tr>
<tr>
<td><strong>Event Management and Request Fulfillment</strong> <em>(includes the Service Desk from v2 and both are part of Service Operations Phase)</em></td>
<td>These two processes encompass the Service Desk from v2 and expand to include providing support for managing events and IT service requests from the initial request to the completion or resolution of the event or request.</td>
</tr>
</tbody>
</table>
Access Management (part of Service Operations Phase)

Access data is now incorporated into the CMDB at the information integration layer of the Service Knowledge Management System. This incorporates some of the security considerations from v2 and expands the security guidelines regarding access to specific information and data bases.

Monitoring and Control IT Operations (part of Service Operations Phase)

- This new process focuses on the day-to-day management of IT Services, including plans, policies, procedures, processes, metrics and status reporting.

- Overall, v3 appears to be a substantive improvement over v2, by filling significant gaps with useful and pragmatic content and much improved emphasis on services.

- It will be up to each organization to tailor a blend of both v2 and v3 into a best practice for its environment, level of maturity, pain points and other factors.

- Security Domains – There are 9 security (policy) domains which are used to develop strategy, execute plans and track progress:
  - Information Security Organization
  - Risk Assessment and Asset Classification
  - Operating and Architectural Controls
  - Personnel Security
  - Physical & Environmental
  - Access Control
  - Systems Development & Maintenance
  - Monitoring Compliance
  - Business Continuity
  - Wireless Communications
  - Security Incident Management

* Note: ISO 17799 is intended to be used with ISO/IEC 27001 & integrates the process based approach of ISO’s management systems standards, including the Plan-Do-Check-Act cycle and requirement for continual improvement.
Security Levels – There are 6 security (policy) levels which are used to develop policies, procedures and documentation - Information Security Policy Statement; Information Security Policies; General IT Standards; Minimum Security Guidelines, Security Procedures & Security Guidelines; Supporting Documents, Templates & Forms and Security Awareness (Marketing) Material and Training.

ISO/IEC 27001 IT Security Management Systems – The purpose of ISO/IEC 27001 is to help organizations establish and maintain an information security management system (ISMS). It is designed to be used for certification purposes.

While ISO/IEC 27001 lists a set of control objectives and controls, which came from ISO/IEC 17799, ISO 17799 also provides implementation guidance. ISO/IEC 27001 is aligned with ISO 17799. Many organizations use both standards to develop and improve their information security management environment, policies, processes and controls.

Steps in Making ITIL Real

- Must get commitment from the top
- Must get sufficient and available resources
- Identify Executive Champion and Multi-Disciplinary Team
- Do Homework – Educate yourself on current and emerging best practices
- Conduct a IT Service Management and Delivery maturity assessment using a leading best practice process such as CMMI to assess and define current and target-state maturity levels for each ITIL process and function
- Analyze assessment results and establish a Process Maturity Baseline and Roadmap.
- Develop and Prioritize ITIL Processes, Functions and Tools for Implementation
- Document and train
- Establish a “Web Portal” to Support Dissemination of Process Implementations.
- Continuously improve
A framework consisting of twelve repeatable, documented processes for improving **IT Service Management and Delivery** to reduce costs and improve customer satisfaction, service and compliance.

**Note - Matrix may be used to assess level of maturity of ITIL processes (Ranking: 1 = Ad Hoc; 5 = Optimized Process)**

There are many ITSM metrics, dashboards and KPIs – Below are some examples:

- Number of Disruptions of Services
- Service Desk Effectiveness
- Establish and Implement Consistent Processes and Procedures
- Effective Use of Integrated Support Tools
- Effective Communications
- Availability and Capacity SLAs
- Effective Coordination and Cooperation
- Customer Response Time (2 min)
- Customer Response Time (5 min)
- First Call Resolution Rate
- Escalation Time for First, Second and Third Response Rate
- Number of Changes
- Security Violations/ Intrusions
- Trouble Ticket Acknowledgement (1 hr)
- Workstation Functional Restoration
- Reopened Trouble Tickets
- Network and Server Availability
- Global Service Interruption
- Partial Service Interruption
- Printing Services Availability
- Printing Services Availability
- MAC (Moves, Adds and Changes)
- Completion Percentage
- End User Satisfaction
- Timeliness and Schedule Adherence
- Mean Time to Repair
- Technology Refresh
- Performance of Major Projects – Time, Cost, Scope,
- Release Controls
Most ITIL Projects Start With Service Desk & Incident Management

ITIL Tools should support the ITIL processes, controls and templates

### Global Manufacturing Organization

#### Environment & Drivers
- Annual revenue range - $45 to 55 Billion
- Number of Employees – 200,000+
- Number of IT employees – 3,500 – 5,000
- IT spend as a % of revenue – 1.1 to 2.5%
- Conservative management, very financially focused
- Brand management driven
- Decentralized on a regional (geographic) basis
- Think globally, act locally
- Technology used primarily to increase efficiency, reduce costs with limited focus on growth
- Company has primarily grown through acquisitions
- CIOs (corporate and regional) report to CFOs and are not part of the Senior Executive Management Team
- Industry is consolidating both on markets (fewer and larger customers/channels) and manufacturing

#### Issues and/or Problems
- Number of IT employees – 3,500 – 5,000
- Number of Employees – 200,000+
- Annual revenue range - $45 to 55 Billion
- Technology used primarily to increase efficiency, reduce costs with limited focus on growth
- Company has primarily grown through acquisitions
- CIOs (corporate and regional) report to CFOs and are not part of the Senior Executive Management Team
- Industry is consolidating both on markets (fewer and larger customers/channels) and manufacturing

### Case Studies – IT Governance

#### Results - Program/Project Management
- PM training for all IT folks was mandated by the Corporate CIO
- While a consistent and uniform PM policy and process was developed based on industry standards, each region is empowered to implement based on their environment and culture – some regions are more disciplined than others.
- Major project metrics monitored include schedule, cost, quality, number of open issues and customer satisfaction

#### Results – Performance Management
- Key performance indicators for IT are:
  - Costs and headcount for IT budget (pressure to constantly reduce is continuous)
  - Major projects, which represent 50-70% of the IT resources are tracked closely based on cost, schedule, resources and high risks. Minor projects are much less rigorously managed
  - IT Service Management and Delivery uses several tools to track and report a variety of dashboard & key performance indicators (e.g. SLAs, asset utilization, men time to repair incidents, etc.)

#### Results - IT Service Management & Delivery
- ITIL is being adopted as the process standard for IT operations and infrastructure.
- Six ITIL processes have been identified as priorities (e.g. change mgmt., configuration mgmt., service level mgmt., release mgmt., incident mgmt. & problem mgmt.)
- Corporate and regional Centers of Excellence have been formed to develop, adopt, train and deploy ITIL within their region.
- The initiative was launched in 2005-2006 – too early to assess results

#### Critical Success Factors
- Global CIO sponsorship of consistent global processes and term definitions for Project Management, ITIL and Security, which are deployed with regional and local flexibility
- Clearly defined roles and responsibilities for global and regional IT organizations
- Mandated education and training in these areas
- Sponsor and reward applicable industry certifications
- Use outside consultants to fill gaps and get started
Lessons Learned

- Management style in each region will determine the level and degree of IT governance enforcement.
- Conduct an assessment of IT maturity levels, based on industry best practices, for each governance area, identify gaps and develop a plan to fill gaps.
- Large, complex and highly visible programs and projects are tightly controlled, while others are controlled based on the discretion of the Project Board and project Manager for the project.
- Conduct a detailed post-mortem on completed or challenged projects and record lesson learned.

IT Service Management

Summary

- IT Service Management puts a heavy emphasis on the importance of process implementation and improvement.
- Processes should be well defined, documented, scalable, flexible and measured.
- Processes define interfaces between organizations and ensure that the work flow effectively spans organizational silos and boundaries.
- Roles and responsibilities should be well defined with respect to each ITSMD function and process.
- Each process should have an owner.
- Leverage tools to support and enable the efficient management of ITSMD processes.
6.0 Strategic Sourcing, Outsourcing & Vendor Management Excellence

It is not the strongest among the species that survive nor is it the most intelligent. It’s those that are most adaptive to change.

Charles Darwin

Objectives

- Identify build versus buy criteria and introduce the outsourcing decision-making scorecard
- Review major outsourcing trends, opportunities, issues and concerns
- Describe the vendor selection, evaluation, contract negotiations and management process
- Discuss the outsourcing governance process and key metrics
- Explain differences between domestic and off-shore outsourcing
What is Outsourcing?

- Outsourcing – act of obtaining services from an external source
- Onshore ((Home Country) Outsourcing – obtaining services from an external source in your home country
  - Rural Outsourcing – variation of home country outsourcing where an organization obtains the services of an external source in a rural area (implies that the service is less expensive)
- Near - shore Outsourcing – refers to contracting a company in a nearby country, often one that shares a border (but not always). Canada or Mexico are near – shore countries for United States based organizations
- Offshore Outsourcing – refers to contracting with a company that is geographically distant, like India, Ireland, China, Philippines, Israel and Rumania
- Best - shore Outsourcing – A recently coined term that describes which “shore” will offer better communications, lower costs and higher productivity

Remember, savings from the lower wage rate countries must exceed the increased costs and time of management and risk associated with offshore outsourcing for it to be economically viable.

The Information Technology Balancing Dilemma

How to Minimize Technology Total Cost of Operations (TCO) while Maximizing its Use to Achieve Growth, Innovation, Speed and Competitive Advantage

REDUCE/CONTAIN/AVOID COSTS

- Outsourcing
- Cost tracking/acct. systems
- Charge Backs
- Benchmarking and best practice comparison
- Management by objectives with rewards and punishments
- Six (6) Sigma quality
- Planning
- Formal Project Management
- Measurements and metrics
- Lifetime education and training
- Continuous process improvements
- IT Service Management (ITIL)

INCREASE VALUE

- Increase revenues
- New products/services
- New distribution channels
- New Markets
- e-Business
- Acquisitions and mergers
- Outstanding customer service
- Outsourcing
The Outsourcing Decision-Making Scorecard

**Company Environment:** (Yes or no response)
1. Is this a core competency?
2. Does this service need to be provided on a continual basis?
3. Do we have in-house expertise to provide this service?
4. Do we have available staff to provide this service? Is it sufficient?
5. Can we legally outsource the service? (e.g., restrictive policies or regulations; security or embargo considerations; on-going litigation)

**Objectives:** (Yes or no response)
1. Can the objectives for this service be clearly defined?
2. Are the objectives short or long term?
3. Can the results be easily and objectively measured?
4. If the objectives are not achieved, will this have a negative impact on the firm?
5. Are the objectives tactical or strategic?

**Risks:** (Yes or no response)
1. Would loss of content of this service hurt the firm?
2. Would loss of expertise have a negative impact?
3. Is quality-of-service delivery a concern?
4. Would the response time to situational problems be reduced?
5. Would current contract performance be negatively impacted?
6. Would the impact of the vendor going out of business be significant?

**Source:** Modified from Brown & Wilson, “the Black Book of Outsourcing”

**Vendor Evaluation/Governance:** (Yes or No)
1. Are there known vendors for this service?
2. Are the vendors known to have the capability and capacity to provide this service?
3. Is the vendor certified vis-à-vis an industry standard (e.g., ISO, PMI, CMMI, ITIL, etc.)?
4. Does the vendor have local and international presence and capability?
5. Has the firm had previous experience with the vendor?
6. Does the vendor have a superior reputation for delivering high quality services?
7. Will the vendor comply with the firm’s governance requirements?

Outsourcing Motivations – Build versus Buy Criteria

<table>
<thead>
<tr>
<th>BUY (OUTSOURCING) CRITERIA</th>
<th>BUILD (IN-SOURCING) CRITERIA</th>
</tr>
</thead>
<tbody>

</tbody>
</table>
Major Outsourcing Trends & Challenges

- Growing Market - $500+Billion at 15-20% per year - I.T. and Non-I.T. (Engineering, Architecture, Medical Transcription, etc.)
- Faster, but slowing Offshore Growth:
  - Major Countries – India, China, Ireland, Israel
  - Emerging Countries – Philippines, Brazil, Russia & Eastern Europe, Some African Countries
- Growing near shore – Canada and Rural Shore (USA rural states)
- Balance Scorecard of Performance Metrics:
  - Management – Financial, Quality, Delivery Schedule, Customer Satisfaction, Other
  - Operational - SLAs, Responsiveness Index, Mean Time to Repair, Up Time, Redundancy, Availability, etc.
- Penalties for Non-Performance
- Reward for Extra-Ordinary Performance
- Contingency & Backup Provisions
- Varying Models & Contract Durations

The Modular Corporation

Leading to What Some Have Called the Modular Corporation, the Estimated Value of the Outsourced Functions = $546 Billion+ in 2005.
Outsourcing is a Global Reality

Outsourcing Goes Global

India still dominates services offshoring, with three-fifths of total industry revenues, but other countries around the world are trying to horn in on the lucrative work.

<table>

Data Source: A.T. Kearney / Nexcom, BusinessWeek

* Rankings by A.T. Kearney list countries in order of attractiveness for outsourcing, based on costs, people skills, and business environment. Access and S.T. Kearney BusinessWeek, 2004

Outsourcing – Vendor Views

- Substantial Revenue Stream Potential
- Growing Global Market
- Long Term Customer Relationship
- Competitive Environment
- Bid Process Expensive
- Technically Complex
- Pricing Sensitive – Make Provisions for Change
- Cost Estimating Difficult
- Increased Pressure to be Certified in Quality, Software Development, Project Management, ITIL, Security, etc.: (e.g. ISO 9000, 17799, 20000, SEI’s CMMI, PMI’s PMP)
Outsourcing – Customer Views (& Wants)

- Quality = or > Current
- Reduced Costs & Reduced Capital Expenditures
- Availability, Reliability, Dependability, Credibility, Bench Strength, Financial Accountability and Service
- Redundancy, Contingency & Disaster Recovery (No Single Point of Failure)
- Wants Measurable Results with Realistic & Enforceable Metrics
- Wants a Governance & Escalation with Single (Limited) Point of Vendor Contact
- Wants Dependability, Credibility & Disengagement Options
- Global Contract for Volume Discounts (Think Global, Act Local)

Outsourcing – Customer Issues and Challenges

- Security of Data
- Business Continuity
- Geopolitical (Off-shore)
- Vendor Maturity
- Quality of Work
- Schedule Adherence
- Presence (Representation) in US
- Communications and Culture – Distance, Time Difference, Management time to coordinate, Language,
Outsourcing – Can Be Complicated

According to a recent Forrester Research report on Outsourcing based on a survey of organizations buying outsourcing services:

• 53% reported that they have outsourcing challenges because their companies lack project management skills (e.g. they have no experienced outsourcing governance)

• 58% reported that they lack a good process for specifying the work

• 48% said they did not have the right metrics for measuring performance

Differences Between Domestic and Off Shore deals

• Vendor cost/pricing structure

• Tax implications

• Regulatory implications

• Political concerns

• Data protection and security

• Sourcing process itself

• Management and governance process is more complex and time consuming

• Legal and arbitration adjudication

• Intellectual property protection
Five Stages of Outsourcing

The five stages of outsourcing include: idea, assessment and planning, implementation, transitions and management (ongoing).

The process of outsourcing begins with strategy, moves through assessment and implementation and then continues into the management of the relationship. The process forms a closed loop as the management of the current relationship sets the stage for what’s strategically possible in the future.

Key Business Questions

1.0 Idea Stage
- Which outsourcing opportunities are appropriate in support of the organization’s business strategy?

2.0 Assessment and Planning Stage
- With development of the business case and of the provider marketplace, are the anticipated benefits, indeed, real?

3.0 Implementation Stage
- Can we reach agreement on a deal with one of the providers?

4.0 Transition Stage
- Can we execute successfully?

5.0 Management (Operating) Stage
- With the transition complete, are we ready to operate under the new agreement? Are the benefits being realized?
### Key Deliverables and Go/No Go Decision Criteria by Outsourcing Stage

Outsourcing Business Case Outline (Illustrative Example)
Vendor Selection Process Flow

Approved Business Plan

- Research
- RFI/RFQ
- RFP Follow-up
- Selection/Evaluation
- Scorecard
- Due Diligence
- Contract Negotiation/Award
- Rollout
- Ongoing Support

- Internal/external research; requirements definition
- Evaluation criteria
  - RFI/RFP focused on services, infrastructure, technology skills, processes, HR policies, governance and metrics
    - Vendor presentations; reference checks; due diligence
  - Debrief sessions;
  - Weighted scorecard
    - Contract strategy, type & negotiations
    - Transition planning
      - Governance and metrics
      - Operating model/roles
      - Disengagement Considerations
        - Relationship Model

Provide formal request for information, quotation and proposals from customer to service provider.

Request for Information (RFI)
The RFI is used to collect information (business, financial, product, service, other etc.) about companies.

Desired Information:

- Company Profile
- Products and Services – Current and Future Research and Development
  - Focus and Funding
- Financial Stability (Growing or Shrinking)
- Plans and Direction
- Customer Base and References
- Key Players in Organization
- Number of Locations and Strategic Alliances
- Service, Support and Training Facilities and Resources
- Pre-Installation and Post-Installation
- Support, Maintenance and Service
+++
Provide formal request for information, quotation and proposals from customer to service provider.

**Request for Quote (RFQ)**
The RFQ is primarily used to solicit pricing and/or cost information from vendors.

**Desired Information:**

- Requirements and Deliverables (from RFP or high level prior to RFP)
- Contract Type, Terms and Special Conditions
- Pricing and Discounts
- Change Criteria and Their Impact on Pricing
- Payment Terms

---

RFPs provide formal request for information, quotation and proposals from customer to service provider.

**Request for Proposal (RFP)**
The RFP is used to define the buyer’s requirements, scope, objectives and deliverables in order for the vendor to provide a proposal to supply the product or service for evaluation by the buyer.

**Desired Information:**

- Background
- Objectives and Scope
- General/Detailed Requirements
- Functions, Features and Performance Criteria
- Standards and regulatory compliance
- Constraints – Time, Business, Technical, Other
- Governance, Reporting and Dispute Escalation
- Customer/Vendor Contacts
- Backup, Recovery and Contingency Plans
- Vendor’s quality assurance and risk mitigation plans
- Detailed schedule of deliverables
- Insurance
- Contract Information and type
- Contract Clauses – Discretionary or Mandatory clauses
- Recourse, Remedies and Warranty
- Pricing
- Change Management
- Acceptance Criteria
- Disengagement Conditions and Responsibilities

---
### Scoring, Weighing and Evaluating Potential Vendors (Illustrative Example)

#### Demonstrated Competencies – 15%
- People (Recruitment, Training, Experience)
- Processes (Benchmarking, Certification, Continuous Improvement)
- Technologies (Level of Investment, Leading Edge)
- Experience (Functional, Industry, Application)
- Proven Performance & Certifications
- Track Record of Innovation

#### Competitiveness of Solution – 50%
- Solution itself (Fit to Requirements, Innovative)
- Service Delivery (Quality of Processes, Tools, Resources, Performance, Management Depth and Capabilities)
- Risks and Risk Sharing
- Terms and Conditions (Arbitration, Disputes, Adjudication, Jurisdiction)
- Human Resources (Employee Transition, Career Opportunities, Lay Offs, Outplacement)

#### Vendor Capabilities – 15%
- Financial Strength and Stability
- Infrastructure and Resources (Bench Strength, Weaknesses/Points of Failure)
- Management Systems
- Complete Suite of Services (Type and Scope, Ability to Scale, Backup, Redundancy, Security, IP protection, etc.)
- Scalability

#### Relationship Dynamics – 20%
- Culture
- Mission and Strategy
- Relationship Management (Flexibility, Partnership, Trust, Executive Presence, Governance and Reporting)
- Relative Importance (Size, as a Client)
- Achievement (esp. existing relationship)

---

### Outsourcing

### Key Outsourcing Contract Negotiation Pointers – Validate in Writing

- **Scope, Requirements, Deliverables, Roles/Responsibilities & Schedule**
- **Financial and legal arrangements** – payments, discounts, rewards and penalties, pricing formulas & changes; insurance, taxes, foreign exchange, indemnities, liability limitations & consequential damages
- **Acceptance criteria** - quantitative and qualitative criteria
- **Metrics & Service Criteria** - Volume, capacity, speed, performance, quality, documentation, training, mean time to repair, schedule, budget, program/project, etc.
- **Governance, Disputes, recourse, remedies, escalation & issues resolution**
- **Support services** - training, documentation, maintenance, service
- **Updates, new releases, upgrades**
- **Performance Warrantees & Service levels** – OLAs, SLAs (ranges with incentives, penalties)
- **Status reporting periods, formats & contents** - What? When? To whom? How often?
- **Theory of “NO SURPRISES”**
- **Disengagement options** - conditions, responsibilities, transition plan
Key Outsourcing Contract Negotiation Pointers (Cont’d)

- Responsibilities of both parties
- Ownership of Hardware, Software, Network, Data Contents, etc.
- Change management triggers, process and approvals
- Confidentiality, non-disclosure and security (physical, logical)
- Intellectual property and content protection
- Termination triggers, disengagement process and provisions
- Contingency, Back-up & Disaster Recovery Plans and Resources
- Single Point of Contact

Do’s and Don’ts of Strategic Sourcing

<table>
<thead>
<tr>
<th>Do:</th>
<th>Don’t:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Establish a Vendor Selection and Team</td>
<td>Rely solely on one vendor (Don’t put all of your eggs in one basket)</td>
</tr>
<tr>
<td>Appoint a Sr. Manager to Manage the Span</td>
<td>De-skill (keep some experts on your payroll and don’t rely solely on the vendor’s expertise)</td>
</tr>
<tr>
<td>– both long term and operationally</td>
<td>Ignore requirement to establish quantitative metrics for performance &amp; accountability</td>
</tr>
<tr>
<td>Establish meaningful KPI’s and</td>
<td>Fail to establish a formal and clear escalation process and authority</td>
</tr>
<tr>
<td>continuously monitor performance and</td>
<td>Forget to monitor vendor’s reputation, profitability and industry certification strategy</td>
</tr>
<tr>
<td>customer satisfaction</td>
<td></td>
</tr>
<tr>
<td>Continually renegotiate contracts</td>
<td></td>
</tr>
<tr>
<td>Keep business units accountable and</td>
<td></td>
</tr>
<tr>
<td>involved</td>
<td></td>
</tr>
<tr>
<td>Have a contingency and back-up plan</td>
<td></td>
</tr>
<tr>
<td>(based on risk assessment)</td>
<td></td>
</tr>
<tr>
<td>Develop a long term relationship</td>
<td></td>
</tr>
</tbody>
</table>
A formal outsourcing governance and review process should be established and followed with clearly defined roles, responsibilities and actions.

Outsourcing Governance and Escalation Roles – Customer and Vendor (Illustrative Example)

- Last possible option
- Approves major initiatives
- Resolves critical issues
- Approves major changes
- Prioritizes resource allocations
- Manages performance/corrective actions

- Resolves issues escalated from OPM
- Supports OPM
- Cross project impacts and priorities
- Change Control Board
- Manages performance/corrective actions

- Communicates status and actions
- Escalates issues and conflicts not resolvable
- Manages performance/corrective actions

- Do work per contract
- Do work per authorized change form

Summary of Steps in Vendor/Outsourcing Selection, Negotiations and Management

- Develop a Plan and Build a Business Case
  - Baseline model
  - Requirements & scope
  - Costs (realistic)/savings
  - Contingency Plan
  - Assumptions/Constraint
  - Obstacles
  - Metrics – OLAs, SLAs, Cost, Schedule, Other

- Go/No-Go
  - Communicate decision to stakeholders

- RFP
  - Preparation
  - Narrow the field - RFI, RFQ
  - Invitation to Vendors
    - Vendor briefings
    - Site visits
    - Vendor proposals

- Evaluation & Selection
  - Multidisciplinary team
  - Qualitative & quantitative evaluation criteria
  - Cultural match/bench strength
  - Due Diligence
  - Final selection

- Contract Negotiation/Signing
  - It takes two to tango
  - Contract types
    - Fixed price (well defined)
    - Time & material (not well defined)
    - Cost & fixed fee
    - Cost & variable fee
    - Unit price contract
  - Terms & Conditions
  - Governance and Escalation

- Governance, Contract Management & Performance Monitoring
  - Assure compliance with project or service objectives, scope, schedule, & deliverables
  - Measure and evaluate delivered work
  - Vendor governance and reporting
  - Integrate vendor tasks and deliverables into Project or Operations
  - Assign Senior Manager/Director/VP to manage vendor relationship with "clout" (Level should be in proportion to criticality, visibility and & value of initiative)

- Disengagement Options and Re-In-sourcing Decision
  - Options (Outsource with another vendor or In-source)
    - Triggers and Conditions
    - Ownership – Assets, Licenses, etc.
    - Transition Roles, Responsibilities and Plan
    - People
### A Case Study – Textron and AT&T

**Outsourcing**

<table>
<thead>
<tr>
<th>The Deal: AT&amp;T to upgrade, expand and manage Textron’s global communications infrastructure that services the company’s 30 business units globally.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Value: $1.1 billion over 10 years (1996-2006)</td>
</tr>
<tr>
<td>Value Proposition: “Textron must be able to deploy telecommunications technology cost-effectively across the entire enterprise.” William Gauld, VP &amp; CIO, Textron</td>
</tr>
<tr>
<td>Textron: $10+ Billion in revenues; 50,000 +employees who operate in 24 time zones in 130 countries and conduct business 24/7.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>What AT&amp;T Brings to Textron</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Ability to build a global network in a compressed time frame and manage the network effectively</td>
</tr>
<tr>
<td>• Infrastructure to provide full service networking management and technology expertise on a global basis</td>
</tr>
<tr>
<td>• Alliance and partner relationships with most PTTs in many countries</td>
</tr>
<tr>
<td>• AT&amp;T Program Manager and team on site at Textron</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Textron Corporate Objectives:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Aggressive growth via acquisitions and new product development (product and innovation centric)</td>
</tr>
<tr>
<td>• Global expansion and diversity</td>
</tr>
<tr>
<td>• Productivity enhancement and agility</td>
</tr>
<tr>
<td>• Operational excellence (cost-centric)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Benefits of Outsourcing to Textron:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Ability to scale easily and meet the demand for growth of the business</td>
</tr>
<tr>
<td>• Reduce Operating cost – over $125Million in 10 years</td>
</tr>
<tr>
<td>• Ability to implement new technologies efficiently and effectively</td>
</tr>
<tr>
<td>• Clause in contract allowed Textron to re-evaluate deal every three years.</td>
</tr>
</tbody>
</table>

### A Case Study – Textron and AT&T

**Outsourcing**

<table>
<thead>
<tr>
<th>AT&amp;T to Perform the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Acquire and consolidate Textron’s current network (and transition 35 employees to AT&amp;T)</td>
</tr>
<tr>
<td>• Optimize current service levels</td>
</tr>
<tr>
<td>• Manage and optimize Textron’s network (voice, data and video)</td>
</tr>
<tr>
<td>• Design and deploy a next-generation network platform on a global basis</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Lessons Learned:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Develop strong customer/vendor relationship model</td>
</tr>
<tr>
<td>- Open and honest communications</td>
</tr>
<tr>
<td>- Formal and informal status and performance reviews</td>
</tr>
<tr>
<td>• Allow for realistic time and schedule to transition to outsourcing vendor (business unit by business unit)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Select SLA’s for AT&amp;T:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Response time of help desk</td>
</tr>
<tr>
<td>• Network Availability</td>
</tr>
<tr>
<td>• Accuracy and timing of billing</td>
</tr>
<tr>
<td>• Meeting scheduled due dates</td>
</tr>
<tr>
<td>• 3 year re-evaluation of contract’s overall performance</td>
</tr>
</tbody>
</table>
Summary

- Assure that the deliverables and expectations are clearly defined and agreed
- Strong relationship management and stress open communication
- Stress the urgency of meeting deadlines, communicating delays and checking back frequently to assure targets are met
- Spend time on planning, requirements and scope (get right people involved)
- Clarify governance and escalation process with clearly defined roles and responsibilities
- In case of divorce, develop a disengagement plan
- Security and confidentiality safeguards
- Avoid de-skilling (Do not outsource all of your expertise)
- Risk management and change management are imperative
- Contract with a primary and secondary vendor (Do not put all of your eggs in one basket)
- Balance between on-shore and off-shore

Outsourcing is Hard!

Performance Management

7.0 Performance Management, Management Controls and Risk Mitigation

- Those that keep score, know they are winning and have the necessary information to maintain the lead.
- Those that keep score, know they are losing but have the information they need to change direction,
- Those that don’t keep score truly don’t know their position and may be beyond help.
Objectives

• Understand the issues, constraints and opportunities involved in improving performance management, risk management and management controls as components of IT Governance

• Identify the critical success factors and their related key performance indicators that support the governance objectives of better business/IT alignment, higher IT investment and performance returns and better and more sustainable compliant

• Illustrate various KPIs that can be used to monitor the effectiveness of IT and its major components

• Discuss how the COBIT framework can be used to establish IT management controls

A Framework for IT Performance Management, Analysis, Control and Reporting - Organizational Levels and Groups Served

Key Components for Performance Management, Compliance and Reporting Include: IT Enterprise Strategy, Enterprise Compliance, Lifecycle and Quality and Organizational Reporting

- Establish a baseline framework for measurement, reporting and control
- Optimize controls and related processes
- Integrate financial and KPI reporting and internal control processes
- Redirect efforts from risk aversion to risk intelligence
- Enhance market competitiveness
- Reduce the cost of compliance & certification
- Appoint owners to each component and link results with reward system

A well-designed sustain framework based on industry standards and guidelines can help create more consistency for performance and compliance management and controls.
Principles for Achieving Performance Management Excellence

- Identify critical success factors for the business and IT and identify the key performance indicators linked to factors
- Build key performance indicators into your performance evaluation system, starting at the top and permeating to all positions that can influence those KPIs
- Make KPIs relevant, simple, comparable, easy to report and focused on goals and objectives
- Define and issue a management control policy and related procedures, which identify all of the areas requiring management controls
- Monitor, audit and assure that IT operates in accordance with the approved Management Controls
- Develop a risk management and mitigation plan, policy and process

What Key Performance Indicators Should be Tracked?

- Revenues/ Costs/ Profits
- Headcount
- People Skills, Competencies, Certifications and Learning
- Workload/Availability/Capacity/Quality
- Speed & Innovation
- Alignment
- Technology Absorption Rate
- Organization Agility and
- Process Innovation and Continuous Improvement
- Program/Project Management Execution
- Service Level and Management
- Integration and Synergy
- Customer, Employee and Management Satisfaction
- ++++

You get what you measure, so it is critical to measure the right things.
The Balanced Scorecard

Identifies what companies should measure to translate their vision and strategy into actions.

---

CSFs for IT and Key Performance Indicators

What Key Performance Indicators Should Be Tracked for IT?
The CSFs and KPIs are best determined by the current environment, objectives and strategies of an organization. They must be measurable, comparable & reportable.

- **Critical Success Factor (CSFs) Categories:**
  - Financial
  - Customer
  - Employee
  - Process & Product Innovation
  - Program/Project Innovation
  - Service Level Innovation

- **Key Performance Indicators (KPIs):**
  - Financial
  - Customer – Internal & External
  - Performance – Team & Individual
  - Program/Project Mgt.
  - Skills/Competencies
  - Service availability & readiness

- **Attributes:**
  - Performance (Historic)
    - Time
    - Cost – Reduction, Containment & Avoidance
    - Profitability – Direct or Indirect
    - Responsiveness
    - Quality
    - Availability
    - Capacity
    - Reliability
  - Predictive (Future)
    - Maturity Level
    - Capability/Skills
    - Alignment
    - Key Issues
    - Major Risks
    - Customer Satisfaction

Reality Check – Do the CSFs and KPIs...

- Translate into specific actions?
- Help align business and IT?
- Provide leverage to institute change?
- Manage end-to-end results across silos?
- Drive performance and process improvements?
- Allow for benchmarking to compare best practice performance?
- Enhance your ability to compete in the future?
- Drive learning and innovation?
- Predictors of Future Poor Performance?
Select Balanced Score Card Metrics for Business & IT Governance

Should Link Critical Success Factors (CSFs) to Key Performance Indicators (KPI’s) for business and IT (Illustrative Example)

Balanced Score Card – Key Performance Measures - Business
• **Financial** (including compliance) – revenue & profit growth, budgets/expenses, ROA, ROI, NPV, cost reduction, laws and regulations, etc.
• **Strategic/Customer** - new product/service development, intellectual property, asset management, portfolio valuation, customer satisfaction, process and/or technology innovation and transformation, improvement in employee and organizational skills and maturity, etc.
• **Business Processes** – process and quality improvements in sales and marketing, productivity, regulatory compliance, human resources, operations, engineering, manufacturing, customer service, IT, purchasing, vendor management, etc.
• **Learning and Growth** – people development, education, training, certification, job rotation, mentoring, etc.

Balanced Score Card – Key Performance Indicators - Information Technology*
• **Customer (User) Satisfaction** – ownership, commitment, involvement, part of team, level of service
• **Employee Satisfaction/People Development** – training, certification, productivity, turnover
• **Program/Project Management Process*** – time/schedule, budget/cost, deliverables, scope, quality, resources, number of risks, number of changes, key issues, earned value, % of rework, etc.
• **Service (Operations) Process*** – service levels, uptime, service delivery, reliability, redundancy, availability, problem reporting and control, scalability, backup & disaster recovery plans, mean time to repair, response times, amount of errors and rework, etc.
• **Financials** – revenue and profit growth, cost reduction & self funding, budgets/actuals/variances, ROI, Payback, NPV, cost per IT customer, % of IT budget to revenue
• **Strategic** – competitive positioning, business value, alignment, differentiation through technology, growth, etc.

* (Note: For each category, more granular metrics are available, depending what needs to be measured)

Performance Management

High Level IT Metrics Included in a Financial Services Enterprise Balanced Scorecard* As Part of Executive Performance Reviews (Illustrative Example)

Financial:
• IT Spending/Company FTE (Full Time Employees)
• IT Spending/Company Revenue
• Keep-the-Lights On Spending/Company FTE

Non-Financial:
• IT Employee Turnover
• Quality of Management Index (Measures IT worker satisfaction with IT management)
• Engaged Employee Index (Measures IT worker motivation)
• Risk Mitigation Index (Measures degree of risk mitigation actions)

Note: Numerous intra-IT project and service level metrics are used as well.

</table>
## IT Governance

### Most Common Metrics
- Key applications and systems availability
- Help-desk first-call resolution rate

### User-Centric Operational Performance
- Average number of incidents per user per month (average number of times end user experiences global desktop availability outages per month)
- Consistently available and reliable IT services to users
- Rate of failure incidents impacting business

### Network and Systems Performance
- Print server availability
- All critical systems and infrastructure have viable business continuity plans
- System/application database maintained with more than 95 percent accuracy
- E-mail transmit less than 20 seconds (all regions)
- Monthly average of network availability consistently more than 99.5 percent
- Monthly average of critical systems availability consistently above 99.5 percent
- Mean time to repair for all client outages less than two hours
- Network uptime
- PC/laptop hardware fix or replacement within 48 hours
- Total cost of ownership of identified products and services compared to industry standards

### Information Security
- Percent of systems compliant with IT security standards
- Number and type of security incidents time to respond and resolve security incidents

### IT Vendor Management
- IT contract cost ($)
- IT contract cost as a % of IT spend
- IT project completion (on time, within budget)
- SLA performance (%)
- Customer satisfaction index (%)

### Help-Desk Performance
- Mean time to repair for all network and desktop outages
- Mean time to repair for all application systems outages less than four hours
- Percentage of infrastructure service requests closed within service level agreements

### Operational Strategy Adoption
- Completion of service transformation with minimum business disruption
- All announced changes completed within advertised downtime window
- Percentage of IT architectural plans approved, reviewed, and accepted by business
- Number of applications used by more than one line of business
- Percentage of desktop PC standardized
- End-to-end availability for customer service
- IT effectiveness in resource allocation supporting business objectives
- Identify and manage strategic alliances with IT partners
- Decrease average development cost by 10 percent

### IT HR Skills Management
- Employee morale/satisfaction
- Overall IT staff retention and attrition rate

### Training and Personal Development
- Percentage of performance assessment and development plans delivered to employees
- Percentage of employees with mentors
- Percentage of employees with individual development plans
- Percentage of individual training objectives met
- Employee “business knowledge” survey performance
- Percentage of managers trained in employee motivation
- Percentage of staff with appropriate measures for their personal goals
- Share of IT training spent in business units
- Number of IT person-hours spent at industry events
- Number of training hours per employee per quarter

### Marketing/PR - Related Metrics
- Number of awards won by company for use of IT
- Competitiveness of current employment offer versus industry
- Citation of IT organization in press
### Customer Satisfaction

#### Most Common Metrics

<table>
<thead>
<tr>
<th>Survey Questions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Customer satisfaction survey – quarterly or semi-annually</td>
</tr>
<tr>
<td>Overall business executive satisfaction rating</td>
</tr>
</tbody>
</table>

#### Surveys

Perceived versus actual price competitiveness of IT services
Perceived ability to deliver technical/business solutions and services
Quality of communication about available services and new technologies
Help-desk client satisfaction—percent dissatisfied
Contribution to business process improvement and innovation
Contribution to business value creation
Contribution to corporate business strategy

---

### A Scoreboard Analysis of Compaq – Objective

- **Financial Objectives**
  - Earnings growth ≥ 50%
  - Revenue growth ≥ 30%
  - Gross volume growth ≥ 30%
  - Making last deal
  - Inventory turns ≥ 15
  - ROE ≥ 21%
  - ROA = 12%

- **Market expansion**
  - New market segments
  - Customer satisfaction

- **Customer Results**
  - Aggressive pricing, lead industry
  - Expand markets with new products or configurations
  - Establish integrated, name, increased market share to almost 20% U.S. market
  - Improve relationships with VARS

- **Business Innovation Process**
  - Under $1000 PCs
  - Products preconfigured, Windows
  - Supply chain integration
  - Global production optimization

- **Business Processes**
  - Lower operating costs
  - Improved service
  - Improved access
  - Designed to lower prices
  - New product capabilities
  - Better service programs

- **Learning & Growth**
  - Partnerships – e.g., suppliers, retailers
  - Acquisitions
  - Incentive programs
  - SAP and global enterprise systems
  - Use of Internet

- **Quality Improvements**
  - Improved coordination
  - Integrated information

---
A Governance Schedule should be issued annually Identifying the Key Deliverables, Reports, Review Meetings, etc.

**Strategic & Operational Plans & Budgets (Capital & Expense)**

**Weekly**
- Projects Status Report (milestones/issues)
- Operations Status Project
- Technical Exchange Group
- Staff Meetings
- Weekly Activity/Status Report to Management

**Bi-Weekly/Monthly**
- Project Status Reviews (Financials, Schedule)
- Monthly Management Report
- Multiple Dash Boards (Top 10 Projects + Key Service SLA's) – Green, Amber, Red Report

**Bi-Monthly/Quarterly**
- Executive Steering/Governance Board Reviews

**Semi-Annual/Annual**
- State of IT Report Card
- Performance Reviews

**Select Examples - Key Performance Indicators, Dash Boards and Tool Outputs**

- While each IT governance module in this workshop provided examples of KPIs that measure a specific component, the following slide illustrate additional examples of relevant KPIs in select areas:
  - Alignment
  - Program/Project Investment Management
  - IT Service Management & Delivery
  - Financial and Asset Management

- There are numerous software tools that enable enterprises to collect, record, analyze, track and report KPIs relating to each IT Governance areas, but none thus far, that address all of the areas. Several vendors are working on tools that address the enterprise governance processes.

The bottom line for each organization is to define, track and enforce those KPIs that measure the CSFs and objectives and are relevant to the performance management practices and compensation incentives of their enterprises.
COBIT, previously described in Module 2 provides a reference framework to identify and develop the appropriate management control and audit policies and procedures for an organization. Some assumptions to consider:

- Many management controls apply to all IT organizations
- Some management controls may be unique and applicable to only specific organizations based on regulatory, legal, environmental and other factors
- Management controls should be focused on improving compliance, audit-ability, traceability and integrity
- The 34 COBIT process areas identify the areas that should be prioritized and for which management controls should be established and maintained
COBIT IT Processes by Domain

By addressing these 34 high-level control objectives, the business process owner can ensure that an adequate control system is provided for the IT environment.
Risk Management Process Flow Schematic

Outlines the Flow of the Risk Management and Mitigation Process

Risk Management & Mitigation

Definition:

Risk analysis is the systematic identification of potential areas of project uncertainty or concern. There are three primary aspects of risk management to be considered:

- Risk identification and analysis
- Risk quantification
- Risk response & contingency plan development

Guidelines for identifying and analyzing risk:

Isolate potential risks in each of the following areas:

Schedule:

- Tasks on the critical path
- Tasks having several predecessors
- Tasks that have minimal float
- Optimistically estimated tasks
- Tasks reliant on external dependencies, such as vendor deliverables
- Major milestones
- Unforeseen events (a key employee quits)

Resources:

- Tasks with an individual
- Tasks with many people assigned
- Tasks using scarce resources
- Tasks with technology, facilities & outsourcing vendors

Performance Management
Risk Management & Mitigation (Cont’d.)

Business/Service Continuity:
- Disruption of business processes
- Disruption of IT service
- Lack of disaster prevention/recovery plans

Budget:
- Uncertainty of corporate budgeting
- Shifts in corporate budget priorities
- Uncertain resource costs or availability

Scope
- Dynamics of customer requirements
- Availability of tools and/or techniques
- Large number of quality defects
- Competitor actions
- Vendor deliverables, quality, timelines, service levels, financial viability, etc.

For each risk, ask these questions, then assign a value of high, medium, or low:
- What are the possible triggers for these risks?
- What is the probability ($ or time) this risk will occur?
- What would be the impact on the project if this risk should occur?
- What can be done to mitigate the risk (e.g., avoid, mitigate, contingency)

For risks with high rankings for either impact or probability, develop contingency plan by:
- Developing authorized revisions to the schedule, resource assignments, or scope
- Developing alternative actions, contingency plans and disaster recovery plans

Risk Assessment Matrix – Used to quantify risks and suggests areas that should have contingency plans (High risk areas are denoted in RED)

<table>
<thead>
<tr>
<th>Risk Exposure Key</th>
<th>Criteria</th>
<th>Risk Impact ( R_i )</th>
</tr>
</thead>
<tbody>
<tr>
<td>Highest ( R_e = 15-20 ) Contingency Plan Required</td>
<td>Hazard  Unrecoverable impact to environment, system, and/or personnel health and/or</td>
<td>Major damage impact to environment, system, and/or personnel health and/or</td>
</tr>
<tr>
<td>High ( R_e = 9-12 ) Contingency Plan Highly Recommended</td>
<td>Schedule Unachievable and/or</td>
<td>Serious delay (( &gt;30% ) late) and/or</td>
</tr>
<tr>
<td>Medium ( R_e = 4-8 ) Contingency Plan Discretionary</td>
<td>Cost Major budget overrun (( &gt;50% )) and/or</td>
<td>Serious budget overrun (30%-50%) and/or</td>
</tr>
<tr>
<td>Low ( R_e = 1-3 ) Contingency Plan Not Required</td>
<td>Support Unsupportable systems and/or</td>
<td>Major delays in systems modifications and/or</td>
</tr>
<tr>
<td>Risk Exposure ( R_i = R_e \times R_p )</td>
<td>Performance Non-achievement of technical performance</td>
<td>Significant degradation of technical performance</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Risk Probability ( R_e )</th>
<th>▼ Value( (R_e) ) ▼</th>
<th>Catastrophic (4)</th>
<th>Critical (3)</th>
<th>Marginal (2)</th>
<th>Negligible (1)</th>
</tr>
</thead>
<tbody>
<tr>
<td>81%-99% Probability of Happening</td>
<td>Near Certain (5)</td>
<td>20</td>
<td>15</td>
<td>10</td>
<td>5</td>
</tr>
<tr>
<td>61%-80% Probability of Happening</td>
<td>Probable (4)</td>
<td>16</td>
<td>12</td>
<td>8</td>
<td>4</td>
</tr>
<tr>
<td>41%-60% Probability of Happening</td>
<td>Possible (3)</td>
<td>12</td>
<td>9</td>
<td>6</td>
<td>3</td>
</tr>
<tr>
<td>21%-40% Probability of Happening</td>
<td>Marginal (2)</td>
<td>8</td>
<td>6</td>
<td>4</td>
<td>2</td>
</tr>
</tbody>
</table>
• For each contingency plan, specify the circumstances that would trigger that plan into action.

**Preventative Plan(s):**
- Mitigate
- Avoid
- Acceptance
- Transfer

**Contingency Plan(s):**
- Business continuity
- IT continuity

**Trigger Point(s):**

<table>
<thead>
<tr>
<th>Probability</th>
<th>Impact</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hi=3; Med=2; Low=1</td>
<td>Hi=6; Med=4; Low=4</td>
<td>Score=</td>
</tr>
</tbody>
</table>

**High Risk Situation**

**Probable Causes**

<table>
<thead>
<tr>
<th>Probability</th>
<th>Impact</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hi=3; Med=2; Low=1</td>
<td>Hi=6; Med=4; Low=4</td>
<td>Score=</td>
</tr>
</tbody>
</table>

- The Contingency Plan responds to Risk Situation
- The Preventative Plan responds to the Probable Cause(s)

## Business/IT Continuity Plan and Checklist Outline

1.0 Preparing the Plan
2.0 Initiating the BCPP Project
2.1 Project Initiation Tasks
2.1.1 Review of Existing BCPP
2.1.2 Benefits of Developing a BCPP (Value Proposition and Marketing)
2.1.3 BCPP Policy Statement
2.1.4 Decision Authority and Approvals
2.1.5 Communications Plan
2.2 Project Organization
2.2.1 Charter – Objectives, Timetable, Budget, Deliverables, Scope, Authorization
2.2.2 Appoint Project Manager and Team
2.2.3 Reporting Requirements and Metrics
3.0 Assessing Business Risk and Impact of Potential Threats and Emergencies
3.1 Threat Assessment
3.1.1 Environmental Disasters
3.1.2 Terrorist or Other Deliberate Disruptions
3.1.3 Loss of External Services – Supplies, Utilities, Raw Material
3.1.4 Equipment or System or Information Technology Failures
3.1.5 Serious Security Breaches
3.1.6 Other Emergencies
3.2 Business Risk Assessment
3.2.1 Major Business Processes and Locations
3.2.2 Assess Financial and Operational Impact
3.2.3 Determine Time Outage Impacts
3.2.4 Key Business Executives/Personnel and Contact Information
3.3 Information Technology
3.3.1 Determine Business and IT Dependencies
3.3.2 Major IT Systems, Networks and Data
3.3.3 Key IT Personnel and Contact Information
3.3.4 Key IT Vendors and Facilities
3.3.5 IT Recovery Policies and Procedures
3.4 Current Emergency Policies and Procedures
3.4.1 Summary of Current Policies, Procedures and Responsibilities for Handling Emergencies
3.4.2 Key Personnel and Contact Information for Business Recovery Organization (BRO), Escalation and Delegation of Authority
3.4.3 External Emergency Services and Contact Information
3.4.4 Building, Power, Information, Vital Records Backup
4.0 Preparing for a Possible Emergency
4.1. Emergency Response Procedures
4.2 Command, Control and Emergency Operations Center (Crisis Management)
4.2.1 Organization Chart
4.2.2 Key Personnel and Emergency Contact Information
4.2.3 Key Vendors and Suppliers and Emergency Contact Information
4.2.4 Manpower Recovery Strategy
4.2.5 Establish the Disaster Recovery Team
4.2.6 Establish the Business Recovery Team
### Business/IT Continuity Plan and Checklist Outline (Cont’d)

<table>
<thead>
<tr>
<th>4.3 Emergency Response Linkage to Business Recovery</th>
<th>5.2.5 Business Recovery Tasks</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.3.1 Alternative Business Process Strategy</td>

</tr>
</tbody>
</table>

### Performance Management

### Risk Response & Mitigation Plan Development (Cont’d)

**Responses to Risk generally fit into one of the following categories:**

- **Avoidance** - eliminate the risk by eliminating the cause
- **Mitigation** - reduce the monetary value of the risk by reducing the probability, impact or both
- **Acceptance** - simply accept the consequences

**There are several responses to potential risks:**

- **Outsourcing/Procurement** - get additional products/services from outside
- **Contingency Planning** - define action steps that will be taken in the event the risk event occurs, and estimating the costs associated with that action
- **Alternative Strategies** - consider changing the approach
- **Insurance** - may protect against financial losses associated with certain types of risk
Enabling Technologies to Improve IT Governance

Select Technology Software Solution Attributes Necessary to Support IT Governance And Its Major Components

- **Demand and Customer Relationship Management** – process requests, work flow, authorization, accommodate multiple designations (discretionary, mandatory and/or strategic; planned or unplanned; new, enhancements, maintenance and/or keep the lights on), etc.
- **Portfolio Management** – investment & alignment evaluation criteria, rankings vis-à-vis alternatives, priorities, approval, tracking, etc.
- **Work Flow and Process Management and Tracking and Authorization** - processes, phases and templates (imbedded and/or custom designed), go/no go gates, etc.
- **Planning**
  - Link initiatives and track to strategic/tactical/capital/budget plans and initiatives
  - What if alternative analysis
  - Work Breakdown Structure - work package management
  - Task List
  - Organization Breakdown Structure
  - Estimating and budgeting
  - Resource loading
  - Scheduling – multiple techniques

- **Program and Project Life Cycle Support** – Phases, templates, reviews, authorization, progress tracking and reporting; required to be updated and accessible at multiple levels; ability to link tasks to related tasks and/or projects and/or programs and record and/or report on multiple key performance indicators – budget, schedule and actuals with variance reporting, status of deliverables, current period, prior period, next period projections, year to date, inception to date, base lining and re-base lining comparisons, etc.

- **Asset Management** – inventory of assets, $ value, utilization, aging, depreciation, asset refresh planning, asset retirement and disposal tracking, etc.
- **Configuration Management** - asset functions, features, costs, location, protocols supported, version and release control, etc.
- **Resource Management** – skills inventory, labor rates, labor hours, facilities, inventory, forecasting, level loading, etc.
- **Cost Management** – labor rates, procurement rates, committed costs, overhead rates, budget versus actual by labor or procurement category for this period, last period, year to date, inception to date, cost at completion, by product/service, etc.
- **Time Management** – from lowest level (activity or tasks) to highest level (project or program), time reporting, budget versus actual by labor or procurement category, etc.
- **Product/Service Catalogue** – list of standard repetitive IT product and service solutions offered by IT with pricing and estimated deployment time, etc.
- **Financial Management** – support capital and expense budgets, cost management, budget and forecasts, accommodate multiple base lines and changes, etc.
- **Performance Management** – support and reporting of multiple balanced scorecard metrics - planning, project, operational and service performance dashboards, continuity management, etc.
- **Service Level Management and Support** – incident and problem reporting, tracking and resolution; help desk support; capacity and availability planning and forecasting; usage based tracking, charge backs and cost allocation, quality control, security, etc.
- **Procurement, Vendor, Outsourcing Management** – Link to vendor governance and reporting, contract management, license tracking, metrics, escalation, etc.
Enabling Technologies to Improve IT Governance

Select Technology Software Solution Attributes Necessary to Support IT Governance And Its Major Components

- **Compliance Management** – documentation, traceability, secure third party access, audit support, etc.
- **Communications Management** – manage expectations of customers and constituents - types and frequency of reports, graphs, comparisons, method and frequency of communications supported (e-mail, web-casts, formal reviews, other)
- **Change Management** – templates, process, recording, reporting, authorization, original base line and re-base line tracking, version control, etc.
- **Release Management** – ensure that all aspects of a new or revised release (e.g. hardware, software, documentations, checklists and rollouts) are coordinated and approved by the impacted constituents (e.g. development, operations, client, sponsor, etc.)
- **Issues and Problem Management** – tracking, reporting and resolution
- **Security** – access control and authorization data base, etc.
- **Best Practice Knowledge Management** – maintain a data base of internal and external IT governance best practices and continuous improvement ideas and innovations; enable access for select constituents, etc.

---

Service Life Cycle Management Processes Supported by Tools
(Illustrative Example)

**Demand Management**
- Define and publish services
- Self-service user request catalog
- Represent SLAs and costs

**Service Costing**
- Usage-based chargeback (invoicing) or cost allocation
- Credits for SLA violations
- Role-based decision support

**Incident/Problem Management**
- Integrated service desk
- Decision-support for service desk optimization
- Centralized knowledge base

**Service Level Management**
- Define and track negotiated business service levels
- Prioritize service activities based on SLA impact

**Enterprise Change Management**
- Software and operational change
- Standardize and automate IT process workflow

Source: CA
**Asset Management Processes Supported by Tools** (Illustrative Example)

### Asset Inventory and Tracking
- Understand inventory and usage
- Provide detailed history of changes

### Financial Management
- Budget and forecast
- Procurement to retirement

### Contract Management
- Manage leases
- Insight into TCO to support negotiation

### Configuration Management
- Update software and apply patches
- Support migration and standardization efforts
- Deploy and provision systems

### Software License Management
- Meet true-up requirements
- Discover over- and under-utilized licenses

### Process Management
- Create templates, graphical workflows and best practice methodologies
- Report on process compliance

### Resource Management
- Catalog, assess and search skills
- Plan future capacity by role

### Project Management
- Create estimates, budgets and forecasts
- Track deliverables and progress against milestones
- Manage issues and risks

### Time and Cost Accounting
- Account for actual project costs
- Allocate and charge-back project work

Source: CA
### Environment & Drivers
- Annual revenue range -2004 - $3.0 to $6.0 Billion
- Number of IT personnel range – 500 – 800
- Major compliance issues with former executive management team (replaced by new executive management team focused on transformation and re-invigorating growth)
- Former IT organization was reactive, lethargic and slow to address business needs
- Lack of formalized IT policies, practices and disciplines
- New CIO reports to CEO and is part of the senior executive management team
- Fragmented business processes

### Issues and/or Opportunities
- Poor IT governance, reporting and inadequate business intelligence – requires a cultural change
- Poor IT customer satisfaction and unmet business needs caused business units to ramp up their own systems development functions
- Inadequate and inappropriate IT skills, competencies and leadership
- Challenge – Drive business process transform business for growth and greater profitability using IT
- Self fund (through cost reduction programs) IT budget growth for new initiatives & keeping the lights on
- Lack of business intelligence (multiple sources of inaccurate business information)

### Approach
- New executive management team hired a new CIO, who brought in a new senior leadership team in IT
- Reconstituted Business/IT Executive Steering Group which developed a strategy & priorities focused on: business growth, creating a performance based culture that rewards achievement of goals, accountability and innovation and building strong customer partnerships
- CIO developed a transformation plan which was approved by executive management team
- IT reorganized with following major functions:
  - IT Strategy and Governance (includes PMO, PR/Marketing & People Development)
  - Application Development
  - IT Operations & Infrastructure
  - Enterprise Architecture

### Results – Alignment
- Business/IT Executive Steering Committee (consisting of “C” level executives) are closely coordinated strategy, direction, priorities, investments and periodically review progress on major IT/business transformation initiatives
- Business strategic and operating plans drive IT plans
- IT is in process of developing and deploying a pragmatic strategy and governance policy and process for the organization and re-centralizing IT development based on an improved relationships service with the business units

### Results - IT Service Management & Delivery
- ITIL is being deployed on a phased basis to improve customer service, satisfaction and related metrics (e.g. SLA, response and repair time to reported problems and outages, etc.)

### Results - Program/Project Management
- An IT PMO is being established using the Nikku software tool for Portfolio Management, Project Management, Time Reporting and Resource Management
- Folks being hired into the IT PMO Center of Excellence are or will be certified via Six Sigma and/or PMI’s PMP
- Demand Management (IT Requests for Service) will be reviewed in a consistent and uniform manner based select critical success factors and associated metrics in two categories – Discretionary and Non-Discretionary (Mandatory)

### Results - Performance Management
- IT is in the process of identifying key performance indicators to measure its effectiveness and progress
Critical Success Factors
- To transform a culture and use IT to enable that transformation mandates the sponsorship and commitment of the CEO and the executive management team
- Hire select competent business and IT leaders who bring in external experiences and success and who are not part of the old guard

Lessons Learned
- Conduct an assessment of current state of IT maturity against best practice companies and industry standards
- Develop a plan and roadmap for transformation to a desired future state
- Assign adequate resource to deploy a successful transition
- Make sure that you have the right talent to do the job

Summary
- Align IT objectives, strategies and initiatives with the customer and develop a set of Critical Success Factors required to meet those objectives – then build Key Performance Indicators to measure performance and monitor improvement and progress or issues toward goals.
- Develop and evolve measurement systems into tools that prepare, predict and prescribe solutions to meet current and future challenges
- Identify and prioritize the IT management control policies and procedures to facilitate compliance, traceability, audit-ability, honesty, security, privacy and control
- Assure that high risk situations are identified and mitigated
- Make sure that the reward and compensation structure is linked to continuous improvement performance management programs:
  - Provide a link between outcomes and organizational objectives
  - Work to communicate the impact of improvements to all of the stakeholders
8.0 Summary, Lessons Learned, Critical Success Factors & Next Steps

IT is an integral part of the business, therefore IT governance must be an integral part of enterprise governance.

On Survival:

For to win one hundred victories in one hundred battles is not the Acme of skill. To subdue the enemy without fighting is the Acme of skill.

Sun Tzu
The Art of War
Oxford University Press, 1971

Steps in Making the IT Governance Real and Sustainable

- Must have a corporate mandate from the top: the Board and the Executive Leadership Team are committed to implementing and sustaining a robust Governance environment.
- Must have dedicated and available resources: identify Executive Champion and Multi-Disciplinary Team (to focus on each IT Governance component).
- Do Homework – Educate yourself on past, current and emerging best practices.
- Market the benefits and communicate the IT governance value proposition to the organization.
- Develop a tailored IT governance framework and roadmap for your organization based on current and emerging industry best practices.
- Assess the “current state” of the level IT governance maturity (decompose into its major components), using a leading industry best practice framework such as CMMI.
Steps in Making the IT Governance Real and Sustainable (Cont’d)

• Develop a “future state” IT governance blueprint (where you want to be) & keep it in focus

• Decompose the IT Governance components into well defined work packages & assign an owner and champion to each process component

• Develop an IT Governance action plan, identify deliverables, establish priorities, milestones & allocate resources

• Sponsor organizational and individual certifications in the IT Governance component areas, where they are available (e.g. PMP, ITIL, IT Security, IT Audit, BCP, Outsourcing, etc.)

• Identify enabling technologies to support the IT Governance initiatives

• Establish a “Web Portal” to access IT Governance policies, processes, information and communication wins

• Plan for and sustain IT governance process improvements and link to a reward structure. Create a “Continuous IT Governance Improvement group to sustain the framework

Lessons Learned and Critical Success Factors

Lessons Learned

• Don’t focus on specific ROI as a measure of success

• Use TCO (Total Cost of Operations) and business innovation and transformation metrics such as TBR (Total Benefits Realized) as measures of organizational improvement (Need current environment baseline compared to future projected baseline).

• For select well defined projects, ROI may be OK.
Critical Success Factors

- IT must work with business leaders to define the right set of CSF’s and metrics to reflect and measure the business performance of IT
- Clearly define the roles and responsibilities for IT governance, authority and decision making for IT and the business (no ambiguity).
- IT needs a consistent and rigorous method of reporting performance both throughout the IT function and to business management (it must be meaningful, comparable and easily measurable)
- IT must establish and enforce (make it part of the performance management system) consistent, but flexible policies and processes for all of the components of governance (e.g. alignment, programs, projects, products, services, infrastructure, architecture, etc.)
- IT organizations that want to build and sustain higher levels of business impact, effectiveness and compliance will implement “continuous improvement programs,” based current and emerging best practices, standards and guidelines and endorse individual and organizational certifications

Critical Success Factors (Cont’d)

- Create the right environment and culture (See Appendix for a Change Acceleration Framework)
- Get the right people involved with the right attitude for each governance component
- Focus fast
- Select and deploy automated tools to support the governance processes
- Create an IT Governance Center of Excellence
Lessons Learned and Critical Success Factors

Develop a Personal Action Plan & Next Steps

Based on the lessons learned, the critical success factors identified in the workshop and your own experience:

• Identify your and your organizations' strengths & limitations
• List and prioritize the gaps in the processes, skills, techniques and tools you and your organization wants and needs to develop and/or update
• Define your and your organizations' action plan for next steps:
  ‣ Create awareness and commitment to action
  ‣ Develop a plan with milestones and metrics
  ‣ Use, as appropriate, inside/outside subject matter experts to fill the gaps and facilitate organizational change and transformation
  ‣ Institute continuous learning and education – Improve your skills, competencies and knowledge of the relevant standards, processes, tools, techniques, etc.
  ‣ Institute continuous process improvement based on current and emerging best practices

GOOD LUCK!

F. Leadership:

Appendix 1: Managing Accelerating Change and Transformation

Success at large scale transformational change demand more than plans and processes – It requires an intimate understanding of the human side, as well as the organization’s culture, values, people and behaviors that must be changed to deliver the desired results.

Booz Allen and Hamilton
Nine Principles for Creating and Sustaining Change

• Address the human side of change systematically

• Change starts at the top and happens at multiple levels – top, middle and bottom through proactive change agents

• Confront reality and articulate a compelling need for change

• Provide a vision and roadmap to guide behavior and decision rights

• Create ownership and distributed leadership (change agents at multiple levels)

• Frequent and honest communications on why, what, how and results

• Assess the cultural landscape early at all levels

• Prepare for the unexpected – Be flexible and listen with an open mind

Key Components of Managing Large Scale Change Successfully

• Engage the Top and Lead the Change
  - Create the “Value Proposition” & Market the Case for Change
  - Committed Leadership
  - Develop a Plan and Ensure Consequence Management

• Cascade Down and Across the Organization & Break Down Barriers/Silos
  - Create Cross-Functional and Global Teams (where appropriate)
  - Compete on “Speed”
  - Ensure a Performance Driven Approach

• Mobilize the Organization and Create Ownership
  - Role Out Change Initiative
  - Measure Results of Change (Pre-Change versus Post-Change Baselines
  - Embrace Continuous Learning, Knowledge and Best Practice Sharing

• Attributes of Effective Change Teams and Agents
  - Strong and focused Leader
  - Credibility and Authority (Charter) to Lead the Initiative
  - “Chutzpa”, Persistent and Change Zealots
  - Ability to Demonstrate and Communicate “Early Wins” to build the momentum
  - Create a Sense of Urgency and Avoid Stagnation
  - Knock Obstacles Out of the Way, Diplomatically or Otherwise
Appendix 1: Managing Accelerating Change and Transformation

**Critical Success Enablers for Managing Change, Accelerating Change and Cultural Transformation** – are segmented into the following categories:

- Change Acceleration Framework – Overall pre-requisites for effecting accelerating change and transformation
  - People/Organization Architecture and Management Philosophy
  - Process Transformation
  - Technology

“It is better to be 80% correct & make change happen than to be 100% correct after the opportunity has passed”

Norman Augustine
Former Chairman & CEO, Lockheed Martin Corp.

Framework for Managing Accelerating Change and Transformation

Used to Help Organization Transition from the Current Environment to a Future Environment

**Leading Change:**
– Is there a strong change leadership team (CLT) and champion? Knowledgeable in the model and tools?
– Is the CLT actively involved in leading and driving the change process and initiatives?
– Are CLT members monitoring all “essential elements” and “necessary conditions”?

-------------A Framework for Managing Change -------------------------------

### Creating Shared Need:
– Is the reason to change, whether driven by threat or opportunity, instilled within organization?
  – Is it widely shared through data, demonstration, demand or diagnosis?
  – Does the need for change exceed its resistance?

### Shaping Vision:
– Is the desired outcome of change clear, and legitimate?
  – Is the outcome expressed in simple terms?
  – Is it widely understood and shared?

### Making Commitment:
– Is there a strong commitment from all key constituents to invest in the change, make it work, and demand and receive management attention?

### Making Change Endure:
– Once the change is started, can we implement it on a sustained basis?
  – Are the results transferred throughout the organization?
  – Are there rewards and recognition Linked to change progress? Other motivators?

### Monitoring Progress & Learning:
– Do we know our real progress?
– Have benchmarks and metrics been set to guarantee accountability?
– Has organization feedback and learning been captured?

**Changing Systems, Structures & Capabilities:**
– Is change woven into the very fabric of the organization?
– Are management practices used to complement and reinforce change?
– How have we addressed issues of: staffing & development, measurements & rewards?
– Is there a communication strategy?
– Do we know how the organizational structure must be changed?
Leadership Competency Model (Illustrative Example)

The Leadership Competency Model represents a blend of models developed by select leading edge organizations such as Verizon, Motorola, Proctor and Gamble, GE and Others.

### Leadership
- Collaborate
- Visionary
- Change Agent
- Interpersonal Relations & Skills
- Communications
- Mentoring
- Diversity
- Risk Taker
- Integrity

### Market/Customer Focus
- Customer Focus/VOC
- Business/Industry Insight
- Entrepreneurial/Intrapreneural Orientation
- Environmental Trends & Implications
- Relationship Building

### Critical Thinking
- Financial Acumen
- Life Long Learning
- Creativity & Innovation
- Adaptability
- Problem Solving
- Decision Making/ Judgment
- Analytical
- Conceptual

### Achieving Results & Execution
- Quality Focus
- Leveraging Technology
- Improve Processes
- Change Management
- Take Initiative
- Decisiveness
- Stress Management
- Performance Management
- Common Sense
- Flawless Execution

### Functional Expertise*
- Marketing
- Operations
- HR
- IT/PM/BA/Tech.
- R&D/Engineer.
- Public Affairs
- Cust. Service
- Treasury
- International
- Sales
- Finance/Account.
- Product Dev./Mgt

Summary of Operating Characteristics Present in World Class Teams

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clear Purpose</td>
<td>The vision, mission, goal or task of the team has been defined and is now accepted by everyone. There is an action plan.</td>
</tr>
<tr>
<td>Informality</td>
<td>The climate tends to be informal, comfortable, and relaxed. There are no obvious tensions or signs of boredom.</td>
</tr>
<tr>
<td>Participation</td>
<td>There is much discussion and everyone is encouraged to participate.</td>
</tr>
<tr>
<td>Listening</td>
<td>The members use effective listening techniques such as questioning, paraphrasing and summarizing to get ideas out.</td>
</tr>
<tr>
<td>Civilized Disagreement</td>
<td>There is disagreement, but the team is comfortable with this and shows no signs of avoiding, smoothing over, or suppressing conflict.</td>
</tr>
<tr>
<td>Consensus and Fast Decisions</td>
<td>For important decisions, the goal is substantial but not necessarily unanimous agreement through open discussion of everyone’s ideas, avoidance of formal voting, or easy compromises. It is also important to avoid or minimize “groupthink” which often limits individual creativity and may sub-optimize the team’s actions.</td>
</tr>
<tr>
<td>Open communication</td>
<td>Team members feel free to express their feelings on the tasks as well as on the group’s operation. There are few hidden agendas. Communication takes place outside of meetings.</td>
</tr>
<tr>
<td>Clear Roles and Work Assignments</td>
<td>There are clear expectations about roles played by each team member. When action is taken, clear assignments are made, accepted and carried out. Work is fairly distributed among members.</td>
</tr>
<tr>
<td>Shared Leadership</td>
<td>While the team has a formal leader, leadership functions shift from time to time depending upon the circumstances, the needs of the group, and the skills of the members. The former leader models the appropriate behavior and helps establish positive norms.</td>
</tr>
<tr>
<td>External Relations</td>
<td>The team spends time developing key outside relationships, mobilizing resources, and building credibility with important players in other parts of the organization.</td>
</tr>
<tr>
<td>Style and Cultural Diversity</td>
<td>The team has a broad spectrum of team-player types representing different cultures including members who emphasize attention to task, goal setting, focus on process and questions about how the team is functioning.</td>
</tr>
<tr>
<td>Self-Assessment</td>
<td>Periodically, the team steps back to examine how well it is functioning, examines what may be interfering with its effectiveness and takes corrective actions.</td>
</tr>
<tr>
<td>Use of Technology</td>
<td>Organizations are creating “global centers of excellence” to take advantage of global brains. This has accelerated the use of technology to save time, costs and facilitate collaboration amongst multi-location team members.</td>
</tr>
</tbody>
</table>
Appendix 1: Managing Change and Transformation

People/Organization Architecture & Philosophy

- Obtain executive sponsorship and champion(s) – Need “Leadership” at highest levels

- Get the right people involved at the right time (phases)
  - Know the skills and competencies of your people
  - Develop and maintain a current database
  - Define roles and responsibilities
  - Co-location

- Create peer pressure that forces behavior change based on:
  - Value propositions
  - Speed
  - Acceptable attitude about taking prudent risks and making mistakes (learn from them)
  - Balance risk with appropriate reward
  - Define optimum individual performance objectives & measure progress:
    - Energy
    - Energize
    - Edge
    - Execution

-------------------------------------

Ethics
Excellence – “Be All That You Can Be”

Appendix 1: Managing Change and Transformation

People/Organization Architecture (cont’d)

- Set bold cycle time reduction objectives –
  - Establish current state base line
  - Establish future state baseline
  - Define transitional approach
  - Time sensitive performance metrics and vital signs

- Embrace speed and excellence
  - Establish “speed” incentives and rewards (balance with quality, risk and customer involvement)
  - Incentivize employees to challenge the norms (think and do out-of-the box; dare to be different)
  - Recognize people and teams for a superior job
  - Continuous reinforcement of a job well done
  - Make decisions locally and in real time

- Create “speed” teams
  - Fast teams have strong leaders (well trained)
  - Keep team focused
  - Knock obstacles out of the way or neutralize them
  - Best-in-class talent
  - Establish ultra-clear priorities, roles and responsibilities
  - Reduce/eliminate job fragmentation (do what you do best – do not sub-optimize)
  - Fast electronic communications (24 by 7) –Cell, Teleconferencing, Videoconferencing
  - Make fast adjustments
  - Leapfrog & compete on speed
  - Act within the spirit of the process (not strictly by the process)
  - Rotate “high potential team members” (at end of project) as change agents (to other initiatives) and incent them
  - Leverage the same Project Manager across similar type projects
Appendix 1: Managing Change and Transformation

People/Organization Architecture (cont’d)

• Conduct **fast team meetings**
  - Do your homework
  - Don’t mind your manners
  - Stand up meetings make meetings short (no coffee or doughnuts)
  - Focus fast and keep focused
  - Encourage fast follow up
  - Make fast work out of peripheral issues
  - Bump up, not down (for meeting attendees)
  - Stand up meeting speed things up
  - Turn off cell phones
  - No side conversation – listen when someone else is talking

• Create **flatter, smaller and nimbler organizations based on effective teams**
  - Increase span of control – virtual organization with access to **global brains**
  - Change fast
  - Multifunctional and team based
  - Work on **building effective teams** – Forming, Storming, Norming and Performing
  - Real-time communication amongst team members

---

Appendix 1: Managing Change and Transformation

People/Organization Architecture (cont’d)

• **70/30% Decision Process** – it is an attitude about how sure you have to be to make a decision that provides permission to speed things up by not working harder, but smarter:

  - Complete consensus not required
  - **Time box scope and deliverables**
  - Use your judgment and previous experience – **odds are you are right**
  - Set time constraints on decisions
  - Make decisions and then move on - no rehash
  - Mistakes are acceptable – **but fix them fast**
  - Frequent customer validations
  - Take informed risks – **no pain, no gain**
  - Encourage continuous improvement
  - Learn how much you need to engage others to be 70% certain of your decision
  - Learn how much information is required to be 70% certain of your decision
  - Champion the 70% solution
  - Less stress
  - Encourage all to support and commit – it’s an attitude that affects behavior change

**A good decision today is better than a perfect decision tomorrow**
People/Organization Architecture (cont’d)

- Create and sustain a **continuous learning** environment:
  - Know skills sets of employees (**skills database**)
  - Establish minimum competencies for various positions
  - Know gaps
  - Encourage personal development, education and training programs and subsidize
  - Invest in continuous education and training (set minimum requirements per employee per year)
  - Design training and education offerings to fit “speed” criteria (e.g. Webcasts, Video Conferencing, 3 hour focused modules, etc.)
  - Encourage regular (senior to junior) and reverse (junior to senior) mentoring programs
  - Establish **Knowledge Management** process to capture and access **Lessons learned**

- **Best practice benchmarking:**
  - Form peer (external) group to share best practices
  - Continuously monitor, improve and adopt
  - Ensure that the organization develops as a learning system

Process Transformation

- Develop **scalable, flexible and tailored** (80/20 rule, preferable Web based) **IT Governance processes and architecture for its major components** (including Alignment, Planning, Project Management, IT Service Management, Outsourcing, Systems Development, Infrastructure Development, Product Development, Performance Management, etc.), **Processes, Templates and Tools**.

- Define **Mandatory (Minimum) and Discretionary** Phases, Components, Templates, Procedures, etc.
  - Accommodate multiple **project, product, systems and service types** (e.g. new, enhancements, operational software, infrastructure, product, etc.) & **complexity** - size/value/reach/integration/funding/ location/risk, etc.
  - Accommodate multiple development methodologies (e.g. Waterfall, Iterative, Rapid Application Development, Hybrid, etc.)
  - Accommodate **outsourcing/insourcing/hybrid models**
  - Accommodate **fast track and full risk mitigation** projects.

- Define Business Process Models (How the business should operate), streamline and automate.
Appendix 1: Managing Change and Transformation

Process (cont’d)

Establish and enforce a well defined/uniform governance process with simple clear metrics, reporting guidelines and escalation processes:

- Clear roles and responsibilities
- Issues management
- Change management
- Employ multiple communications techniques and frequencies (especially prior to due dates for deliverables, milestones, meetings, etc- 60 day, 30 day, 15 day, 7, day, 2 day, 1 day reminder notices)
- Use dashboards and graphs (color coded) to convey successes and show laggards
- Escalate sooner than later

• Institute a Portfolio Management process –formalize the selection, prioritization and funding of initiatives based on business criteria
  - Reprioritize active projects on an on-going basis
  - Do not classify each project as a priority

• Time Box Scope
  - Smallest and clearest scope possible
  - Decompose large initiatives into programs and/or interrelated projects with time boxing
  - Chunk scope into time slots (no individual initiative exceeds 3 months, but interrelated projects can be longer as a group)

• Time Box Deliverables
  - Short term incremental deliverables (80 hour rule)
  - Frequent iterations with constituencies, customer(s), team, etc.
  - Acceptance criteria

• Outsource (non-core initiatives or tasks, domestically or internationally) with a limited number of qualified (and certified) vendors
  - Have a vendor selection and RFP process in place
  - Have a vendor management, escalation. and metrics process in place

• Create knowledge management cafes and repositories (capture intellectual capital for reuse)
  - Lessons learned, best of breed processes, training for junior and senior folks
  - Leverage process experience to create templates, etc. for reuse
Appendix 1: Managing Change and Transformation

Technology

- Encourage collaborative tools (Share documents, Central Repository for Projects, Groupware, etc.)
- Automate, automate, automate – Web and sub-webs, tools, templates, PM software, lessons learned repository, knowledge management,
- Easy to use, easy to locate
- Use expert systems and knowledge management to capture and re-use best practices and change poor practices
- Fast electronic communications (24 by 7)
